INITIAL STUDY

1. Project Title:

   1950-1960 East Grand Avenue Project

2. Lead Agency Name/Address:

   City of El Segundo
   350 Main Street
   El Segundo, CA 90245

3. Contact Person and Phone Number:

   Paul Samaras, AICP, Principal Planner
   (310) 524-2340

4. Project Location:

   The Project site is located at 1950 and 1960 East Grand Avenue, in the north-central portion of the City of El Segundo, Los Angeles County, California. The rectangular site, which consists of two parcels, is located on the south side of East Grand Avenue approximately 500 feet east of Pacific Coast Highway (California State Route 1) and approximately 500 feet west of Continental Boulevard, with East El Segundo Boulevard forming the southern boundary of the block approximately 500 feet south of the site. The Project site is located approximately 1.8 miles south of Los Angeles International Airport (LAX) and 2 miles east of the Pacific Ocean. Regional access to the Project site is provided via Pacific Coast Highway; Interstate 405 (San Diego Freeway), approximately 1.3 miles east of the Project site; and Interstate 105 (Glen Anderson Freeway), approximately 0.8 miles to the north. The site is approximately 0.3 miles and 0.4 miles west of the LA Metro C (Green) Line's Nash/Grand station and El Segundo/Nash station, respectively.

   Los Angeles County Assessor's Parcel Numbers (APN): The Project site comprises two contiguous parcels located at 1950 and 1960 East Grand Avenue with APNs 4138-007-065 and 4138-007-066, respectively.

   Lot Size: Two lots, comprising approximately 233,922 square feet (5.37 acres).

   Figures: Figure 1 shows the location of the Project site in the region, and Figure 2 shows the Project site and surrounding areas in its local context.

   Site Description: The Project site is rectangular shaped and consist of two parcels (1950 and 1960 East Grand Avenue). The property is currently improved with a 12-story office building with a height of 162 feet at 1960 East Grand Avenue, and an 11-level parking structure (with 2 subterranean levels and 9 above-grade levels) at a height of 110 feet with 819 parking spaces, at 1950 East Grand Avenue. In addition to the parking structure, the site contains 98 surface parking spaces: 79 spaces in a parking lot on the north side of the 11-level parking structure, 16 spaces across the frontage of both parcels adjacent to East Grand Avenue, and 3 spaces on the east side of the 12-story office building. The remainder of the site is improved with drive aisles, landscaped/amenity space, and a meandering walking path.

Figure 3 depicts the existing conditions on the Project site. Figure 4 shows the proposed new 5-story office building and new 4-level parking structure and site changes along with the existing 12-story office building and 11-level parking structure that would remain. No changes are proposed for the existing building and parking structure, with the exception of minor, non-structural alterations to the existing parking structure to accommodate a pedestrian bridge from the structure to the new building to be located at 1950 E Grand.

5. Project **Applicant's Name and Address:**

Artisan Ventures LLC
3000 Olympic Boulevard, Suite 1255
Santa Monica, CA 90404

6. General Plan Designation:

Corporate Office

7. Zoning:

Corporate Office (CO)

8. Proposed Project Description:

Overview

The proposed Project includes the construction of a new 5-story commercial office building (4-story with mezzanine) and a new 23-space surface parking lot at 1950 East Grand Avenue, and a 4-level, 258-space parking structure at 1960 East Grand Avenue. The new office building would be located at the front of the parcel and would replace the surface parking spaces. The new building would be located in front of the existing 11-level parking structure. The new 23-space parking lot would be located directly east of the existing parking structure, at the rear of the parcel at 1950 East Grand Avenue. The proposed 4-level parking structure would be constructed directly behind the existing 12-story, 233,799-square-foot office building located at 1960 East Grand Avenue and would replace a landscaped area with a few tables and benches. Refer to Figure 3 showing the location of the existing and proposed structures. No modifications are proposed for the existing 12-story office building at 1960 East Grand Avenue and the 11-level parking structure at 1950 East Grand Avenue, with the exception of minor modifications to accommodate a pedestrian bridge connecting the third floor of the new office building to the 11-level parking structure. The three surface parking spaces located on the eastern side of the existing office building parallel to the drive aisle would remain.

A new central plaza area would be developed between the new office and existing office buildings. The plaza would include outdoor seating areas with trellis structures defining the seating areas. Landscape materials would include a variety of drought-tolerant native and climate-adapted species that would provide shade and seasonal color. The Project would also include a Master Sign Program for the proposed site signage, which include exterior building wall signs and two monument signs proposed along the Grand Avenue street frontage (one sign per parcel) that are 16 feet in height. Refer to Figure 4 for the site layout and Appendix A for the Preliminary Project Site Plan package.

Parcel 1 (1950 East Grand Avenue)

The proposed office building would have a contemporary design constructed with a rough sawn board form of concrete and use of architectural glass (Viracon or equivalent quality material) on all façades of the building, and accentuated with small patios and terraces. A roof deck at the rear of the building (third floor) would have a perforated metal trellis structure. The building would have a metal paneled standing seam roof. Building accents include black-painted concrete sections, perforated metal panels, corrugated metal panel roof screens, wood-look aluminum (Knotwood or equivalent quality material), and the use of folding door systems (Nanawall or equivalent quality material). Refer to Figure 5 showing the conceptual perspective views of the proposed building.

The building would have a height of 96 feet, 5 inches, which is within the Corporate Office (CO) zone maximum height limit of 200 feet. The building would be 105,469 gross square feet and have 93,559 net square feet. Refer to Figures 6 and 7 showing the north, south, east, and west exterior elevations. The CO zone allows a maximum floor area ratio (FAR) of 0.8:1, which equates to a maximum of 93,568 square feet of net floor area; therefore, the FAR for Parcel 1 would be 0.8:1, and within the allowable CO zone FAR.

The ground floor uses include a 1,962-square-foot ground floor lobby area, a 2,319-square-foot gym (for tenant use only) with a 775-square-foot outdoor patio area, a 1,324-square-foot café/deli (including kitchen and back of house area), and two tenant spaces. The remainder of the building would be occupied with office uses. The proposed office building would have a 34-foot setback from the frontage along Grand Avenue and 41-foot 10-inch setback from the western property line, which would exceed the required 10-foot setback distance.

The building design includes a private outdoor area for each tenant that is only accessible from the tenant space. The first-floor tenants would have patio areas between 263 and 347 square feet in size, and the other floors would have terraces up to 1,315 square feet in size. Additionally, a 4,081-square-foot rooftop terrace amenity would be accessible to the fifth-floor tenant. The rooftop terrace would be used primarily as a passive open space area with the flexibility to be used for occasional tenant events.

The proposed parking at 1950 East Grand Avenue would include a total of 842 parking spaces. As mentioned, the existing parking structure contains 819 parking spaces and has 9 levels above grade with 2 subterranean levels. The 87 surface parking spaces at 1950 East Grand Avenue would be demolished to construct the new office building. A new 23-space surface parking lot would be added to the 1950 East Grand Avenue parcel directly east of the existing 11-level parking structure; however, this lot is accessible through the proposed parking structure at 1960 East Grand (discussed below). The site would also be developed with new enhanced landscaping areas with a wide pedestrian-oriented terraced entry.

Two new small truck loading spaces would be added on the west side of the new office building toward the rear, screened from view of Grand Avenue, to provide the required loading spaces for the new office building.

Parcel 2 (1960 East Grand Avenue)

The proposed development also includes the construction of a 4-level, 258-space parking structure at 1960 East Grand Avenue, directly behind the existing 12-story, 233,799-square-foot (gross floor area) office building. This proposed structure would have a partially open

design constructed of painted concrete with the use of accent elements such as perforated metal panels and black-painted stairwells. Infilled sections of the facades of the new concrete parking structure would have a similar coloring as the concrete structure. Refer to Figure 8 showing the conceptual perspective views of the proposed parking structure.

The parking structure would have a height of 58.25 feet and the existing 12-story office building is 162 feet in height, which are both within the allowable height limit (maximum height of 200 feet) of the CO zone. There are 11 existing surface parking spaces. The eight parking spaces located along the front of the office building will be demolished. The three parking spaces that will remain are located on the eastern side of the office building. The proposed parking structure would be designed with a required 10-foot setback from the eastern and southern property boundaries.

Parcel 2 is allowed a maximum of 93,568 square feet of net floor area based upon the current maximum FAR allowed in the CO zone. However, the existing 12-story building, which was approved under Environmental Assessment EA-012 on July 12, 1984, was built in 1986-87 with a FAR of 1.99:1, under a different zoning district designation ("Special Commercial (C-3) Zone") which had a maximum FAR of 2.0:1. The City has since reduced the FAR to 0.8:1, and the building is now legally nonconforming as to FAR. Since the proposed new 5-level parking structure does not contribute floor area, as defined in the El Segundo Municipal Code (ESMC §15-1-6, Definitions, and no alterations are proposed for this structure, the Project would not expand the nonconforming status of "Floor Area [Net]") and the property.

Outdoor Gathering Space and Landscaping

As mentioned, the new and existing office buildings would be complemented by a large outdoor landscaped plaza with seating, associated trellis structures, and fireplaces in several locations throughout the plaza. The plaza would have a drought-tolerant Mediterranean plant palette with a diverse variety of species of shrubs, groundcovers, grasses, and trees. Larger specimen trees are proposed to accentuate the central plaza and front setback areas.

Site hardscape materials in the plaza area include enhanced paving with precast pavers and wood decking in the outdoor seating areas. The outdoor seating areas would have perforated metal trellis structures. The plaster walls would be made of cast-in-place concrete. Vehicular circulation areas have been kept at the perimeter of the campus and the fire lane has been integrated in the hardscape/landscape design for an uninterrupted pedestrian flow within the plaza areas.

Additionally, stepped landscape planters and seating have been utilized to accommodate grade differences along the site frontage and within the central plaza. Seventy-four trees of varying species would be provided throughout the property with a variety of sizes in compliance with ESMC requirements. Refer to Figure 9 showing the landscaping and planting plan for the plaza area and overall site landscaping.

Access, Circulation, and Parking

No new curb cuts are proposed along Grand Avenue. There are two existing curb cuts on Grand Avenue that would remain and provide driveway access to the existing 11-level parking structure, the new 4-level parking structure, the new 23-space surface parking lot,

and other on-site surface parking and loading spaces. One driveway is located on the west side of the location for the new 4-story building and the other driveway is located on the east side of the existing 12-story office building.

Both drive aisles/driveways allow two-way access. However, because there is a median along Grand Avenue, the western driveway is limited to right turn in and right turn out movements. The eastern driveway allows both right and left turn out movements as there is a break in the median directly aligned with the eastern driveway.

The driveways and drive aisle also provide access for emergency vehicle purposes as it is an existing fire lane. The existing fire lane currently is broken into two segments. One segment connects the western driveway to the existing parking structure at the rear of the parcel at 1950 East Grand Avenue. The other segment runs south from the eastern driveway, parallel to the eastern side of the existing building at 1960 East Grand Avenue, and wraps around the back of the building, connecting across the property line boundary to the parking structure on the 1950 East Grand Avenue property. The design of the two fire lane segments would be modified so that an additional segment connects the two segments together between the office buildings and the parking structures.

The Project would provide a total of 1,103 parking spaces combined for both parcels. The existing 12-story, 233,799-square-foot office building is required to provide 614 parking spaces, and the proposed 4-story, 93,559-square-foot office building would be required to provide 263 parking spaces, making a total combined requirement of 877 parking spaces. There would be a net total of 226 parking spaces in excess of the zoning code requirements, all of which would be provided at 1950 East Grand Avenue, where the new office building is proposed.

Virtually all of the 614 parking spaces required for the existing office building at 1960 East Grand Avenue (except for the existing 11 on-site parking spaces) have been provided off-site at 1950 East Grand Avenue in the 11-level parking structure since the office building at 1960 East Grand Avenue was built in 1987. The number of off-site parking spaces needed would be reduced as a result of the construction of the proposed new 4-level, 258-space parking structure on the 1960 East Grand Avenue parcel. A parking covenant would be provided for 353 off-site spaces that would still be needed (as 8 of the existing 11 on-site parking spaces would be removed). The Project approval would include a condition to allow reciprocal parking and ingress/egress and require an access easement across both parcels.

Loading Space

The existing 12-story building at 1960 East Grand Avenue has one existing truck loading space and 2 existing small truck loading spaces. The new 5-story building at 1950 East Grand Avenue will include two small truck loading spaces to comply with ESMC requirements for the new 93,559-net-square-foot office building.

A minimum of 56 bicycle spaces total for both sites combined would be provided in compliance with ESMC and California Green Building Standards Code (CalGreen) requirements.

Signs

The Project would include a Master Sign Program for the proposed site signage and exterior building wall signs. As part of the Master Sign Program, two monument signs are proposed along the Grand Avenue street frontage (one sign per parcel) that are 16 feet in height.

Construction and Grading Activities

The existing site is relatively flat with gentle sloping generally in a southeast direction. Modest grade changes would be made to the existing site so that the slope design has proper drainage for the proposed Project, considering the potential effects of high rainfall, private sewage systems, landscaping irrigation, and possible runoff from both on-site and adjacent development, in compliance with the ESMC and all applicable laws.

Construction of the proposed Project is anticipated to occur in one phase over an approximately 17$^1/_2$-month period, beginning approximately 12 months following approval of discretionary actions. The construction stages consist of approximately 4 weeks of site preparation (removal of vegetation, hardscape, and surface parking lot); grading for 7 weeks; building construction for 60 weeks (14 months); and architectural coating for 2 weeks, which overlaps with building construction. In addition to earthwork and installation of site improvements, construction activities would include connections to existing water, sewer, storm drainage, natural gas, an emergency generator to power critical systems in the new building and parking structure in the event of a power shortage, 2,500 kilovolt amps (kva) transformer, and electrical distribution facilities located on-site. The Project would require an estimated 9,720 cubic yards of cut and 1,600 cubic yards of fill, resulting in a net 8,120 cubic yards of export. Consistent with the City's Noise Ordinance, construction would occur Monday through Saturday between the hours of 7:00 a.m. and 6:00 p.m.

9. Surrounding Land Uses and Setting:

The Project site is located on a large block comprising two different commercial zoning districts (Corporate Office [CO] and the 199 North Continental Boulevard Specific Plan), which generally include a mix of office, hotel, and restaurant uses. Specifically, the surrounding area includes the following land uses:

North: The north side of Grand Avenue, bounded by Pacific Coast Highway to the west and Continental Boulevard to the east, contains office, hotel, and restaurant uses. Three multistory, multitenant buildings with office uses are located directly across Grand Avenue to the north with two additional smaller buildings with restaurant uses to the west of those buildings along the east side of Pacific Coast Highway. The Mattel Design Center is located directly across Grand Avenue, immediately east of the multitenant office buildings. The Doubletree by Hilton LAX-El Segundo Hotel and the Mattel corporate headquarters are east of the Mattel Design Center and northeast of the subject site. These land uses north of the Project site are all zoned CO in the City's zoning code.

East: One three-story office building is located directly to the east and adjacent to the subject property that has street frontage on both Grand Avenue and Continental Boulevard. This office building is located in the CO zone.

South: Additional multistory office buildings are located on the same block to the east and southeast. The property immediately south of the existing 12-story office

building at 1960 East Grand Avenue is the site of the Cambria Hotel and a 2-story parking structure to the east of the hotel, both with access from Continental Boulevard. A large surface parking lot serves the multistory, multitenant office building at the northwest corner of El Segundo Boulevard and Continental Boulevard. The Cambria Hotel is located within the 199 North Continental Boulevard Specific Plan. All other properties on the same block are located in the CO zone. Further south on the next block (south side of El Segundo Boulevard) is the Raytheon corporate campus.

West: The Pacific Corporate Towers office development is located directly to the west of the Project site. This development is composed of three office buildings and two parking structures and encompasses the entire eastern side of Pacific Coast Highway on the block bounded by Grand Avenue to the north and East El Segundo Boulevard to the south. The Pacific Corporate Towers office development is located in the CO zone.

10. Required Approvals:

The City of El Segundo is the lead agency for the Project and has sole discretionary land use authority over the Project proposal. To implement this Project, the following approvals are required:

- Environmental Assessment (EA 1291) for the new, approximately 93,559-net-square-foot, 5-story (4-story with a mezzanine level), new 4-level parking structure, and new 23-space surface parking lot.
- Site Plan Review (SPR 20-03) for a new commercial development that includes structures which have a combined gross floor area of more than 50,000 square feet (pursuant to ESMC Section 15-30-2).
- Off-site parking covenant and agreement (MISC 20-01) for 353 parking spaces for the existing 12-story office building at 1960 East Grand Avenue to be provided in the existing 11-level, 819-space parking structure at 1950 East Grand Avenue (reduction from existing 603 off-site parking spaces).
- Reciprocal access agreement for drive aisles and fire lane.
- Administrative Use Permit (AUP 20-03) to approve the Master Sign Program, which includes two 16-foot-tall monument signs.

11. Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or particular agreement):

This Initial Study is intended to address all approvals necessary to construct and operate the proposed Project. No discretionary public agency approvals are known to be required for the Project, other than those required by the City of El Segundo.

12. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, has consultation begun?

One tribe has requested to be notified of projects in the City of El Segundo, the Gabrieleño Band of Mission Indians – Kizh Nation. Initial consultation began on May 18, 2021. Please

refer to the response to Checklist Item 18 for information regarding the consultation process with the Gabrieleño Band of Mission Indians – Kizh Nation.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Land Use and Planning	☐ Mineral Resources	☐ Aesthetics
☐ Population and Housing	☐ Hazards and Hazardous Materials	☐ Cultural Resources
☐ Geology and Soils	☐ Noise	☐ Recreation
☐ Hydrology and Water Quality	☐ Public Services	☐ Greenhouse Gas Emissions
☐ Air Quality	☐ Utilities and Service Systems	☐ Tribal Cultural Resources
☐ Transportation/Traffic	☐ Agriculture and Forest Resources	☐ Mandatory Findings of Significance
☐ Biological Resources		

EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect is significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Potentially Significant Unless Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The lead agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section 17, Earlier Analysis, may be cross-referenced).

5) Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration, Section 15063(c)(3)(D). Earlier analyses are discussed in Section 19, at the end of the checklist, if utilized.

DETERMINATION:

On the basis of this initial evaluation:

☐ I find that the project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that, although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the project. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a significant effect(s) on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on earlier analysis as described on attached sheets, if the effect is a "potentially significant impact" or "potentially significant unless mitigated." An ENVIRONMENTAL IMPACT REPORT is required but must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because all potentially significant effect (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed on the proposed project.

Title: Principal Planner

1. AESTHETICS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☐	☒
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c. In non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	☐	☒
d. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Pursuant to Senate Bill (SB) 743 (Public Resources Code [PRC] Section 21099(d)), "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." PRC Section 21099 defines an "employment center project" as "a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area." PRC Section 21099 defines a "transit priority area" as an area within 0.5 miles of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program or applicable regional transportation plan." PRC Section 21064.3 defines "major transit stop" as a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods. PRC Section 21099 defines an infill site as a lot located within an "urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses." The proposed Project is an employment center project (located in the CO zone with an FAR of 0.8:1 on Parcel 1 and 1.99:1 on Parcel 2), located on an infill site (previously developed), and within a transit priority area (within 0.5 miles of two major transit stops, 0.3 miles and 0.4 miles west of the LA Metro C (Green) Line's Nash/Grand station and El Segundo/Nash station, respectively). As such, the Project's aesthetic impacts shall not be considered a significant impact on the environment and the following aesthetics analysis is provided for informational purposes only.

Explanation of Checklist Responses

1.a) A scenic vista is generally considered a publicly accessible, prominent vantage point that provides expansive views of highly valued landscapes or prominent visual

elements. As described in the General Plan,[1] the City is located within the urbanized Los Angeles area and is considered part of the Los Angeles International Airport (LAX)/South Bay subregion at the southwestern edge of the Los Angeles coastal basin (Figure 1). The Project vicinity includes LAX and I-105 approximately 0.8 miles to the north, the Hyperion Sewage Treatment Plant 1.8 miles directly west along the Pacific Ocean coast, the Chevron Refinery 0.3 miles to the southwest, and the 405 freeway 1.3 miles to the east (Figure 2). The Project site is located in a predominantly urbanized area of the City, with a mix of office, hotel, and restaurant uses. The El Segundo General Plan Exhibit C-10 (Master Plan of Streets) identifies Grand Avenue as a secondary arterial and El Segundo Boulevard, the street south of the Project site, as a major arterial in an area of the City which consists of and is surrounded by urban and developed land (Figure 3). There are no scenic vistas as defined above or identified by the General Plan in the Project area. Further, there are no unique cultural or topographic features that offer a distinctive and enhanced visual setting which is recognized for its scenic vista qualities. Therefore, the Project would have no impact on a scenic vista or view.

1.b) The Project site is not located within a designated state scenic highway.[2] Further, the Project site is not visible from the designated scenic highways nearest to the site, which consist of a portion of Route 91 in Orange County and a portion of Route 27 in Topanga Canyon of Los Angeles County.[3] The Project site is located approximately 500 feet east of the Pacific Coast Highway, which includes portions identified as eligible State Scenic Highway segments; however, the Project site is not located near the eligible portions, the nearest being in Santa Monica, near Route 187 (Venice Boulevard), approximately 11 miles north.[4] As a result, the site is not be visible from the designated or eligible scenic highways. Further, there are no unique cultural, biological, or geographic features on-site that would be considered a scenic resource. Therefore, Project would have no impact to scenic resources within a state scenic highway.

1.c) As mentioned previously, the Project site is located within an urban area with a variety of urban land uses such as commercial hotel, restaurant, and office land uses. The proposed office use would be consistent with the property's Corporate Office (CO) zoning classification, and the Project would comply with the CO zoning design standards under ESMC Article D, Corporate Office (CO) zone, pertaining to building height and bulk, landscaping, yards, signs and outdoor lighting. No other regulations governing scenic quality are applicable to the Project. In summary, the Project would result in no impact involving conflicts with zoning standards.

A project is generally considered to have a significant visual/aesthetic impact if it substantially changes the character of an area such that it becomes visually incompatible or degrades the existing context and quality of the site and its surroundings. The Project site has been developed with the existing office building and parking structure constructed since the 1980s, and an associated parking lot. Landscaping, including a tree, is present along the Project site's Grand Avenue

4 Caltrans (California Department of Transportation). *California State Scenic Highway System Map.* Accessed online at https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa on February 7. 2022.

frontage. The Project area's visual character is defined by low- and mid-rise commercial and office developments. West of the Project site, encompassing the eastern side of Pacific Coast Highway, is an office development with three office buildings and two parking structures. Developments north of the site, across Grand Avenue and bounded by Pacific Coast Highway to the west and Continental Boulevard to the east, are office, hotel, and restaurant uses, including the Mattel Design Center and a DoubleTree by Hilton. To the east of the site is a three-story office building that has frontage on both Grand Avenue and Continental Boulevard. Developments south of the Project site include multistory office buildings, a surface parking lot, and the Cambria Hotel. Figure 3 and Figure 4 show the existing developments at the Project site and the immediate surroundings. The developments in the area consist of a variety of commercial (hotel and restaurant) and office uses that do not exhibit a distinct visual character and there is no uniformity of architectural styles or coherent visual theme.

The Project proposes to demolish the surface parking on the Project site, except for three spaces, construct a new 23-space surface parking lot, and construct a new office building and parking structure along with implementing a cohesive landscaped central plaza. The buildings would be constructed in a contemporary design, as shown in the architectural renderings on Figures 6 and 7. The office building will be constructed with a rough sawn board form of concrete and architectural glass, accentuated with small patios and terraces. The proposed parking structure would have a partially open design constructed of painted concrete with the use of accent elements such as perforated metal panels and black-painted stairwells. The unifying central plaza area would include enhanced paving, seating, trellis structures, fire features, and larger specimen trees.

As described and depicted in the architectural renderings, the Project would develop the existing site with a uniform and coherent architectural design. In summary, the Project would result in no impact on the visual character and visual quality in the Project area.

1.d) Light. The two primary sources of light are those emanating from building interiors that pass-through windows, and light from exterior sources, such as street lighting, parking lot lighting, building illumination, security lighting, and landscape lighting. Depending on the location of the light source and its proximity to adjacent light-sensitive uses, light introduction may become a nuisance, affecting adjacent areas and diminishing the view of the clear night sky. Light spillage is typically defined as unwanted illumination from light fixtures on adjacent properties.

The Project involves the use of interior office lighting that is typical of office use. The lighting may be visible from surrounding areas during the nighttime; however, similar to the existing office lighting, the internal lighting would not be directly outward from the buildings and would not be considered new sources of substantial light.

The Project proposes use of exterior security and safety lighting at entry areas, exit doors, select perimeters areas (i.e., at the north side of the buildings for safety visibility from Grand Avenue), at the roof terrace, and at the parking structure, which will be shielded, low lumen downlighting, and will conform to the minimum required lighting for safety and security in accordance with the 2019 California Building Code (CBC) Title 24, Lighting Guide, which has been adopted by the City . The Project exterior lighting has been designed in accordance with the Project photometric study and lighting datasheets, provided in Appendix B, which indicates no light spillage from the entire

Project property (office building and parking structures). As a result, no light from the Project is expected to spill onto adjacent properties or be a substantial source of light from off-site locations.

Glare. Glare and glint refer to the unwanted reflection of the sun's rays or other forms of light by the face of a reflective surface. Glare is primarily a daytime occurrence caused by the reflection of sunlight or artificial light by highly polished surfaces such as window glass or reflective materials and, to a lesser degree, from broad expanses of light-colored surfaces. Glare can also be produced during evening and nighttime hours by the reflection of artificial light sources such as automobile headlights. Glare generation is typically related to either moving vehicles or sun angles. However, the proposed layout of the Project site and existing buildings prevents glare from causing significant impacts. The parking structures would be positioned to the south of both the existing and proposed office building, preventing glare from impacting adjacent lots to the south. An existing parking structure is present to the west of the Project site, which limits impacts. This parking structure would prevent an observer passing at speed, such as a motorist on East Grand Avenue, from being impacted by a direct reflection of light. Further, as identified in the Landscape Plan (Appendix A), the Project would provide trees along the site's frontage to East Grand Avenue. These trees would prevent glare from impacting motorists, pedestrians, and others to the north of the Project site. Finally, the existing structure to the east of the Project site would prevent the Project from producing glare on the eastern edge of the site. Due to the Project's positioning amongst structures which would shield the site from producing glare and the site design incorporating trees along the East Grand Avenue frontage, the Project would result in a less than significant impact related to light and glare.

2. AGRICULTURE AND FOREST RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding **the state's inventory of forest land, including the Forest** and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to nonagricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Explanation of Checklist Responses

2.a) The Farmland Mapping and Monitoring Program (FMMP) produces maps and statistical data that are used for analyzing impacts on California's agricultural resources. Agricultural land is rated according to soil quality and irrigation status. The maps are updated every two years with the use of a computer mapping system, aerial imagery, public review, and field reconnaissance. The FMMP produces Important Farmland Maps, which are a hybrid of resource quality (soils) and land use information. The Project site is identified as Urban and Built-Up Land,[5] which is defined as land occupied by structures with a building density of at least 1 unit to 1.5 acres, and is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, and other developed purposes.[6]

The Project site is currently developed with an office building and parking structure, and it is located in a fully developed and urbanized area of El Segundo. Further, the site is

5 California Department of Conservation. 2020. *California Important Farmland Finder*.
6 California Department of Conservation. 2020. *California Important Farmland Categories*.

not adjacent to or near any land used for agricultural purposes. The Project site is not designated in the FMMP as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance, and would not involve conversion of Farmland. As such, the Project would result in no impact.

2.b) The Project site and the surrounding area is not zoned for agriculture. Instead, the site is zoned Corporate Office (CO) and surrounding areas area zoned either CO, General Commercial, or Urban Mixed Use, or 199 North Continental Boulevard Specific Plan. None of these zones permit agricultural use and there is no farmland on-site or in the vicinity.[7] The proposed Project would have no impact involving a conflict with zoning for agricultural use. The Project site is not part of a Williamson Act contract or any other sort of deed or land use restrictions intended to preserve or foster agricultural uses; therefore, there would be no impact involving a conflict with such zoning or land restrictions.

2.c) As noted above, the subject property is zoned CO, which is intended to provide for the development of office projects, as stated in ESMC Section 15-5D-1, and has no applicability to forestland or timberland. All surrounding land is fully developed with commercial, office, hotel, and restaurant uses. There is no forest or timberland on or near the Project site. Therefore, there would be no impact involving a conflict with zoning for forest or timberland.

2.d) The Project site has been previously developed with office uses and does not contain any forest land, which under PRC Section 12220, is defined as land that can support 10 percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity. In addition to the existing office and parking structure developments on the Project property, the site also contains an existing landscaped/amenity area at the location of the proposed parking structure. This area has been developed with a walking path, seating areas, pond, and landscaped lawn with ornamental trees, including palm trees, such the previous natural conditions are no longer present. The Project site has been fully developed and is surrounded by areas similarly developed with commercial, office, hotel, and restaurant uses. There is no forest land or timberland on or near the Project site and the Project does not involve conversion of such land. Therefore, the Project would not cause the conversion of forest land to non-forest use, and would result in no impact.

2.e) The Project site is currently developed with an office building, surface parking, and a parking structure. There are no agricultural or forest uses in the vicinity. Therefore, the Project would not involve changes in the existing environment that could result in conversion of Farmland to nonagricultural use or the conversion of forestland to non-forest use. As such, there would be no impact.

7 El Segundo Municipal Code, Title 15, Chapter 5, Article C and Article D.

3. AIR QUALITY

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	☒	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

The following analysis is based in part on the information contained in *Air Quality, Energy, and Greenhouse Gas Emissions Impact Analysis* prepared by Vista Environmental dated March 20, 2022. This report is included as Appendix C of this IS/MND.

Background

The Project site is within the South Coast Air Basin (SCAB), which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). As the local air quality management agency, the SCAQMD is required to monitor air pollutant levels to ensure that state and federal air quality standards are met and, if they are not met, to develop strategies to meet the standards. The health effects associated with criteria pollutants upon which attainment of state and federal quality standards is measured are described in Table 3-1. Depending on whether the standards are met or exceeded, SCAB is classified as being in attainment or nonattainment, as summarized in Table 3-2.

SCAB is designated as nonattainment for the federal and state 1-hour and 8-hour ozone standards, the state PM_{10} standards, and the federal and state $PM_{2.5}$ standards (see Table 3-1). The Los Angeles County portion of SCAB is also designated as nonattainment for federal lead standards. Thus, SCAB currently exceeds state and federal ambient air quality standards for these pollutants. The SCAQMD is required to implement strategies to reduce pollutant levels to acceptable standards. This nonattainment status is a result of several factors, primarily the naturally adverse meteorological conditions that limit the dispersion and diffusion of pollutants, the limited capacity of the local airshed to eliminate air pollutants, and the number, type, and density of emission sources within SCAB. The SCAQMD has adopted an Air Quality Management Plan (AQMP) that includes a strategy for the attainment of state and federal air quality standards.[8]

8 South Coast Air Quality Management District. 2016. *2016 Air Quality Management Plan*.

Table 3-1. State and Federal Criteria Pollutant Standards

Air Pollutant	Concentration/Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Ozone (O_3)	0.09 ppm/1-hour 0.07 ppm/8-hour	0.070 ppm/8-hour	(a) Pulmonary function decrements and localized lung edema in humans and animals; (b) Risk to public health implied by alterations in pulmonary morphology and host defense in animals; (c) Increased mortality risk; (d) Risk to public health implied by altered connective tissue metabolism and altered pulmonary morphology in animals after long-term exposures and pulmonary function decrements in chronically exposed humans; (e) Vegetation damage; and (f) Property damage.
Carbon Monoxide (CO)	20.0 ppm/1-hour 9.0 ppm/8-hour	35.0 ppm/1-hour 9.0 ppm/8-hour	(a) Aggravation of angina pectoris and other aspects of coronary heart disease; (b) Decreased exercise tolerance in persons with peripheral vascular disease and lung disease; (c) Impairment of central nervous system functions; and (d) Possible increased risk to fetuses.
Nitrogen Dioxide (NO_2)	0.18 ppm/1-hour 0.030 ppm/annual	100 ppb/1-hour 0.053 ppm/annual	(a) Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups; (b) Risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes; and (c) Contribution to atmospheric discoloration.
Sulfur Dioxide (SO_2)	0.25 ppm/1-hour 0.04 ppm/24-hour	75 ppb/1-hour 0.14 ppm/annual	(a) Bronchoconstriction accompanied by symptoms which may include wheezing, shortness of breath and chest tightness, during exercise or physical activity in persons with asthma.
Suspended Particulate Matter (PM_{10})	50 µg/m³/24-hour 20 µg/m³/annual	150 µg/m³/24-hour	(a) Exacerbation of symptoms in sensitive patients with respiratory or cardiovascular disease; (b) Declines in pulmonary function growth in children; and (c) Increased risk of premature death from heart or lung diseases in elderly.
Suspended Particulate Matter ($PM_{2.5}$)	12 µg/m³/annual	35 µg/m³/24-hour 12 µg/m³/annual	
Sulfates	25 µg/m³/24-hour	No Federal Standards	(a) Decrease in ventilatory function; (b) Aggravation of asthmatic symptoms; (c) Aggravation of cardio-pulmonary disease; (d) Vegetation damage; (e) Degradation of visibility; and (f) Property damage.
Lead	1.5 µg/m³/30-day	0.15 µg/m³ /3-month rolling	(a) Learning disabilities; and (b) Impairment of blood formation and nerve conduction.
Visibility Reducing Particles	Extinction coefficient of 0.23 per kilometer - visibility of ten miles or more due to particles when relative humidity is less than 70 percent.	No Federal Standards	Visibility impairment on days when relative humidity is less than 70 percent.

Source: South Coast Air Quality Management District. 2016. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) Attainment Status for South Coast Air Basin.

Explanation of Checklist Responses

3.a) As part of its enforcement responsibilities, the United States Environmental Protection Agency (USEPA) requires each state with nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the California Clean Air Act requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the federal and state ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

As previously mentioned, the Project site is located within SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the federal Clean Air Act, to reduce emissions of criteria pollutants for which SCAB is in nonattainment. In order to reduce such emissions, the SCAQMD prepared the 2016 AQMP, which establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state (California) and national air quality standards. The 2016 AQMP is a regional, multiagency effort including SCAQMD, the California Air Resources Board (CARB), the Southern California Association of Governments (SCAG), and the USEPA. The plan's pollutant control strategies are based on the latest scientific and technical information and planning assumptions, including SCAG's 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), updated emissions inventory methodologies for various source categories, and SCAG's latest growth forecasts. (SCAG's latest growth forecasts were defined in consultation with local governments and with reference to local general plans.) The Project is subject to the SCAQMD's AQMP.

Criteria for determining consistency with the AQMP are defined by the following indicators:

- Consistency Criterion No. 1: Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

- Consistency Criterion No. 2: Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in Appendix B and summarized herein in Tables 3-3 and 3-4, short-term construction air emissions would not result in significant impacts based on SCAQMD regional thresholds of significance or local thresholds of significance. As summarized in Table 3-5 herein, the ongoing operation of the Project would generate air pollutant emissions that are inconsequential on a regional basis and would not result in significant impacts based on SCAQMD thresholds of significance. As shown in Table 3-5, the analysis for long-term local air quality impacts showed that local pollutant concentrations would not be projected to exceed the air quality standards. Therefore, a less than significant long-term impact would occur and no mitigation would be required.

Therefore, based on the information provided above, the proposed Project would be consistent with the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the Project with the assumptions in the AQMP. The emphasis of this criterion is to ensure that the analyses conducted for the Project are based on the same forecasts for regional growth as the AQMP. The AQMP is developed through use of the planning forecasts provided in the RTP/SCS (Connect SoCal) and the SCAG Federal Transportation

Improvement Program. The RTP/SCS is a major planning document for the regional transportation and land use network within Southern California. The RTP/SCS is a long-range plan that is required by federal and state requirements placed on SCAG and is updated every four years. The FTIP provides long-range planning for future transportation improvement projects that are constructed with state and/or federal funds within Southern California. Local governments are required to use these plans as the basis of their plans for the purpose of consistency with applicable regional plans under CEQA. For this Project, the City of El Segundo General Plan's Land Use Plan defines the assumptions that are represented in AQMP.

The Project site is currently designated as Corporate Office in the General Plan and is zoned Corporate Office (CO). The CO Zone permits a maximum floor area ratio (FAR) of 0.8:1. Parcel 1 is allowed a maximum of 93,568 square feet of net floor area. The FAR for Parcel 1 will be 0.8:1. As such, the Project is consistent with the existing land use designation and zoning. Therefore, the proposed Project is not anticipated to exceed the AQMP assumptions for the Project site and is found to be consistent with the AQMP for the second criterion. The proposed 5-level parking structure on Parcel 2 would not contribute floor area, as defined in the El Segundo Municipal Code (ESMC §15-1-6, Definitions).

Based on the above, the proposed Project will not result in an inconsistency with the SCAQMD AQMP. Therefore, the Project would result in a less than significant impact to implementation of the AQMP.

3.b) The following section provides the calculated potential air emissions associated with the construction and operations of the Project and compares the emissions to the SCAQMD CEQA thresholds of significance.

Construction Emissions

The Project construction activities are anticipated to include site preparation, grading, building construction, application of architectural coatings, and paving and site improvements. The construction emissions have been analyzed for both regional and local air quality impacts.

Construction-Related Regional Impacts

The CalEEMod model has been used to calculate the Project construction-related regional emissions. The worst-case summer or winter daily Project construction-related criteria pollutant emissions for each phase of construction activities are shown below in Table 3-3. Since it is possible that building construction/renovation, architectural coating, and paving/site improvement activities may occur concurrently towards the end of the building construction phase, Table 3-3 shows the combined regional criteria pollutant emissions from these three construction stages (year 2024).

Table 3-3 shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds during either demolition/rough grading, grading/foundation, building construction, or the combined building construction, architectural coatings, and paving/site improvement phases. Therefore, the Project construction would result in a less than significant impact to regional air quality and no mitigation would be required.

Table 3-3. Construction-Related Regional Criteria Pollutant Emissions

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM_{10}	$PM_{2.5}$
Combined Site Preparation and Grading (Year 2022)[1]						
Onsite	2.94	35.49	23.11	0.08	2.77	1.74
Offsite	1.57	43.08	12.29	0.14	4.08	1.24
Total	4.51	78.57	35.40	0.22	6.85	2.97
Building Construction (Year 2023)						
Onsite	1.57	14.38	16.24	0.03	0.70	0.66
Offsite	0.43	2.16	4.72	0.02	1.56	0.43
Total	2.01	16.55	20.97	0.05	2.26	1.09
Combined Building Construction (Year 2024), Paving/Site Improvements, and Architectural Coatings						
Onsite	66.99	23.45	30.17	0.05	1.11	1.04
Offsite	0.55	2.23	5.89	0.02	1.85	0.56
Total	67.53	25.69	36.06	0.07	2.96	1.60
Maximum Daily Construction Emissions	67.53	78.57	36.06	0.22	6.85	2.97
SCQAMD Thresholds	75	100	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Notes:
1 Demolition and Grading based on adherence to fugitive dust suppression requirements from SCAQMD Rule 403.
2 Onsite emissions from equipment not operated on public roads.
3 Offsite emissions from vehicles operating on public roads.
Source: CalEEMod Version 2020.4.0.

Construction-Related Local Impacts

The local air quality emissions from construction were analyzed through utilizing the methodology described in *Localized Significance Threshold Methodology* (LST Methodology), prepared by SCAQMD, revised October 2009. The LST Methodology found that the primary criteria pollutant emissions of concern are nitric oxide (NO_x), carbon monoxide (CO), and particulate matter (PM_{10} and $PM_{2.5}$). In order to determine if any of these pollutants require a detailed analysis of the local air quality impacts, each phase of construction was screened using the SCAQMD's Mass Rate LST Look-up Tables. The Look-up Tables were developed by the SCAQMD to readily determine if the daily on-site emissions of CO, NO_x, PM_{10}, and $PM_{2.5}$ from a proposed project could result in a significant impact to the local air quality.

Table 3-4 shows the on-site emissions from the CalEEMod model for the different construction phases and the calculated localized emissions thresholds that have been detailed. Since it is possible that building construction, architectural coating, and paving/site improvement activities may occur concurrently, Table 3-4 shows the combined local criteria pollutant emissions from these three phases.

As shown in Table 3-4, the Project would not exceed any criteria pollutant local emissions thresholds during either site preparation/rough grading, grading/foundation, building construction, or the combined building construction, architectural coatings, and paving/site improvement phases. Therefore, construction of the Project would result in a less than significant impact to local air quality and no mitigation would be required.

Table 3-4. Construction-Related Local Criteria Pollutant Emissions

Phase	Pollutant Emissions[1] (pounds/day)			
	NOx	CO	PM_{10}	$PM_{2.5}$
Combined Site Preparation and Grading (Year 2022)[2]	40.87	24.65	3.28	1.89
Building Construction (Year 2023)	14.65	16.83	0.89	0.71
Combined Building Construction (Year 2024), Paving/Site Improvements, and Architectural Coatings	24.67	31.02	1.42	1.19
Maximum Daily Construction Emissions	40.87	31.02	3.28	1.89
SCAQMD Local Construction Thresholds[3]	175	1,520	13	7
Exceeds Threshold?	No	No	No	No

Notes:
1 The Pollutant Emissions include 100% of the On-Site emissions (off-road equipment and fugitive dust) and 1/8 of the Off-Site emissions (on road trucks and worker vehicles), in order to account for the on-road emissions that occur within a 1/4 mile of the project site.
2 Demolition and Grading phases based on adherence to fugitive dust suppression requirements from SCAQMD Rule 403.
3 The nearest offsite sensitive receptors are guests at the hotel located as near as 10 feet (3 meters) south of the project site. According to SCAQMD methodology, all receptors closer than 25 meters are based on the 25-meter threshold.
Source: Calculated from SCAQMD's Mass Rate Look-up Tables for two and five acres in Air Monitoring Area 3, Southwest Coastal LA County.

Operational Emissions

The ongoing operation of the Project would result in a long-term increase in air quality emissions. This increase would be due to emissions from on-site area sources, energy usage, and Project-generated vehicle trip emissions. The following section analyzes the potential long-term air quality impacts due to regional air quality and local air quality impacts with the ongoing operations of the Project.

Operations-Related Regional Criteria Pollutant Analysis

The operations-related regional criteria air quality impacts created by the Project have been analyzed through use of the CalEEMod model. The Project's worst-case summer or winter volatile organic compound (VOC), NO_x, CO, sulfur dioxide (SO_2), PM_{10}, and $PM_{2.5}$ daily emissions during long-term operations have been calculated and are summarized below in Table 3-5.

Table 3-5. Operational Regional Criteria Pollutant Emissions

Emissions Source	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM_{10}	$PM_{2.5}$
Area Sources[1]	2.45	0.03	0.14	<0.00	<0.00	<0.00
Energy Usage[2]	0.03	0.30	0.25	<0.00	0.02	0.02
Mobile Sources[3]	2.65	2.65	24.31	0.05	5.39	1.46
Backup Generator[4]	0.32	0.89	0.81	<0.00	0.05	0.05
Total Emissions	5.45	3.87	25.51	0.05	5.47	1.53
SCQAMD Operational Thresholds	55	55	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Notes:
1 Area sources consist of emissions from consumer products, architectural coatings, fire pits, and landscaping equipment.
2 Energy usage consist of emissions from natural gas usage.
3 Mobile sources consist of emissions from vehicles and road dust.
4 The size of the proposed backup generator has not yet been determined. This analysis is based on a 389 Horsepower diesel generator that has a cycling schedule of 30 minutes per week
Source: Calculated from CalEEMod Version 2020.4.0.

As shown in Table 3-5, the long-term operation of the Project would not exceed the criteria pollutant regional emissions thresholds. Therefore, operation of the Project would result a less than significant regional air quality impact and no mitigation would be required.

3.c) Some land uses are considered more sensitive to air pollution than others because of the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiorespiratory diseases. Residential areas are considered to be sensitive receptors to air pollution because residents (including children and the elderly) tend to be at home for extended periods of time, resulting in sustained exposure to any pollutants present. Children are considered more susceptible to the health effects of air pollution due to their immature immune systems and developing organs. As such, schools are also considered sensitive receptors, as children are present for extended durations and engage in regular outdoor activities. Recreational land uses are considered moderately sensitive to air pollution. Although exposure periods are generally short, exercise places a high demand on respiratory functions, which can be impaired by air pollution. In addition, noticeable air pollution can detract from the enjoyment of recreation.

The proposed Project would not expose sensitive receptors to substantial pollutant concentrations. The local concentrations of criteria pollutant emissions produced in the nearby vicinity of the Project, which may expose sensitive receptors to substantial concentrations have been calculated for both construction and operations, which are discussed separately below. The discussion below also includes an analysis of the potential impacts from toxic air contaminant (TAC) emissions. The nearest sensitive receptors to the Project site are apartment and multifamily residential uses at the intersection of East Holly Avenue and Indiana Street, approximately 1,150 feet northwest of the Project site.

Construction-Related Sensitive Receptor Impacts

The Project construction activities are anticipated to include site preparation, grading, building construction, application of architectural coatings, and paving and site improvements. Construction activities may expose sensitive receptors to substantial pollutant concentrations of localized criteria pollutant concentrations and from TAC emissions created from on-site construction equipment, which are described below.

Local Criteria Pollutant Impacts from Construction

The local air quality impacts from the Project construction have been analyzed, with the results provided in Table 3-4, which provides the on-site emissions from the CalEEMod model for the different construction phases and the calculated localized emissions thresholds. Since it is possible that building construction, architectural coating, and paving/site improvement activities may occur concurrently, the results combine local criteria pollutant emissions from building construction, paving and architectural coating phases of construction. As shown, the Project construction emissions would not exceed the local NO_x, CO, PM_{10} and $PM_{2.5}$ thresholds of significance. Therefore, construction of the proposed project would create a less than significant construction-related impact to local air quality and no mitigation would be required.

Toxic Air Contaminants Impacts from Construction

The greatest potential for TAC emissions would be related to diesel particulate matter (DPM) emissions associated with heavy equipment operations during Project construction. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "individual cancer risk." "Individual cancer risk" is the likelihood that a person exposed to concentrations of TACs over a 70-year

lifetime will contract cancer, based on the use of standard risk-assessment methodology. It should be noted that the most current cancer risk assessment methodology recommends analyzing a 30-year exposure period for the nearby sensitive receptors.[9]

The Project construction activities involve the operation of diesel-powered haul trucks and off-road equipment that would operate between 270 feet and 1,000 feet from the nearest homes. Construction activities would generate up to 83 haul truck trips per day during the grading phase of construction. According to CAPCOA's 2009 *Health Risk Assessments for Proposed Land Use Projects*, CAPCOA recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units. Since construction activities would generate less than the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, the Project would result in a less than significant TAC impact from construction-related haul trucks.

There would be up to nine pieces of diesel-powered off-road equipment operating simultaneously on the Project site during the site preparation and grading phase. All diesel-powered powered equipment would be required to adhere to California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 that regulates emissions from off-road diesel equipment in California. This regulation limits idling of equipment to no more than five minutes, requires equipment operators to label each piece of equipment and provide annual reports to CARB of their fleet's usage and emissions. This regulation also requires systematic upgrading of the emission Tier level of each fleet, and currently no commercial operator is allowed to purchase Tier 0 or Tier 1 equipment and by January 2023 no commercial operator is allowed to purchase Tier 2 equipment. In addition to the purchase restrictions, equipment operators need to meet fleet average emissions targets that become more stringent each year between years 2014 and 2023. As of January 2019, 25 percent or more of all contractors' equipment fleets must be Tier 2 or higher.

Given the relatively limited number of heavy-duty construction equipment and haul trucks used during the site preparation and grading phase, the varying distances that construction equipment would operate to the nearby sensitive receptors, and the short-term construction schedule, the proposed Project would not result in a long-term (i.e., 30 or 70 years) substantial source of TAC emissions and corresponding individual cancer risk Therefore, no significant short-term TAC impacts would occur during construction of the proposed project. As such, construction of the proposed Project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations and no mitigation would be required.

Operations-Related Sensitive Receptor Impacts

The following sections analyze the effects of ongoing operations of the Project, and the potential to expose sensitive receptors to substantial pollutant concentrations from the potential local air quality impacts from on-site operations and from possible TAC impacts.

9 California Office of Environmental Health Hazard Assessment. 2015. *The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments.*

Local Criteria Pollutant Impacts from On-site Operations

The local air quality impacts from the Project operation would occur from on-site sources such as architectural coatings, landscaping equipment, and natural gas appliances, as well as from vehicle emissions from the Project site and the immediate vicinity. The local NOx, CO, PM_{10} and $PM_{2.5}$ emissions resulting from the Project operations were analyzed using the SCAQMD's Mass Rate LST Look-up Tables and the methodology described in LST Methodology, and the results are summarized in Table 3-5. As shown, operation of the Project would not exceed the LST thresholds of significance. Therefore, the ongoing operations of the proposed Project would create a less than significant operations-related impact to local air quality due to on-site emissions and no mitigation would be required.

Operations-Related Toxic Air Contaminant Impacts

DPM is the predominant TAC in most areas and according to *The California Almanac of Emissions and Air Quality 2013 Edition*, prepared by CARB, about 80 percent of the outdoor TAC cancer risk is from diesel exhaust. The proposed Project would not generate other sources of TACs that could affect neighboring land uses. Some chemicals in diesel exhaust, such as benzene and formaldehyde, have been listed as carcinogens by State Proposition 65 and the Federal Hazardous Air Pollutants program. The *Health Risk Assessments for Proposed Land Use Project*, prepared by California Air Pollution Control Officers Association (CAPCOA), July 2009, recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units.

According to the ITE Trip Generation 10th Edition Supplement, Version 2/20/2020, for the ITE Land Use 710 – General Office Building, daily truck trips represent 1 percent of the overall trip generation for the proposed Project. Since the Transportation Impact Analysis (Appendix I) found that the proposed Project would generate 976 gross daily trips, this would result in approximately 10 daily truck trips per day or 5 truck deliveries per day to the Project site. Since the proposed Project would generate well below the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, a less than significant TAC impact would occur during the ongoing operations of the proposed Project and no mitigation would be required.

Therefore, operation of the proposed Project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations and no mitigation measures are required.

3.d) The Project would not create objectionable odors affecting a substantial number of people. Individual responses to odors are highly variable and can result in a variety of effects. Generally, the impact of an odor results from various factors such as frequency, duration, offensiveness, location, and sensory perception. The frequency is a measure of how often an individual is exposed to an odor in the ambient environment. The intensity refers to an individual's or group's perception of the odor strength or concentration. The duration of an odor refers to the elapsed time over which an odor is experienced. The offensiveness of the odor is the subjective rating of the pleasantness or unpleasantness of an odor. The location accounts for the type of area in which a

potentially affected person lives, works, or visits; the type of activity in which he or she is engaged; and the sensitivity of the impacted receptor.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of coatings such as asphalt pavement, paints and solvents and from emissions from diesel equipment. Standard construction requirements that limit the time of day when construction may occur as well as SCAQMD Rule 1108 that limits VOC content in asphalt and Rule 1113 that limits the VOC content in paints and solvents would minimize odor impacts from construction. As such, the objectionable odors that may be produced during the construction process would be temporary and would not likely be noticeable for extended periods of time beyond the project site's boundaries. Through compliance with the applicable regulations that reduce odors and due to the transitory nature of construction odors, a less than significant odor impact would occur and no mitigation would be required.

Operations-Related Odor Impacts

The Project is not considered an intensive odor-generating use such as landfills, solid waste transfer stations, material recovery facilities, and rendering plants. Potential sources that may emit odors during the ongoing operations of the Project would primarily occur from the and diesel emissions from the backup generator as well as the outdoor trash storage areas. The operation of the backup diesel generator would be limited to 200 hours or less per year and would include an exhaust stack with a diesel particulate filter that would limit the exhaust and associated odors created from the generator. There would be no odor sources from building interior activities or building systems that would reach the outdoor atmosphere. Pursuant to City regulations, permanent trash enclosures that protect trash bins from rain and limit air circulation would be required for the trash storage areas. Due to the distance of the nearest receptors (1,150 feet or 0.2 mile) from the Project site and through compliance with SCAQMD's Rule 402 (odor regulations), Rule 110.2 (backup generator regulations) and City trash storage regulations, a less than significant impact related to odors would occur during the ongoing operations of the proposed Project. Therefore, a less than significant odor impact would occur and no mitigation would be required.

4. BIOLOGICAL RESOURCES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	☐	☒
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Explanation of Checklist Responses

4.a–d) The Project site is in a fully developed, urbanized portion of the City and is not located in an area with high ecological sensitivity. As previously mentioned, the Project site is currently developed with an existing office building, parking structure, and surface parking lot. There are a total of 109 trees located on-site, which are ornamental trees, with 107 proposed to be removed. None of these trees are identified as protected trees, which include listed trees under the California Endangered Species Act, native trees identified in the Native Plant Protection Act, and street trees. The two trees to remain are located in the southwest portion of the site. There are ornamental trees and shrubs along the Project site's frontage along Grand Avenue that vary in size, species, and health. Other ornamental trees and shrubs are throughout the existing surface parking, central plaza, to the east and south of the existing office building, and along the northern edge of the parking structure; however, given that these trees are located within an urbanized area and surrounded by impervious surfaces, they are unlikely to support any sensitive wildlife species. There are no street trees across the property frontage. As such, ESMC Title 9 Chapter Three (Street Trees), which states that removal of a street tree by a private entity requires a permit from the City, would not apply. The Project proposes to plant 74 trees of a varying species throughout the Project site,

including a selection of olive, Chinese elm, jacaranda, and other species that would visually enhance the plaza. Other areas enhanced with new trees include the front setback area of buildings along the Grand Avenue street frontage and throughout the new surface parking lot next to the existing parking structure.

The Project site does not contain any natural vegetation, natural communities, or biological resources that could support any sensitive plants or wildlife species. The property is not in an area designated as critical habitat for any sensitive wildlife species, nor is the area subject to any conservation plans, recovery plans, or similar policies and ordinances. There are no wetlands, marshes, surface drainages, ponds, lakes, streams, or any type of water-based habitat or any riparian communities on or near the Project site.[10] No food or water sources are on-site or in the surrounding areas that would support migrating fish or wildlife. The vegetation and animal species supported in the limited man-made ornamental landscaping beds include species that are commonly found in urban environments and are thus not protected by California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. As a result, the Project would have no impact on sensitive or protected biological resources, migratory wildlife corridors, or protected wetland and riparian habitats.

4.e) As stated above, there are limited ornamental trees and shrubs along the Project site's Grand Avenue frontage that vary in size, species, and health. The proposed Project would provide landscaping to meet the types and minimum sizes of plant material (trees, shrubs, and groundcover) in landscaped areas in the plaza and in setback areas as required by the ESMC. Street trees would be installed where required and where feasible in compliance with the requirements of the ESMC and the City's Master Street Tree Plan. As stated above, 74 trees of varying species would be planted throughout the Project site, including California sycamore, olive, Chinese elm, and jacaranda. Other areas enhanced with new trees would include the front setback area along the Grand Avenue street frontage and throughout the proposed surface parking lot to the east of the existing parking structure. Compliance with the City's Street Tree chapter of the ESMC, which would be confirmed through the City's plan check process, would ensure that the Project would not conflict with an applicable local policy or ordinance protecting biological resources. As such, the Project would result in no impact.

4.f) As stated above, the Project site is a previously disturbed site with no existing natural vegetation. Although there are areas within El Segundo that contain sensitive habitat, they are located in coastal areas, specifically, coastal habitat for the El Segundo blue butterfly. As described in the General Plan Conservation Element, the El Segundo blue butterfly is listed on the federal endangered species list and is dependent upon and rarely strays from coastal buckwheat plants. At this time, the butterfly occurs on a 1.96-acre preserve adjacent to and maintained by the Chevron Refinery and in the dune area under the flight path of LAX. Since this Project is not located in the City's Coastal Zone, coastal sensitive habitat would not be impacted by the proposed Project. As such, given the existing use of the Project site as commercial office space, a parking structure, and surface parking lots, the Project would not conflict with provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan. The Project would have no impact.

5. CULTURAL RESOURCES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?	☐	☐	☐	☒
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?	☐	☒	☐	☐
c. Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

The following analysis is based in part on the information contained in the Project Cultural Resources Memorandum by Michael Baker International, which is included as Appendix D of this IS/MND.

Explanation of Checklist Responses

5.a) A historical resource is defined in CEQA Guidelines Section 15064.5(a)(3) as any object, building, structure, site, area, place, record, or manuscript determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Historical resources are further defined as being associated with significant events, important persons, or distinctive characteristics of a type, period, or method of construction; representing the work of an important creative individual; or possessing high artistic values.

The potential for historic resources on the Project site was evaluated in the Project Cultural Resources Memorandum by Michael Baker International (see Appendix D). The Project area was undeveloped until 1927, when the land was used for agricultural purposes. By 1952, agricultural development of the Project site had ceased. No built features are depicted within the Project area until 1971 with a small rectangular building in the northwest corner of the Project site. By 1981, the small rectangular building is no longer extant. During the 1980's the site was used for motor vehicle parking.[11] Then the site was developed with the existing 12-story office building and parking structure, with the Certificates of Occupancy issued on March 31, 1987 and on August 13, 1987, respectively. By 1991, the Project site is depicted with the current multistory commercial office building, parking lot, and plaza. The existing structures and resources were evaluated in accordance with Section 15064.5(a)(2)–(3) of the CEQA Guidelines using the criteria outlined in Section 5024.1 of the California Public Resources Code, and they do not appear to be historic resources for the purposes of CEQA. As evaluated in the Project Cultural Resources Memorandum, the Project site neither contains structures listed on the National Register of Historic Places nor includes structures listed as a Los Angeles Historic–Cultural Monument. As such, the Project would have no impact on a historic resource.

11 Historical Aerials Website: 1950 East Grand Avenue, El Segundo. https://historicalaerials.com/viewer. Accessed April 21, 2022.

5.b) An archaeological resource is defined in Section 15064.5(c) of the CEQA Guidelines as a site, area, or place determined to be historically significant as defined in Section 15064.5(a) or as a unique archaeological resource defined in Public Resources Code Section 21083.2 as an artifact, object, or site that contains information needed to answer important scientific research questions of public interest, or that has a special and particular quality such as being the oldest or best example of its type, or that is directly associated with a scientifically recognized important prehistoric or historic event or person.

The earliest inhabitants to the Los Angeles Basin occurred in the Paleocoastal or Paleoindian Period terms, indicating proximity to the coast, and generally dated to between about 13,000 and 8,500 before present (BP). These earliest inhabitants were highly mobile hunter-gatherers. From about 8,500 BP and 3,500 BP, the Encinitas tradition was a widespread cultural phenomenon in the Basin area distinguished by an abundance of manos and metates and a dearth of vertebrate faunal remains, projectile points, and mortar and pestle groundstone tools.

At the beginning of the historic period, the Project location is understood to be within the ancestral territory of the Gabrieliños, though no Gabrieliño villages are known to be within the vicinity of the Project site, and the place name *Waachnga* is located approximately three miles to the north-northwest. This place name potentially corresponds to the location of *Gauchn*, an Indigenous village. The Gabrieliño Indians are named because of their association with the Mission San Gabriel Arcángel, located approximately 20 miles northeast. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains, along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands. The Gabrielino spoke a dialect of the Cupan group of the Takic language family.

The Project area was once part of Rancho Sausal Redondo, and as mentioned above, remained undeveloped until 1927. The cultural resources assessment included a records search (File No. 21729.7831) on June 15, 2021, through the South Central Coastal Information Center (SCCIC). The SCCIC, as part of the California Historical Resources Information System, California State University, Fullerton, an affiliate of the California Office of Historic Preservation (OHP), is the official state repository of cultural resources records and reports for Los Angeles County. Three cultural resource reports were previously completed within the Project area, and two were completed within the quarter-mile search area, as identified in Table 5-1.

No cultural resources were identified within the Project area; however, because the Project would involve excavations for a new building that would include native soils, there is potential, however slight, to uncover previously undiscovered archaeological resources from the regional inhabitants.

As a result, the following Mitigation Measure CUL-1 will be implemented such that in the event of any discovery of unknown cultural resources during earthwork, impacts would be less than significant with mitigation.

Table 5-1. Previous Cultural Resource Investigations within 0.25 Mile of Project Site

Author(s)	Date	Title	Within Project Site Area?	Resources in Project area?
Wlodarski, Robert J.	1986	*Negative Archaeological Survey Report for O7-la-1 23.4/25.2*	No	No
Stickel, Gary E.	1993	*Draft Report a Phase I Cultural Resources Literature Search for the West Basin Water Reclamation Project*	Yes	No
Maki, Mark K.	2005	*Records Search Results for the Chevron El Segundo Refinery, El Segundo, Los Angeles County*	No	No
Harper, Caprice D. and Francesca Smith	2008	*Preliminary Cultural Resources Survey for the Formation of the Wiseburn Unified School District Project, Cities of El Segundo and Hawthorne, and Unincorporated Los Angeles County, CA*	Yes	No
Metro	2011	*Crenshaw/LAX Transit Corridor Project Final Environmental Impact Report/Final Environmental Impact Statement*	Yes	No

Mitigation Measure CUL-1: Archaeological and Native American monitoring shall be conducted for any grading-related ground-disturbing activity with the potential to disturb native soils (i.e., non-engineered fill) within the Project site. Monitoring shall be performed under the direction of a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983). If cultural resources are encountered during ground-disturbing activities, work in the immediate area must halt and the find must be evaluated by the qualified archaeologist. Depending upon the nature of the find, if the discovery proves to be potentially significant under CEQA, as determined by the qualified archaeologist, additional work such as data recovery excavation, avoidance of the area of the find, documentation, testing, data recovery, reburial, archival review and/or transfer to the appropriate museum or educational institution, or other appropriate actions may be warranted at the discretion of the qualified archaeologist. The archaeologist shall complete a report of excavations and findings and submit the report to the Director of Development Services. After the find is appropriately mitigated, work in the area may resume.

Timing/Implementation: *Applicant shall submit a copy of the executed agreement with the contracted qualified archaeologist to the City prior to any ground-disturbing activity for the project, or the issuance of any permit necessary to commence a ground-disturbing activity, whichever is earlier.*

Monitoring/Enforcement: *El Segundo Development Services Department*

5.c) No evidence of any prior human burials or use as a burial ground was identified in the Cultural Resources Assessment (see Appendix D) and Native American consultation process conducted for this property. Based on the fully developed conditions on the site and the extent of disturbance on the entire property, the likelihood that Project construction would encounter and impact any human remains is expected to be remote.

In the unlikely event that human remains are encountered during Project ground-disturbing activities, the remains shall be treated in accordance with California Health and Safety Code Section 7050.5, which states that no further disturbance shall occur

until the County coroner has made a determination of the origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County coroner shall be notified immediately. If the human remains are determined to be prehistoric, the coroner shall notify the Native American Heritage Commission, which shall determine and notify the most likely descendant. The most likely descendant shall complete the inspection of the site within 48 hours of notification and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials. Compliance with these regulations would reduce any potential impacts to a less than significant level.

6. ENERGY

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary construction of energy resources, during project construction or operation?	☐	☐	☒	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	☒	☐

The following analysis is based in part on the information contained in *Air Quality, Energy, and Greenhouse Gas Emissions Impact Analysis* prepared by Vista Environmental dated March 20, 2022. This report is included as Appendix C of this IS/MND.

Explanation of Checklist Responses

6.a) The proposed Project would impact energy resources during construction and operation. Energy resources that would be potentially impacted include electricity, natural gas, and petroleum-based fuel supplies and distribution systems.

Project Construction

The Project construction activities are anticipated to include site preparation, grading, building construction, application of architectural coatings, and paving and site improvements. Based on these activities, the proposed Project would consume energy resources during construction in three (3) general forms:

- Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project site, construction worker travel to and from the Project site, as well as delivery and haul truck trips (e.g. hauling of demolition material to off-site reuse and disposal facilities);
- Electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power; and,
- Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction-Related Electricity

During construction, the Project would consume electricity to construct the new structures and infrastructure. Electricity would be supplied to the Project site by Southern California Edison (SCE) and would be obtained from the existing electrical lines on the Project site. The use of electricity from existing power lines rather than temporary diesel or gasoline powered generators would minimize impacts on energy use. Electricity consumed during Project construction would vary throughout the construction period

based on the construction activities being performed. Various construction activities include electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power. Such electricity demand would be temporary, nominal, and would cease upon the completion of construction. Overall, the Project construction would require limited electricity consumption that would not be expected to have an adverse impact on available electricity supplies and infrastructure. Therefore, the use of electricity during Project construction would not be considered wasteful, inefficient, or unnecessary.

Since SCE already provides power to the Project site, it is anticipated that only nominal improvements would be required to SCE distribution lines and equipment with development of the proposed project. Compliance with the 2019 California Electrical Code, as adopted by the City, and SCE requirements would ensure that the proposed Project fulfills its responsibilities relative to infrastructure installation, coordinates any electrical infrastructure removals or relocations, and limits any impacts associated with construction of the project. Construction of the Project's electrical infrastructure is not anticipated to adversely affect the electrical infrastructure serving the surrounding uses or utility system capacity. Impacts would be less than significant and no mitigation would be required.

Construction-Related Natural Gas

The Project construction would not involve the consumption of natural gas. Natural gas would not be supplied to support construction activities, thus there would be no demand generated by construction. Since SoCal Gas already provides natural gas to the Project site, construction-related activities would be limited to installation of new natural gas connections within the Project site. Similarly, the Project would not require extensive natural gas infrastructure improvements to serve the buildings. Construction-related energy usage impacts associated with the installation of natural gas connections are expected to be limited to trenching in order to place the lines below surface. In addition, prior to ground disturbance, the Project would notify and coordinate with SoCalGas to identify the locations and depth of all existing gas lines and avoid disruption of gas service. Therefore, construction-related impacts to natural gas supply and infrastructure would be less than significant and no mitigation would be required.

Construction-Related Petroleum Fuel Use

Petroleum-based fuel usage represents the highest amount of transportation energy potentially consumed during construction, which would be utilized by both off-road equipment operating on the Project site and on-road automobiles transporting workers to and from the Project site and on-road trucks transporting equipment and supplies to the Project site.

The off-road construction equipment fuel usage was calculated through use of the off-road equipment assumptions and fuel use assumptions provided by the applicant, which found that the off-road equipment utilized during Project construction would consume 52,904 gallons of fuel. The on-road construction trips fuel usage was calculated through use of the construction vehicle trip assumptions and fuel use assumptions, which found that the on-road trips generated from Project construction,

including truck haul trips to export soil cut and site preparation debris, would consume 40,837 gallons of fuel. As such, the combined fuel used from off-road construction equipment and on-road construction trips for the proposed Project would result in the consumption of 93,742 gallons of petroleum fuel. This equates to 0.0024 percent[12] of the gasoline and diesel consumed in the County of Los Angeles annually.

The Project construction activities would be required to adhere to all State and SCAQMD regulations for off-road equipment and on-road trucks, which provide minimum fuel efficiency standards. As such, construction activities would not result in the wasteful, inefficient, and unnecessary consumption of energy resources. Impacts regarding transportation energy would be less than significant. Development of the proposed project would not result in the need to manufacture construction materials or create new building material facilities specifically to supply the Project. While it is difficult to measure the energy used in the production of construction materials such as asphalt, steel, and concrete, it is reasonable to assume that the production of building materials such as concrete, steel, etc., would employ all reasonable energy conservation practices in the interest of minimizing the cost of doing business.

Operations-Related Electricity

Electricity would be supplied to the Project site by Southern California Edison (SCE) and would be obtained from the existing electrical lines on the Project site. SCE has issued a will-serve letter to confirm they are able to provide service to the site operations. Operation of the Project would result in consumption of electricity for interior and exterior lighting, heating and cooling systems, a variety of electrical appliances and office machinery, electrical vehicle charging infrastructure, and for outdoor irrigation system controls. The Project electricity consumption during operations was calculated to be 1,882,988 kilowatt-hours per year of electricity. This equates to 0.0029 percent[13] of the electricity consumed annually in the County of Los Angeles.

It should be noted, the Project would be required to comply with all Federal, State, and City requirements related to the electricity consumption, including California Code of Regulations (CCR) Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed office buildings, including enhanced insulation, use of energy efficient lighting and appliances, water and space heating systems, as well as requiring a variety of other energy-efficiency measures to be incorporated into the proposed office structures. Therefore, it is anticipated the Project will be designed and built to maximize efficiency of electricity use and that existing and planned electricity capacity and electricity supplies would be sufficient to support the proposed project's electricity demand. Thus, the Project would not result in the wasteful or inefficient use of electricity and impacts would be less than significant, with no required mitigation measures.

12 According to the California Energy Commission's "2010-2017_A15_Results.xlsx", in 2017, 3,659 million gallons of gasoline and 300 million gallons of diesel was sold in Los Angeles County. Data accessed on February 7, 2022 at: https://ww2.energy.ca.gov/almanac/transportation_data/gasoline/).

13 According to the California Energy Commission, in 2020, Los Angeles County consumed 65649.87 Gigawatt-hours per year of electricity. Data accessed on February 7, 2022 at: http://www.ecdms.energy.ca.gov/elecbycounty.aspx,)

Operations-Related Natural Gas

Natural gas would be supplied to the Project site by SoCalGas, who has issued a will-serve letter to confirm they are able to provide service to the site operations. Project]]operations, which include use of outdoor fireplaces, would result in increased consumption of natural gas, which was calculated to be 1,087 MBTU per year of natural gas. This equates to 0.0004 percent[14] of the natural gas consumed annually in Los Angeles County.

As mentioned previously, the Project would be required to comply with all Federal, State, and City requirements, including those related to the natural gas consumption. These include CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into projects, including enhanced insulation as well as use of efficient natural gas appliances and HVAC units. Therefore, it is anticipated the Project will be designed and built to maximize efficiency of natural gas use and that existing and planned natural gas capacity and natural gas supplies would be sufficient to support the proposed Project's natural gas demand. Thus, impacts with regard to wasteful or inefficient use of natural gas supply and infrastructure capacity would be less than significant and no mitigation measures would be required.

Therefore, the proposed Project would not result in the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Impacts would be less than significant and no mitigation would be required.

6.b) The proposed Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Although the City has not adopted any specific plans that address energy efficiency, the City adopted the *City of El Segundo Climate Action Plan* on December 2017, that has been prepared to help the City comply with the City's GHG emissions reduction goals through implementation of many measures that also result in energy conservation and efficiency. As noted in Table 8-2 in Section 8 – Greenhouse Gas Emissions, the Project would be consistent with the City's CAP and with the applicable energy efficiency strategies set forth in the CAP. This would primarily entail project compliance with the building energy efficiency standards set forth in Title 24, Part 6 of the California Government Code, and compliance with the City's Municipal Code, Title 13, Chapter 11, Green Building Standards Code, requires all development projects, including this Project, to meet the California Green Building Standards Code (CalGreen) building requirements to implement various energy efficiency design features into the proposed office buildings. As such, the proposed Project would be designed to meet all applicable State building energy efficiency standards as well as to meet the City's energy efficiency standards. Therefore, the Project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Impacts would be less than significant and no mitigation would be required.

14 According to the California Energy Commission, in 2020, Los Angeles County consumed 2,936.69 million therms of natural gas. Data accessed online on February 7, 2022 at: http://www.ecdms.energy.ca.gov/gasbycounty.aspx.

7. GEOLOGY AND SOILS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☐	☒
ii) Strong seismic ground shaking?	☐	☐	☒	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit that is unstable, or that would become unstable as a result of the project, and potentially result in on-or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the California Building Code (2004), creating substantial risks to life or property?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐

This section is based, in part, on the Report of Geotechnical Consultation prepared by Wood Environment & Infrastructure Solutions, Inc., revised November 3, 2020, which is included as Appendix D of this IS/MND and the Project Preliminary Low Impact Development (LID) Report prepared by Ware Malcomb, dated June 16, 2021, provided in Appendix F.

Explanation of Checklist Responses

7.a.i) The Alquist-Priolo Earthquake Fault Zoning Act of 1972 serves to mitigate the hazard of surface faulting to structures for human occupancy and is intended to prevent the construction of buildings used for human occupancy on the surface trace of active faults. The act requires the State Geologist to establish regulatory zones, known as Alquist-Priolo Earthquake Fault Zones, around the surface traces of active faults and to

issue maps delineating these zones. If an active fault is found, a structure for human occupancy cannot be placed over the trace of the fault and must be set back from the fault (typically 50 feet). The act defines active faults as those that have experienced surface displacement or movement during the last 11,000 years.

The Project site is located at 1950 and 1960 Grand Avenue, in a seismically active region in Southern California near several fault systems. According to the Department of Conservation and provided in the Project geotechnical investigation (Appendix E), the Project site is not affected by a State-designated Alquist-Priolo Earthquake Fault Zone.[15] Mapped fault zones closest to the Project vicinity include the Newport-Inglewood, Palos Verdes, Puente Hills (LA), and Santa Monica Faults, located 3.6, 4.9, 8.1, and 8.9 miles, respectively, from the Project site. The geotechnical report did not identify any traces of faults on or near the Project site, and the site does not lie within the boundaries of a known earthquake fault zone. The Project would not expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death, involving rupture of a known earthquake fault. Because there are no known faults on or near the Project site, the Project would be expected to result in no impact.

7.a.ii) Ground shaking is the primary cause of structural damage during an earthquake. Magnitude, duration, and vibration frequency from earthquakes would vary greatly, depending on the fault and its distance from the Project site.

As mentioned above, the nearest known active faults are the Newport-Inglewood, Palos Verdes, Puente Hills (LA), and Santa Monica Faults, located 3.6, 4.9, 8.1, and 8.9 miles from the Project site, with anticipated maximum moment magnitudes (Mw) of 7.5, 7.7, 7.0, and 7.4, respectively. Seismic activity along these faults or on any other of the numerous faults in the Southern California area would cause seismic ground shaking in El Segundo and consequently is considered during project design.

General types of ground failures that might occur as a consequence of severe ground shaking include landsliding, ground lurching, and shallow ground rupture. The probability of occurrence for these types of failures depends on the severity of the earthquake, distance from faults, topography, subsoils, and groundwater conditions. Current geotechnical analysis of the project site indicates none of these effects would be considered likely to occur. The potential for dynamic settlement resulting from severe earthquake shaking along the proposed fill slopes is present and is estimated to be on the order of less than one inch. The potential for ground rupture is remote and is not considered to be a hazard for this project.

The Project would be required to conduct a final geotechnical investigation and be designed in accordance with the California Building Standards Code (CBSC) and ESMC standards through the City's plan review and permitting process, which would reduce the effects of seismic ground shaking. As a result, the effects of ground shaking would be expected to be less than significant for the Project and no mitigation would be required.

7.a.iii) Liquefaction is the transformation of a deposit of soil from a solid state to a liquefied state, typically during prolonged ground shaking events such as earthquakes, and the soil acquires mobility sufficient to permit both horizontal and vertical movements.

15 California Department of Conservation. EQ Zapp: California Earthquake Hazards Zone Application (https://maps.conservation.ca.gov/cgs/EQZApp/app/).

According to the Project's preliminary geotechnical investigation, the Project site is not located in a California Geological Survey Liquefaction Hazard Zone, which is defined as areas where historical occurrence of liquefaction, or local geological, geotechnical and groundwater conditions indicate a potential for permanent ground displacement. Groundwater was not encountered during prior geotechnical explorations that reached a depth of 101 feet. Given this depth to groundwater, the site is not subject to liquefaction-induced settlement. Additionally, as the Project would be required to be designed in accordance with CBSC and ESMC standards, the Project would be expected to result in less than significant impacts to liquefaction hazards and no mitigation would be required.

7.a.iv) The Project site is characterized by relatively flat topography. No unusual geographic features exist on the site or in its vicinity; thus, the site does not have the potential to slide or to experience sliding from adjacent areas. According to the California Department of Conservation, the Project site is not located in a landslide hazard area. Therefore, Project implementation would not expose people or structures to landslides.[16] Thus, no impact would occur.

7.b) Construction of the Project involves ground-disturbance activities such as site preparation, asphalt removal, grading, excavation and trenching for foundations and utilities, and the erection of two new structures. Unstable soil conditions could develop if exposed soils are exposed to rain and wind erosion, or construction traffic.

However, the Project would be subject to the requirements of the National Pollutant Discharge Elimination System (NPDES) program and the Los Angeles County Separate Storm Sewer System (MS4) Permit (NPDES Permit No. CAS004004, Order No. R4-2021-0105) (implemented through a Stormwater Pollution Prevention Plan [SWPPP] and Standard Urban Stormwater Mitigation Plan [SUSMP]) and the City's Municipal Code. Both the ESMC and the SUSMP require application of erosion and sedimentation control best management practices (BMPs) during construction for proper water quality management. Erosion control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. The Project's preliminary drainage design, which include erosion control and sedimentation control BMPs implemented for Project operation is provided in Appendix F. Further, the Project applicant is required to comply with SCAQMD Rule 403, which would reduce the potential for wind erosion by requiring the implementation of dust control measures during construction.

Compliance with these requirements would prevent significant soil erosion during construction. During operations, the majority of the fully developed site would be covered by impervious surfaces such as pavement and buildings, which would prevent any soil erosion following construction. Unpaved areas would be landscaped, which would also prevent soil erosion. In summary, Project-related impacts involving soil erosion and loss of topsoil would be less than significant and no mitigation would be required.

7.c) The Project site has a relatively flat topography, with no hillsides on-site or in the surrounding area. Further, the Project site is not located on a cliff, mountainside, bluff, or other geographic feature with stability concerns. As described above in checklist

16 California Department of Conservation. EQ Zapp: California Earthquake Hazards Zone Application (https://maps.conservation.ca.gov/cgs/EQZApp/app/).

response 7.a, the site is not susceptible to liquefaction, landslide, subsidence, or collapse. Grading and structural design of the proposed improvements would apply the recommendations of the final geotechnical report and the applicable standards of the California Building Code to ensure that the proposed building foundation provides a stable footing for the proposed new building. The Project is expected to result in less than significant impacts related to unstable geologic units or soils; thus, no mitigation would be required.

7.d) Based on the geotechnical report prepared for the Project (Appendix E), the site is underlain by fill ranging from 2 feet to 22 feet below ground surface (bgs). This fill consisted of silty sand and sand. Below the fill, the soil is primarily sand with some near surface silty sands and layers of clayey silt and sandy silt below a depth of 80 feet bgs. As recommended in the geotechnical report, any imported fill would consist of non-expansive soils. Therefore, the proposed Project's impacts related to expansive soils would be less than significant and no mitigation would be required.

7.e) No septic tanks or alternative wastewater disposal systems are proposed as part of the Project. Since the Project site is currently developed, sewer and wastewater infrastructure are currently in place. Furthermore, the site is connected to the public sewer system in the City. Therefore, no impact would occur with regard to sewers or alternative wastewater disposal systems.

7.f) The Project site does not contain any unique geological feature or formation. As discussed previously, the entire Project property has been highly disturbed with prior agricultural uses and subsequently developed with the current buildings and parking lot. As shown in the Project's geotechnical report (Appendix E), subsurface boring has indicated that the Project site sediments consist of artificial fill ranging from 2 feet to 22 feet, followed by underlying eolian deposits. Based on prior paleontological investigations performed for the Crenshaw Transit Corridor Project and LAX Master Plan Final EIS/EIR, which include the Project area, sensitive paleontological resources were identified in the Project vicinity. Construction of the office building and parking structure would require excavations exceeding 1 foot during the foundation work. As a result, the Project has the potential to disturb unknown paleontological resources. The following Mitigation Measure PALEO-1 will be implemented such that in the event of any discovery of unknown paleontological resources during earthwork, impacts would be less than significant with mitigation.

> Mitigation Measure Paleo-1: The applicant shall retain a qualified paleontologist who meets the qualifications established by the Society of Vertebrate Paleontology (SVP) to develop a Worker Environmental Awareness Program (WEAP), which shall be in compliance with SVP guidelines. The paleontologist shall present the training to all construction staff to provide them with a basic understanding of the types of fossils that may be encountered and the laws protecting them, and the procedures to follow in the event the finds are encountered. In the event that paleontological resources are encountered during earth disturbance activities, all construction activities in the area of the find shall be temporarily halted and the paleontologist shall be notified to evaluate the find and determine the appropriate treatment in accordance with SVP guidelines for identification, evaluation, disclosure, avoidance, or recovery, and curation, as appropriate.
>
> *Timing/Implementation: Applicant shall submit a copy of the executed agreement with the contracted qualified paleontologist*

to the City prior to any ground-disturbing activity for the project, or the issuance of any permit necessary to commence a ground-disturbing activity, whichever is earlier. WEAP training shall be administered prior to the start of earthwork activities and shall be administered to any new construction workers involved in excavation efforts associated with the Project.

Monitoring/Enforcement: *El Segundo Development Services Department*

8. GREENHOUSE GAS EMISSIONS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

The following analysis is based in part on the information contained in *Air Quality, Energy, and Greenhouse Gas Emissions Impact Analysis* prepared by Vista Environmental dated March 2022. This report is included as Appendix C of this IS/MND.

Explanation of Checklist Responses

8.a) Amendments to CEQA Guidelines Section 15064.4 were adopted to assist lead agencies in determining the significance of GHG emissions impacts. CEQA Guidelines Section 15064.4 gives lead agencies the discretion to determine whether to assess those emissions quantitatively or qualitatively. If a qualitative analysis is used, in addition to quantification, this section recommends certain qualitative factors that may be used in the determination of significance (i.e., extent to which the project may increase or reduce GHG emissions compared to the existing environment; whether the project exceeds an applicable significance threshold; and extent to which the project complies with regulations or requirements adopted to implement a reduction or mitigation of GHGs). The amendments to CEQA Guidelines Section 15064.4 do not establish a threshold of significance; rather, lead agencies are granted discretion to establish significance thresholds for their respective jurisdictions.

CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of non-significance for GHG emissions if a project complies with a program and/or other regulatory schemes to reduce GHG emissions. The City adopted the *City of El Segundo Climate Action Plan* (El Segundo CAP) in 2017 to help implement compliance with the City's GHG emissions reduction goals as well as State and federal regulations that include Assembly Bill (AB) 32 (Chapter 488, Statutes of 2006), Senate Bill (SB) 32 (Chapter 249, Statutes of 2016), and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP was prepared in accordance with Section 15183.5(b) of the State CEQA Guidelines for qualified plans to support tiering for project level analyses, and states "Within the CEQA process, a qualified CAP framework offers the ability to streamline future CEQA greenhouse gas analyses by being able to tier off the climate action plan."

While the El Segundo CAP does not provide GHG thresholds of significance and quantification of the proposed Project's GHG emissions are not required to show consistency with the CAP, the Project's GHG emissions have been calculated with the CalEEMod model, for informational purposes. A summary of the results is shown below in Table 8-1.

Table 8-1. Project Related Greenhouse Gas Annual Emissions

Category	Greenhouse Gas Emissions (Metric Tons per Year)			
	CO_2	CH_4	N_2O	CO_2e
Area Sources[1]	0.51	<0.00	<0.00	0.51
Energy Usage[2]	393.35	0.03	<0.00	395.42
Mobile Sources[3]	641.50	0.05	0.03	651.37
Backup Generator[4]	3.85	<0.00	<0.00	3.86
Solid Waste[5]	8.83	0.52	<0.00	21.88
Water and Wastewater[6]	53.80	0.44	0.01	67.94
Construction[7]	28.72	<0.00	<0.00	29.21
Total GHG Emissions	1,130.55	1.04	0.04	1,170.19

Notes:
1 Area sources consist of GHG emissions from consumer products, architectural coatings, and landscaping equipment.
2 Energy usage consists of GHG emissions from electricity and natural gas usage.
3 Mobile sources consist of GHG emissions from vehicles.
4 The size of the proposed backup generator has not yet been determined. This analysis is based on a 389 Horsepower diesel generator that has a cycling schedule of 30 minutes per week.
5 Waste includes the CO2 and CH4 emissions created from the solid waste placed in landfills.
6 Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
7 Construction emissions amortized over 30 years as recommended in the SCAQMD GHG Working Group on November 19, 2009.
Source: CalEEMod Version 2020.4.0.

The data provided in Table 8-1 shows that the Project would generate 1,170.19 metric tons of carbon dioxide equivalent ($MTCO2_e$) per year of GHGs, which includes the 30-year amortized construction emissions, and is below the SCAQMD draft GHG significance threshold of 3,000 $MTCO2_e$ per year for residential/commercial sector uses.[17] It should be noted that Table 8-1 is based on current emission rates from area sources, energy usage, solid waste, water and wastewater sources. State regulations, including SB 100 (Chapter 312, Statutes of 2018) that requires 100 percent of retail sales of electricity to be generated from zero-carbon emissions sources by 2045, along with other regulations aimed at GHG reduction from other sources, will result in further reducing these emissions sources. In addition, the transportation sources only incorporate previously adopted state regulations and do not account for recent state regulations, including the anticipated reductions from Executive Order N-79-20 that requires 100 percent of new passenger vehicles sold in California to be zero-emissions by 2035. The Project's consistency with the El Segundo CAP is provided in Table 8-2, below. In summary, proposed Project would not generate substantial levels of GHG emissions, either directly or indirectly, that may have a significant impact on the environment. Project impacts would be less than significant and no mitigation measures would be required.

8.b) The applicable plan for the Project would be the El Segundo CAP, which was developed in cooperation with the South Bay Cities Council of Governments (SBCOG) and serves as a guide for action by setting GHG emission reduction goals and establishing strategies and policies across various sectors to achieve desired outcomes into the future. The strategies are community-wide and focus on lowering GHG emissions from a range of sources including transportation, land use, energy generation and consumption, water, and waste. The Project's consistency with applicable GHG emissions reduction strategies in the El Segundo CAP is provided in Table 8-2.

17 SCAQMD, *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans*, October 29, 2008.

Table 8-2. Consistency with the El Segundo CAP

Sub-Strategies	Project Consistency
Goal LUT: A – Accelerate the Market for EV Vehicles	
LUT: A1 EV Parking Policies	Not Applicable. This Strategy requires the City to consider allowing a reduction of parking spaces in exchange for EV or Neighborhood Electric Vehicle (NEV) parking. The Project applicant is not requesting a reduction in parking spaces. Nevertheless, the Project is proposing 7 electric vehicle spaces.
LUT: A2.4 Adopt charging standards beyond CalGreen 2016 requirements.	Does not conflict. This action is applicable to the City to implement. However, the Project is required to meet CalGreen 2016 requirements for on-site electric vehicle charging infrastructure.
LUT: A2.5 Create policies that encourage facility owners to provide level 1 charging.	Not Applicable. This action is applicable to the City to implement. However, the Project will include designated EV parking.
Goal LUT: B – Encourage Ride-Sharing	
LUT: B1 Facilitate Private and Public Mobility Services (Ride-Hailing, Ride-Sharing, Car-Sharing, Bike-Sharing)	Not Applicable. This policy is only applicable to the City to work with private and public services to provide different types of mobility services for sharing.
LUT: B1.1 Facilitate bike-sharing.	Does not conflict. This policy is applicable to the City to implement; however, the Project supports this goal by providing both short-term and long-term bike parking.
LUT: B1.2 Facilitate car-sharing.	Does not conflict. This policy is applicable to the City to implement.
LUT: B1.3 Facilitating ride-hailing and ride-sharing.	Does not conflict. This policy is applicable to the City to implement. However, the Project is over parked and the proposed extra parking spaces could be used for ride-hailing and ride-sharing uses in the future.
Goal LUT: D – Adopt Active Transportation Initiatives	
LUT: D1 Provide Traffic Calming Measures	Consistent. The Project meets the City's strategies to provide traffic calming measures with proposed increased landscaping along the Project frontage and encouraging pedestrian and bicycle uses.
LUT: D1.2 Use traffic calming measures on streets where feasible.	Consistent. The Project meets the City's requirements to provide traffic calming measures on the Project site with increased landscaping along the Project frontage and encouraging pedestrian and bicycle uses.
LUT: D1.2 Use traffic calming measures on streets where feasible.	Consistent. The proposed Project meets the City's requirements to provide traffic calming measures as mentioned above on the Project site.
LUT: D1.3 Implement traffic calming measures in future developments.	Consistent. The proposed Project meets the City's requirements to provide traffic calming measures as mentioned above on the Project site.
LUT: D1.4 Promote traffic calming measures in future developments.	Consistent. The proposed Project meets the City's requirements to provide traffic calming measures as mentioned above in future developments.
LUT: D2 Provide Pedestrian/Bicycle Networks Improvements	Consistent. The Project provides an on-site pedestrian and bicycle circulation system and associated amenities.
LUT: D2.1 Provide pedestrian and bicycle networks.	Consistent. The proposed Project provides pedestrian and bicycle circulation.
LUT: D3 Improve Design of Development.	Consistent. The Project improves design development by providing pedestrian and bicycle amenities and bicycle parking.
LUT: D3.1 Amend the Bicycle and Pedestrian Master Plan.	Does not conflict. This policy is applicable to the City to implement. However, the proposed Project supports this goal by providing an onsite pedestrian and bicycle circulation system.
LUT: D3.2 Require bicycle parking through the Zoning Code or other implementation documents.	Does not conflict. This policy is only applicable to the City to implement. However, the Project does provide both short-term and long-term bicycle parking.

Table 8-2, continued

Sub-Strategies	Project Consistency
LUT: D3.3 Require new developments to provide pedestrian, bicycle, and transit amenities.	Consistent. The Project would provide pedestrian and bicycle amenities.
LUT: D3.5 Require commercial and multi-family residential projects to provide permanent bicycle parking facilities.	Consistent. The Project would provide permanent (long-term) bicycle parking locations.
LUT: D3.6 Provide short and long-term bicycle parking near key areas.	Consistent. The Project would provide both short and long-term bicycle parking on the Project site.
LUT: D3.12 Construct or improve pedestrian infrastructure around transit.	Does not conflict. This policy is applicable to the City to implement. However, the Project would provide an on-site pedestrian circulation system.
Goal LUT: E – Parking Strategies	
LUT: E2.2 Encourage developers of new development to unbundle parking and eliminate the assignment of specific stalls.	Consistent. The Project parking structure would not assign specific stalls other than for electric and clean air vehicle spaces within the public parking areas.
Goal EE: D – Increase Energy Efficiency in New Commercial Developments	
EE: D Encourage or Require EE Standards Exceeding Title 24	Consistent. The Project will be designed to meet or exceed existing Title 24 requirements.
Goal EE: E – Increase Energy Efficiency through Increased Water Efficiency (WE)	
EE: E1 Promote or Require Water Efficiency Through SB X7-7.	Does not conflict. This policy is only applicable to the City to implement. However, the Project is required to meet California Green Building Standards Title 24 Part 11 related to water efficiency.
EE: E1.3 Require low-irrigation landscaping.	Consistent. The proposed project will provide low-water demand irrigation landscaping.
Goal EE: F – Decrease Energy Demand through Reducing Urban Heat Island Effect	
EE: F1 Promote Tree Planting for Shading and EE	Consistent. The Project provides a landscape plan with 74 trees of varying species, including specimen size jacaranda and tipu trees that will provide shading.
EE: F1.1 Encourage tree planting at plan check.	Not Applicable. This policy is only applicable to the City to implement. However, the proposed project does provide a landscape plan with a variety of new trees.
Goal EE: G – Participate in Education, Outreach and Planning for Energy Efficiency	
No Sub-Strategies provided for this Goal, which does not apply to developers of private commercial land uses.	
Goal EE: H – Increase Energy Efficiency in Municipal Buildings	
No Sub-Strategies provided for this Goal, which does not apply to private development projects.	
Goal EE: I – Increase Energy Efficiency in City Infrastructure	
No Sub-Strategies provided for this Goal, which does not apply to private development projects.	

Source: City of El Segundo Climate Action Plan, 2017.

As shown in Table 8-2, the proposed Project would generally be consistent with applicable strategies identified in the El Segundo CAP. Therefore, implementation of the Project would not impede attainment of the GHG reduction objectives in the CAP and would not result in cumulatively considerable environmental impacts associated with its GHG emissions. Project impacts would be less than significant and no mitigation measures are required.

9. HAZARDS AND HAZARDOUS MATERIALS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☒	☐
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
g. Expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires?	☐	☐	☐	☒

Responses to the following questions include information from site investigations and assessments of prior land use activities regarding potential environmental contaminants in the Phase I Environmental Site Assessment (ESA) prepared by EBI Consulting, dated October 10, 2019. The investigation report is included in this Initial Study as Appendix G and was conducted on both parcels comprising the Project site area. The Phase I ESA was conducted to identify potential presence of recognized environmental conditions (RECs) or historical recognized environmental conditions (HRECs) through review of historical property information and regulatory files and databases, and conducting interviews with property representatives and site reconnaissance, in general conformance with ASTM Practice E1527-05 Standard Practice for ESAs.

Explanation of Checklist Responses

9.a) The proposed Project would provide office building uses that would involve the use of equipment and materials that are standard in general office, parking, and landscaping uses. Small amounts of commercially available hazardous materials may be used for regular cleaning and maintenance activities, which would neither require the storage,

use, or disposal of substantial amounts of hazardous materials nor generate significant quantities of hazardous waste. This usage would not require the storage, use, transport, or disposal of quantities of hazardous substances that would be subject to any special handling or permitting requirements. Therefore, this Project's normal operations would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. Impacts in this regard would be less than significant and no mitigation measures are required.

9.b) The Project site was developed for agricultural use from at least 1928. At some point prior to 1947, in addition to agricultural uses, the site became part of an oilfield exploration terrain. By 1952, agricultural development of the Project site had ceased. No built features are depicted within the Project area until 1971 with a small rectangular building in the northwest corner of the Project site. By 1981, the small rectangular building is no longer extant. During the 1980's the site was used for motor vehicle parking.[18] In 1987, the site was developed into its present configuration with the existing 12-story office building, parking structure, and plaza. Based on the age of the buildings, the prior uses, and proposed construction activities, the Project has a low to negligible potential to result in accidental releases of hazardous substances. The Phase I did not identify any RECs on or adjacent to the Project site.

Construction activities may also include refueling and minor maintenance of construction equipment on-site, which could lead to minor fuel and oil spills. As described in checklist response 10.a, a variety of construction control measures would be incorporated, including preconstruction development controls, sedimentation, storm drain, landscaping, and irrigation controls to prevent conditions that would release hazardous materials into the environment.

In summary, the Project has a low potential to result in accidental releases of hazardous substances due to construction activities and impacts would be less than significant and no mitigation would be required.

9.c) The nearest school is El Segundo Middle School, which is approximately 2,579 feet (0.49 miles) west of the Project location. As such, the risk of hazardous emissions or handling hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school is negligible. Further, as discussed above under 9.b, no RECs have been identified on or adjacent to the Project. During operations, the indoor and outdoor activities associated with the proposed office use would not generate hazardous air emissions or handle hazardous or acutely hazardous materials, substances, or waste.

Therefore, the proposed Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. Impacts in this regard are less than significant and no mitigation would be required.

9.d) The Phase I ESA (Appendix G) included a search of the Department of Toxic Substances (DTSC) EnviroStor database and a search of the State Water Resources Control Board leaking underground storage tank database (GeoTracker) and found no sites involving current or past site contamination and government agency oversight thereof within 500

18 Historical Aerials Website: 1950 East Grand Avenue, El Segundo. https://historicalaerials.com/viewer. Accessed April 21, 2022.

feet of the Project site (Appendix G). Additionally, neither EnviroStor nor GeoTracker have identified any sites since the completion of the Phase 1 ESA.[19, 20] The Project site is not recorded on either database. As a result, the Project would result in no impact.

9.e) LAX is the closest public airport, located approximately 1 mile north of the Project site. In compliance with legislative requirements, the Los Angeles County Airport Land Use Commission (ALUC) prepared the Los Angeles County Airport Land Use Plan (ALUP), revised on December 1, 2004. The ALUP provides for the orderly expansion of Los Angeles County's public use airports and the areas surrounding them. It is also intended to provide for the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards. In formulating the ALUP, the Los Angeles County ALUC established provisions for safety, noise insulation, and the regulation of building height in areas adjacent to each of the county's public airports. The Project site is not located within the LAX noise contour or airport influence area, which the ALUP defines as an area where current or future airport-related noise, overflight, safety, and/or airspace protection factors may significantly affect land uses or necessitate restrictions on those uses. Notwithstanding this, due to the proximity of the airport, the proposed structure height of 69'-5" might exceed the 100:1 imaginary surface from the edge of the runway. In accordance with 14 CFR Part 77 § 77.9, the applicant is required notify the FAA 45 working days prior to the commencement of construction to ensure to identify and address any aeronautical hazards. In summary, the Project would result in less than significant impact.

9.f) The El Segundo Standardized Emergency Management System Emergency Operations Plan (EOP) addresses the City's planned response to extraordinary emergency situations and incorporates the Emergency Operations Center, phone systems, and other infrastructure changes that occurred since the first edition of the plan was created. The objective of the EOP is to centralize coordination of all necessary personnel and facilities of the City into an organization capable of responding to any emergency. The EOP addresses the four fundamental elements of comprehensive emergency management: Mitigation; Preparedness; Response; and Recovery. The proposed Project would have no impact on the City's EOP.

During construction, Grand Avenue would remain open and existing driveways entering and exiting the property would remain accessible to emergency vehicles. The Project would be required to obtain approval from the El Segundo Fire Department to verify that the Project complies with all applicable Fire Code requirements, which would ensure that adequate emergency vehicle access would be provided. During long-term operation, adequate access for emergency vehicles to connected roadways (East Grand Avenue) adjacent to the Project site would be available via the existing driveways. Thus, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Impacts in this regard are less than significant and no mitigation would be required.

19 California Department of Toxic Substances Control. EnviroStor Database. Available at https://www.envirostor.dtsc.ca.gov/public/map/?myaddress=1950+E+Grand+Avenue+El+Segundo+CA

20 State Water Resources Control Board. GeoTracker Database. Available at https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=1950+E+Grand+Avenue+El+Segundo+CA

9.g) Since the previously developed Project site is located in a highly urbanized area where there are no wildlands, development of the proposed Project would not expose buildings or people to wildland fire hazards. Thus, no impact would occur.

10. HYDROLOGY AND WATER QUALITY

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	☐	☒	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site;	☐	☐	☒	☐
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-or off-site;	☐	☐	☐	☒
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv) Impede or redirect flood flows?	☐	☐	☐	☒
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

Explanation of Checklist Responses

10.a, c) The Project site has been fully developed, including the existing office building, parking structure, and the paved parking lot. The Project includes the new construction of an office building and parking structure, as well as a landscaped outdoor plaza area. The Project would be required to prepare a grading and drainage plan to allow for proper stormwater drainage, and the Project will include development techniques, such as use of landscaping vegetative cover, pervious ground cover (e.g., planted steps, drivable grass, pea gravel, mulches), drywells, and other BMPs to encourage infiltration and reduce runoff, as provided in the Project Preliminary LID Report (Appendix F).

Section 402 of the federal Clean Water Act requires National Pollutant Discharge Elimination System (NPDES) permits for stormwater discharges from storm drain systems

to waters of the United States.[21] The City of El Segundo is a co-permittee of the Los Angeles County MS4 permit (Order No. R4-2012-0175-A01; NPDES No. CAS004001), which was adopted November 8, 2012, and amended November 23, 2016, by the State Water Resources Control Board (WQ2015-0075).

The proposed Project would be subject to the requirements of the Municipal NPDES Permit and the City's Municipal Code, which incorporates by reference the County of Los Angeles Low Impact Development (LID) Ordinance (Ordinance Number 2013-0044).[22] The ESMC requires application of erosion and sedimentation control BMPs during construction for proper water quality management. Erosion control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. BMPs must be designed to prevent erosion and construction pollutants from entering the City's storm drain and receiving waters. As part of its normal project approval and construction oversight activities, the City of El Segundo monitors compliance with stormwater BMP requirements.

The Los Angeles County MS4 Permit also requires that stormwater pollution prevention plans (SWPPPs) be prepared for all construction projects with disturbed areas of 1 acre or greater. The statewide NPDES Construction General Permit maintained by the State Water Resources Control Board also requires a SWPPP for construction projects that involve 1 or more acres of land disturbance. The SWPPP is required to outline the BMPs that would be incorporated during construction.[23] These BMPs would minimize construction-induced water pollutants by controlling erosion and sediment, establishing waste handling/disposal requirements, and providing non-stormwater management procedures.

Further, the Los Angeles Regional Water Quality Control Board prepares and maintains a basin plan which identifies narrative and numerical water quality objectives to protect all beneficial uses of the waters of that region. The basin plan strives to achieve the identified water quality objectives through implementation of Waste Discharge Requirements and by employing three strategies for addressing water quality issues: control of point source pollutants, control of nonpoint source pollutants, and remediation of existing contamination. The Project site is located in the Los Angeles region and is, therefore, covered under the Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan).

Point sources of pollutants are well-defined locations at which pollutants flow into water bodies (discharges from wastewater treatment plants and industrial sources, for example). These sources are controlled through regulatory systems including permitting under California's Waste Discharge Requirements and the NPDES program; permits are issued by the appropriate Regional Water Quality Control Board and may set discharge limitations or other discharge provisions. According to the Basin Plan, nonpoint sources of pollutants in runoff are typically caused by rain or irrigation and have been classified by the USEPA into one of the following categories: agriculture, urban runoff, construction, hydromodification, resource extraction, silviculture, and land disposal.

21 Storm drainage systems are described as municipal separate storm sewer systems (MS4s) and include streets, gutters, conduits, natural or artificial drains, channels, and watercourses or other facilities that are owned, operated, maintained, or controlled by a permittee and used for purposes of collecting, storing, transporting, or disposing of stormwater.

22 El Segundo Municipal Code, Title 5, Chapter 7, 5-7-8, Best Management Practices (BMPs) and Title 5, Chapter 4, Stormwater and Urban Runoff Pollution Control.

23 El Segundo Municipal Code, Title 5, Chapter 4, 5-4-9, Construction Activity Stormwater Measures

Runoff from the proposed Project would consist only of non-point sources, during construction and over the operating life of the fully developed site, as discussed below.

The Project could have both short- and long-term impacts on water quality. Short-term impacts would occur during the construction phase of the Project, when the pollutants of greatest concern are sediment, which may run off the Project site due to site grading or other site preparation activities, miscellaneous solid and liquid wastes that may not be properly collected and stored, and hydrocarbon or fossil fuel remnants from the construction equipment. In addition, on-site watering activities to reduce airborne dust could contribute to pollutant loading in surface runoff.

However as indicated above, the Project applicant would be subject to the requirements of the Los Angeles County MS4 permit and the City's Municipal Code. Specifically, construction runoff is regulated by the NPDES Construction General Permit, discussed above, which requires identification of various water quality control BMPs to be specified on construction plans and implemented throughout construction. Such BMP requirements may include, but would not be limited to, containing stormwater runoff on-site during rain events, limiting grading during the wet season, covering slopes susceptible to erosion, and retaining non-stormwater runoff on-site (e.g., runoff from vehicle washing). Through these existing, mandatory regulatory compliance measures, potential water quality impacts during construction would be avoided or reduced to less than significant levels and would avoid conflicts with water quality standards established by the Regional Water Quality Control Board.

Long-term impacts would result from operation of the completed Project, with waste material dumped into storm drain inlets having the potential to adversely impact surface water and groundwater. Anticipated pollutants of concern likely generated by Project operation would be those related to commercial office uses. Building materials can potentially contribute to pollutants of concern for stormwater runoff through leaching. Building construction materials, roofing, and fencing materials may be sources of metals in stormwater runoff, especially due to acidic precipitation. Stormwater runoff from areas where refuse is stored or handled could inadvertently transport trash to storm drain inlets, channels, and/or receiving waters. Oil and grease buildup in parking areas, drive aisles, and driveways is a form of contaminant that could be captured in site runoff and flow into the City's storm drains. Landscaping practices could produce pollution through irrigation runoff and by allowing pollutants to enter the storm drainage system. Discharges from the Project site could thus produce polluted runoff that could enter the municipal storm drain system.

While the Project would generate stormwater runoff during Project operation, as described above, the proposed landscaping and infiltration design, which is provided in the Project Preliminary LID Report (Appendix F), would maintain the volume of runoff as the existing Project site, but would better balance the storm drain flows between the property addresses. Further, the Project would be required to have a stormwater management system that is designed to comply with the City of El Segundo's LID requirements, which state that the first flush (resulting from the 85th percentile annual rainstorm) would need to be infiltrated in the soils via infiltration wells, captured in a cistern and treated for on-site reuse, or filtered through bioretention planters and released. Therefore, the Project would not substantially alter the existing drainage pattern of the Project site.

As shown on the Project Preliminary LID Report (Appendix F), the Project would include dry wells at the low point of each drive aisle to treat and infiltrate the 85th percentile storm design capture volume per LA County guidelines. The western portion of the site will capture surface flows, including from roof drains, from the proposed building. The proposed building will have two 6-inch connections with a total flow of 650 gallons per minute (gpm). The existing catch basins at the low point of the western drive aisle will remain to capture flows form the drive aisle and area drains within the courtyards will also capture runoff. Flows from the western lot will be collected and conveyed to the northwest portion of the site where the existing 18-inch line connects to the existing public 36-inch main in Grand Avenue. The western portion of the site will have a Q25 flow rate of 1,615 gpm. The eastern connection will capture surface flows, including roof drains from the proposed parking structure. The proposed parking structure will have two 6-inch connections with a total flow of 550 gpm. The catch basins at the low point of the eastern drive aisle will remain to capture flows from the drive aisle and area drains within the courtyards will also capture runoff. Flows from the eastern lot will be collected and conveyed to the northeast portion of the site where the existing 15-inch line connects to a catch basin in Grand Avenue that then connects to the public 36-inch storm drain main. The eastern portion of the site will have a Q25 flow rate of 1,615 gpm.

The Project's operation would result in an increase in the amount of impermeable surfaces as compared with existing conditions due to the construction of two new structures. However, the site runoff would be better balanced between the eastern and western portions. Further, the proposed volume control, treatment, and maintenance BMPs specified in the LID would sufficiently minimize the potential water pollution impacts of site runoff. Although the proposed Project may result in some minor alteration of existing on-site drainage patterns, stormwater would continue to be directed toward Grand Avenue, and the storm drain system that serves the current Project site would remain sufficient. Therefore, the proposed Project would not result in flooding, would not create runoff that would exceed the capacity of the storm drain system, and would not be a substantial additional source of polluted runoff.

The Project site is not located within a 100-year floodplain boundary, as identified by the Flood Insurance Rate Maps prepared by the Federal Emergency Management Agency.[24] Since the Project would not be located within a 100-year flood hazard area, development of the proposed Project would not expose people or structures to significant flood hazards and would not impede or redirect flood flows.

In short, implementation of the best management practices identified above would be sufficient to limit water pollution impacts in site runoff and ensure that the developed site would not result in polluted runoff which would violate applicable water quality standards. Further, as the existing drainage pattern of the Project site would not be substantially altered by the proposed development, the Project would not result in excessive sedimentation, redirected flood flows, or other impacts resulting from a change in drainage patterns. As such, Project impacts would be less than significant and no mitigation measure is required.

24 FEMA. FIRM Panel 06037C1767G. Accessed online on January 28, 2022 at: https://hazards-fema.maps.arcgis.com/apps/webappviewer/index.html?id=8b0adb51996444d4879338b5529aa9cd.

10.b) The Project site is located within the jurisdiction of the West Basin Municipal Water District (West Basin MWD). West Basin MWD purchases imported water from the Metropolitan Water District of Southern California and wholesales the imported water to cities and private companies in southwest Los Angeles County, including El Segundo. Water utility service to the Project site is provided by the El Segundo Public Works Department Water Division. According to the West Basin MWD's 2020 Urban Water Management Plan (UWMP), the 2020 water supply consisted of: 15 percent groundwater; 75 percent imported water; 11 percent recycled water; and less than 1 percent desalinated water.[25]

The groundwater supply is extracted from the West Coast Groundwater Basin, which covers approximately 140 square miles and underlies much of the West Basin MWD's service area, including El Segundo. The average amount of water extracted from the groundwater basin is approximately 30,100 acre-feet per year. Because the basin is adjudicated (i.e., the amount to be extracted each year has been determined by a court decision), the rights to the amount of groundwater extracted each year remain virtually the same. The Water Replenishment District of Southern California (WRD) is responsible for maintaining and replenishing the basin. Natural replenishment of the basin's groundwater supply occurs through the underflow from the Central Groundwater Basin and limited local precipitation. Artificial replenishment of the basin, which is the responsibility of the WRD, occurs through a mix of imported and recycled water. Groundwater recharge through surface spreading occurs at the following locations: Montebello Forebay Spreading Grounds adjacent to Rio Hondo and the San Gabriel River, within the unlined portion of the San Gabriel River, and behind the Whittier Narrows Dam in the Whittier Narrows Reservoir.[26]

The Project would not install any groundwater wells and would connect to the existing municipal water system. In addition, there are no aquifer conditions or recharge features at the Project site or in the surrounding area that could be affected by excavation or development of the Project. Stormwater that percolates into the substrate in the Project area remains in the upper layers of soil. The Project's addition of dry wells for stormwater capture would allow stormwater to percolate into the soil. Therefore, the Project would not impede percolation of stormwater into the underlying substrate and impacts would be less than significant and no mitigation would be required.

10.d) According to the California Geological Survey Los Angeles County Tsunami Inundation Maps, the Project site is not located within a tsunami inundation area.[27] There are no bodies of water located on or near the Project site, therefore, inundation caused by a seiche would not occur. Thus, there would be no impact.

10.e) As discussed in the response to 10.a, the Project is designed to be consistent with the LA Basin Plan, Statewide NPDES General Construction Permit and Municipal Code/LA County LID Standards for water quality control, for both construction and site improvements. As mentioned above, the West Basin MWD's 2020 UWMP states that the 2020 water supply consists of: 15 percent groundwater; 75 percent imported water; 11

25 West Basin Municipal Water District, *2015 Urban Water Management Plan*.
26 Water Replenishment District. 2020. Regional Groundwater Monitoring Report: Water Year 2018-2019, Central and West Coast Basins, Los Angeles County, California.
27 California Emergency Management Agency, 2009. *Tsunami Inundation Map for Emergency Planning, Venice Quadrangle.*

percent recycled water; and less than 1 percent desalinated water.[28] The groundwater supply that serves El Segundo is extracted from the West Coast Groundwater Basin. The WRD is responsible for maintaining and replenishing the basin. Natural replenishment of the basin's groundwater supply occurs through the underflow from the Central Groundwater Basin and limited local precipitation. Artificial replenishment of the basin, which is the responsibility of the WRD, occurs through a mix of imported and recycled water at the Montebello Forebay Spreading Grounds, within the unlined portion of the San Gabriel River, and behind the Whittier Narrows Dam in the Whittier Narrows Reservoir.[29]

Because the Project would not affect any of the regional groundwater management measures noted above, and because it would not involve the use, disposal, or storage of hazardous chemicals that could impact groundwater quality, the proposed Project would have a less than significant impact on the WRD's groundwater management and replenishment activities.

28 West Basin Municipal Water District. 2016. *2015 Urban Water Management Plan*.

11. LAND USE AND PLANNING

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Physically divide an established community?	☐	☐	☐	☒
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒

Explanation of Checklist Responses

11.a) The Project site is developed with existing office uses and a parking structure, and the proposed Project would continue these uses. The Project site is bordered by office, hotel, and restaurant land uses, within a developed area of the City, with fully developed urban infrastructure systems in place, including major arterial and local streets, water, sewer, storm drainage, and energy distribution facilities. The nearest residence and residential community is located at the multifamily homes at the northwest corner of Holly Avenue and Indiana Street that are located as near as 1,150 feet northwest of the Project site (refer to Figure 3). The Project site is not located within or directly adjacent to any residential areas, and all proposed improvements would occur within the limits of the Project site. Therefore, the Project would not physically divide an established community, and there would be no impact.

11.b) The City of El Segundo's General Plan and Zoning Ordinance govern the land use of the Project site and surroundings; there are no other governmental authorities with land use control over this project. Development of the proposed Project would not conflict with any plans, policies, or regulations of the City that are intended to avoid or mitigate an environmental effect. No changes are proposed to the existing Corporate Office General Plan land use designation and Corporate Office zoning designation of the Project property. As such, the Project would have no impact involving a conflict with local or regional land use plans, policies, programs, or regulations.

12. MINERAL RESOURCES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Explanation of Checklist Responses

12.a) As described in the General Plan Conservation Element, the City has been associated with petroleum resource development dating back to its founding in 1911. The City is partially underlain by the El Segundo Oil Field, where over 14 million barrels of oil and condensate were produced locally between 1935 and 1992, although production steadily declined from 1967. The Project site is located within the El Segundo Oil Field, which is located on the south side of Mariposa Avenue, as delineated by the California Department of Conservation, Geologic Energy Management Division (CalGEM).[30] The nearest oil well to the Project site is located directly west of the project site located at 222 N. Sepulveda Boulevard; however, this well has been categorized as a dry well, and has been plugged and abandoned, as reported by the California Department of Conservation.[31] No other types of mineral resources are identified on or near the Project site in the City's General Plan. As a result, the Project would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state. Thus, no impact would occur.

12.b) According to the City's General Plan, there are no designated Mineral Resources Zones in El Segundo. Further, the General Plan does not identify the Project site as an important mineral resource recovery site. Thus, no impact would occur.

13. NOISE

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, exposure of people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐

The following analysis is based on information contained in the *Noise Impact Analysis for the 1950-1960 E Grand Avenue Project* prepared by Vista Environmental, dated March 22, 2022. This report, hereinafter referred to as the Noise Impact Analysis, is included as Appendix H of this IS/MND.

Noise Fundamentals

Noise is generally defined as unwanted sound, and sound becomes unwanted when it interferes with normal activities or when it causes actual physical harm, including adverse effects on health. Sound pressure levels are used to measure the intensity of sound and are described in terms of decibels. The decibel (dB) is a logarithmic unit which expresses the ratio of the sound pressure level being measured to a standard reference level. A-weighted decibels (dBA) approximate the subjective response of the human ear to a broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear.

Noise Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (Leq) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. The peak traffic hour Leq is the noise metric used by California Department of Transportation (Caltrans) for all traffic noise impact analyses.

The Day-Night Average Level (Ldn) is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of ten decibels to sound levels at night between 10:00 p.m. and 7:00 a.m. While the Community Noise Equivalent Level (CNEL) is similar to the Ldn, except that it has another addition of 4.77 decibels to sound levels during the evening hours between 7:00 p.m. and 10:00 p.m. These additions are made to the sound levels at these time periods because during the evening and nighttime hours, when compared to daytime hours, there is a decrease in the ambient noise levels, which creates an increased sensitivity to sounds. For this reason, the sound appears louder in the evening and nighttime hours and is weighted accordingly. The City of El Segundo relies on the CNEL noise standard to assess transportation-related impacts on noise sensitive land uses.

Noise can be generated by a number of sources, including mobile sources, such as automobiles, trucks, and airplanes, and stationary sources, such as construction sites, machinery, and industrial operations. The rate depends on the ground surface and the number or type of objects between the noise source and the receiver. Mobile transportation sources, such as highways, and hard and flat surfaces, such as concrete or asphalt, have an attenuation rate of 3.0 dBA per doubling of distance. Soft surfaces, such as uneven or vegetated terrain, have an attenuation rate of about 4.5 dBA per doubling of distance from the source. Noise generated by stationary sources typically attenuates at a rate of approximately 6.0 to 7.5 dBA per doubling of distance from the source (EPA 1971). Construction noise levels are assumed to average 6 dBA of attenuation per doubling of distance from the source (FHWA 1978).

Human response to sound is highly individualized. Annoyance is the most common issue regarding community noise. The percentage of people claiming to be annoyed by noise generally increases with the environmental sound level. However, many factors also influence people's response to noise. The factors can include the character of the noise, the variability of the sound level, the presence of tones or impulses, and the time of day of the occurrence. Additionally, non-acoustical factors, such as the person's opinion of the noise source, the ability to adapt to the noise, the attitude toward the source and those associated with it, and the predictability of the noise, all influence people's response. As such, response to noise varies widely from one person to another, and with any particular noise, individual responses would range from "not annoyed" to "highly annoyed."

El Segundo Municipal Code

Based on the federal and state guidelines, the City established land use standards for noise, which are set forth in ESMC Title 7, Chapter 2, Noise and Vibration. The relevant sections of the chapter are presented below.

Section 7-2-4, Noise Standards. This section establishes the standard for commercial and industrial property as 8 dBA above the ambient noise level. The standard for residential property is 5 dBA above the ambient noise level.

Section 7-2-10, Exemptions. As cited in this section, the following activities are exempt from the provisions of this chapter:

D. Construction Noise: Noise sources associated with or vibration created by construction, repair, or remodeling of any real property, provided said activities do not take place between the hours of six o'clock (6:00) P.M. and seven o'clock (7:00) A.M. Monday through Saturday, or at any time on Sunday or a Federal holiday, and provided the noise level created by such activities does not exceed the noise standard of sixty five (65) dBA plus the limits specified in subsection 7-2-4C of this Chapter as measured on the receptor residential property line and provided any vibration created does not endanger the public health, welfare and safety.

For construction noise, a "substantial" noise increase can be defined as interference with activities during the day and night. One indicator that construction noise could interfere with daytime activities would be speech interference.

Nearest Sensitive Receptors and Existing Noise Conditions

The nearest sensitive receptors to the Project site are guests at the hotel located as near as 10 feet south of the Project site, and the nearest residences are the multifamily residents located

at the intersection of Holly Avenue and Indiana Street as near as 1,150 feet northwest of the Project site. To determine the existing noise levels, noise measurements have been taken in the vicinity of the Project site. The noise measurements were recorded between 11:50 AM on July 21, 2021 and 12:02 PM on July 22, 2021. It should be noted that the noise measurements were taken during the COVID-19 pandemic; therefore, the measured baseline ambient noise levels are lower and hence more conservative than during normal conditions due to reduced activity in the area. The results of the noise level measurements are presented in Table 13-1. The measured sound pressure levels in dBA have been used to calculate the minimum and maximum L_{eq} averaged over 1-hour intervals. Table 13-1 also shows the L_{eq}, L_{max}, and CNEL, based on the entire measurement time.

Table 13-1. Existing (Ambient) Noise Level Measurements

Site No.	Measurement Location Description	Average (dBA L_{eq})		1-hr Average (dBA L_{eq}/Time)		Average (dBA CNEL)
		Daytime[1]	Nighttime[2]	Minimum	Maximum	
1	Located on a tree near the northwest corner of Project site, approximately 80 feet south of Grand Avenue centerline.	60.4	53.6	47.1 3:58 AM	64.3 7:30 PM	62.8
2	Located on a tree near the northwest corner of Project site, approximately 80 feet south of Grand Avenue centerline.	55.0	51.0	49.5 3:28 AM	62.2 8:23 AM	58.5
3	Located on a tree approximately 5 feet north of the south property line, near the middle of the Project site.	54.2	51.2	49.0 2:34 AM	57.4 5:31 PM	58.5

Notes:
[1] Daytime is defined as 7:00 a.m. to 10:00 p.m. (Section 7-2-8(A) of the Municipal Code)
[2] Nighttime defined as 10:00 p.m. to 7:00 a.m. (Section 7-2-8(A) of the Municipal Code)
Source: Noise Report, see Appendix H.

Explanation of Checklist Responses

13.a) The following sections evaluate the noise sources and levels associated with the temporary construction activities and long-term operations of the proposed Project and compares the noise levels to the City standards.

Short-Term Construction Impacts

The noise impacts from the Project construction have been analyzed through use of the FHWA's Roadway Construction Noise Model (RCNM). Construction activities are anticipated to include site preparation, consisting of removal and rough grading of the existing surface parking lot, grading and foundation construction, office building and parking structure construction, application of architectural coatings, and paving and site improvements. Noise impacts from the Project construction activities would be a function of the noise generated by construction equipment, equipment location, sensitivity of nearby land uses, and the timing and duration of the construction activities.

Section 7-2-10(D) of the City's Municipal Code exempts construction noise from the City noise standards provided that construction activities occur between 7:00 a.m. and 6:00 p.m., except Sundays and Federal holidays and such activities do not exceed 65 dBA at the nearby residential properties.

Construction noise impacts to the nearby sensitive receptors have been calculated with the results summarized below in Table 13-2.

Table 13-2. Construction Noise Levels at the Nearby Sensitive Receptors

	Construction Noise Level (dBA Leq) at:	
Construction Phase	Hotel to South[1]	Nearest Homes to Northwest[2]
Site Preparation	72	58
Grading	71	57
Building Construction	72	58
Paving/Site Improvements	70	56
Architectural Coatings	59	45
Construction Noise Threshold[3]	85	65
Exceed Thresholds?	No	No

Notes:
1 The hotel to the south is located as near as 270 feet from the center of the Project site.
2 The nearest homes to the northwest are located as near as 1,375 feet from the center of the Project site.
3 The construction noise threshold for the hotel to south obtained from the FTA Manual and for the nearest homes obtained from Section 7-2-10(D) of the Municipal Code.
Source: Noise Report, see Appendix H.

Table 13-2 shows that greatest construction noise impacts would be as high as 72 dBA Leq during the Site Preparation and Building Construction phases at the hotel directly south of the Project site and 58 dBA at the nearest homes to the northwest of the Project site. Section 7-2-10(D) of the City's Municipal Code exempts construction noise from the City noise standards provided that construction activities occur between 7:00 a.m. and 6:00 p.m., except Sundays and Federal holidays and such activities do not exceed 65 dBA at the nearby residential properties. Since the City's construction noise standards do not provide any noise standards for impacts to the nearby commercial uses, that include the hotel to the south, the construction noise threshold of 85 dBA Leq for commercial uses from the FTA Manual, has been utilized in order to provide a conservative analysis. All calculated construction noise levels shown in Table 13-2 are within the construction noise standards of 85 dBA and 65 dBA, respectively. Therefore, through adherence to the limitation of allowable construction times provided in Section 7-2-10(D) of the Municipal Code, construction-related noise levels would not exceed any standards established in the General Plan or Noise Ordinance nor would construction activities create a substantial temporary increase in ambient noise levels from construction of the proposed Project. Impacts would be less than significant and mitigation measures are not required.

Operational Noise Sources

Potential noise impacts associated with the operations of the proposed Project would be from Project-generated vehicular traffic on the nearby roadways and from on-site activities, which have been analyzed separately below.

Roadway Traffic Noise

Vehicle noise is a combination of the noise produced by the engine, exhaust and tires. The level of traffic noise depends on three primary factors (1) the volume of traffic, (2) the speed of traffic, and (3) the number of trucks in the flow of traffic. The proposed Project does not involve any uses that would require a substantial number of truck trips and the proposed Project would not alter the speed limit on any existing roadway; therefore, the proposed Project's potential off-site noise impacts have been focused on the noise impacts associated with the change of volume of traffic that would occur.

Since neither the General Plan nor the CEQA Guidelines define what constitutes a "substantial permanent increase to ambient noise levels," this impact analysis has

utilized guidance from the Federal Transit Administration for a moderate impact that shows that the Project contribution to the noise environment can range between 0 and 7 dB, which is dependent on the existing noise levels, as shown in Table 13-3.

Table 13-3. FTA Project Effects on Cumulative Noise Exposure

Existing Noise Exposure (dBA Leq or Ldn)	Allowable Noise Impact Exposure dBA Leq or Ldn		
	Project Only	Combined	Noise Exposure Increase
45	51	52	+7
50	53	55	+5
55	55	58	+3
60	57	62	+2
65	60	66	+1
70	64	71	+1
75	65	75	0

Source: Noise Report, see Appendix H.

The potential off-site traffic noise impacts created by the ongoing operations of the proposed Project have been analyzed through utilization of the FHWA Traffic Noise Prediction Model - FHWA-RD-77-108 (FHWA Model). The proposed Project's potential off-site traffic noise impacts have been analyzed for the existing year and opening year 2024 conditions, which are discussed below.

Existing Year Conditions

The proposed Project's potential off-site roadway noise impacts have been calculated through a comparison of the existing scenario to the existing with Project scenario. The results of this comparison are shown in Table 13-4.

Table 13-4. Project Traffic Noise Contributions for Existing Year Conditions

		dBA CNEL at Nearest Receptor[1]				
Roadway	Segment	Existing	Existing Plus Project	Project Contribution	Increase Threshold[2]	Significant Impact?
Pacific Coast Highway	North of Grand Avenue	60.1	60.1	0.0	+2 dBA	No
Pacific Coast Highway	South of El Segundo Blvd	60.8	60.8	0.0	+2 dBA	No
Nash Street	North of Grand Avenue	57.7	57.7	0.0	+3 dBA	No
Nash Street	South of Grand Avenue	53.8	53.9	0.1	+5 dBA	No
Grand Avenue	West of Pacific Coast Hwy	67.3	67.3	0.0	+1 dBA	No
Grand Avenue	West of Continental Blvd	61.4	61.6	0.2	+2 dBA	No
El Segundo Boulevard	East of Continental Blvd	61.8	61.8	0.0	+2 dBA	No
El Segundo Boulevard	East of Nash Street	68.3	68.3	0.0	+1 dBA	No

Notes:
1 Distance to nearest residential use does not take into account existing noise barriers.
2 Increase Threshold obtained from the FTA's allowable noise impact exposures.
Source: Noise Report, see Appendix H.

Table 13-4 shows that for the existing conditions, the proposed Project's permanent noise increases to the nearby homes from the generation of additional vehicular traffic would not exceed the traffic noise increase thresholds detailed above. Therefore, the proposed Project would not result in a substantial permanent increase in ambient noise levels for the existing year conditions. Impacts would be less than significant and no mitigation measures are required.

Opening Year 2024 Conditions

The proposed Project's potential off-site roadway noise impacts have been calculated through a comparison of the opening year 2024 scenario to the opening year 2024 with Project scenario. The results of this comparison are shown in Table 13-5.

Table 13-5. Project Traffic Noise Contributions for Opening Year 2024 Conditions

		dBA CNEL at Nearest Receptor[1]				
Roadway	Segment	Year 2024	Year 2024 Plus Project	Project Contribution	Increase Threshold[2]	Significant Impact?
Pacific Coast Highway	North of Grand Avenue	60.7	60.7	0.0	+2 dBA	No
Pacific Coast Highway	South of El Segundo Blvd	61.2	61.2	0.0	+2 dBA	No
Nash Street	North of Grand Avenue	57.9	58.0	0.1	+3 dBA	No
Nash Street	South of Grand Avenue	54.0	54.0	0.0	+5 dBA	No
Grand Avenue	West of Pacific Coast Hwy	68.7	68.7	0.0	+1 dBA	No
Grand Avenue	West of Continental Blvd	62.0	62.2	0.2	+2 dBA	No
El Segundo Boulevard	East of Continental Blvd	62.7	62.8	0.1	+2 dBA	No
El Segundo Boulevard	East of Nash Street	69.1	69.2	0.1	+1 dBA	No

Notes:
1 Distance to nearest residential use does not take into account existing noise barriers.
2 Increase Threshold obtained from the FTA's allowable noise impact exposures.
Source: FHWA Traffic Noise Prediction Model FHWA-RD-77-108.

Table 13-5 shows that for the opening year 2024 conditions, the proposed Project's permanent noise increases to the nearby homes from the generation of additional vehicular traffic would not exceed the traffic noise increase thresholds detailed above. Therefore, the proposed Project would not result in a substantial permanent increase in ambient noise levels for the opening year 2024 conditions. Impacts would be less than significant and no mitigation measures are required.

On-site Noise Sources

Project operations may create an increase in on-site noise levels from noise impacts from rooftop mechanical equipment, parking lots, and delivery trucks. While the exact size of the backup generator has not yet been determined, based on similar building projects of comparable to the size of this Project, this analysis assumes a 250 kW 389 horsepower backup generator for these power requirements. As such, this analysis has analyzed the emissions created from a 250 kW 389 horsepower diesel-powered backup generator. Section 7-2-4(A) of the City's Municipal Code limits the noise created on the Project site at the nearby residential properties to the ambient noise level plus 5 dBA and Section 7-2-4(B) of the City's Municipal Code limits the noise created on the Project site at the nearby commercial and industrial properties to the ambient noise level plus 8 dBA. As mentioned previously, the nearest sensitive receptors to the Project site are the guests at the hotel located as near as 10 feet south of the Project site, and the nearest residences are the homes to the northwest that are located as near as 1,150 feet from the Project site.

In order to determine the noise impacts from the operation of rooftop mechanical equipment, parking lots, emergency backup generator, and delivery trucks, reference noise measurements for each noise source are shown in Table 13-6, and the noise levels from each source were calculated through use of standard geometric spreading of noise from a point source with a drop-off rate of 6 dB for each doubling of the distance between the source and receiver.

Table 13-6. Operational Noise Levels at Nearby Land Uses

	Reference Measurements		Hotel to South		Nearest Homes to Northwest	
Noise Source	Distance - Source to Receptor (feet)	Noise Level[1] (dBA Leq)	Distance - Source to Hotel (feet)	Noise Level[1] (dBA Leq)	Distance - Source to Homes (feet)	Noise Level[1] (dBA Leq)
Rooftop Equipment[2]	10	66.6	360	21	1,200	8
Parking Lot	5	63.1	20	48	1,150	4
Truck Delivery	30	54.3	470	25	1,150	15
Backup Generator	27	74	430	44	1,350	32
Combined Noise Levels				49		32
Ambient Noise Levels (day/night)				54/51		60/54
City Noise Standard[2] (day/night)				62/59		65/59
Exceed City Noise Standard?				No/No		No/No

Notes:
1 The noise levels were calculated through use of soft site geometric spreading of noise from a point source with a drop-off rate of 7.5 dB for each doubling of the distance between the source and receiver. Does not account for noise reduction features such as buildings and walls.
2 City Noise Standards based on ambient noise level shown previously plus 5 dB at the residential uses and plus 8 dB for the commercial uses.

Table 13-6 shows that the proposed Project's on-site operational noise from the anticipated on-site noise sources would not exceed the applicable noise standards at the hotel to the south or nearest residential homes located 1,150 feet to the northwest of the Project site. Therefore, operational on-site noise impacts would be less than significant and no mitigation measures are required.

13.b) Project construction can generate varying degrees of groundborne vibration, depending on the construction procedure and the equipment used. Operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. The effect on buildings located in the vicinity of a construction site often varies depending on soil type, ground strata, and construction characteristics of the receiver building(s). The results from vibration can range from no perceptible effects at the lowest vibration levels to low rumbling sounds and perceptible vibration at moderate levels, to slight damage at the highest levels. Groundborne vibrations from construction activities rarely reach levels that damage structures.

The types of construction vibration impact include human annoyance and building/property damage. Human annoyance occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience any cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on the soil composition and underground geological layer between the vibration source and the receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment.

The following section analyzes the potential vibration impacts associated with the construction and operations of the proposed Project.

Construction-Related Vibration Impacts

The Project construction activities are anticipated to include site preparation, grading, building and parking structure construction, application of architectural coatings, and paving and site improvements. Vibration impacts from construction activities would typically be created from the operation of heavy off-road equipment. The nearest off-site structure where people may sit, which makes them much more susceptible to vibration, would be the commercial office uses, located adjacent to the Project site to both the east and west.

Section 7-2-9 of the City's Municipal Code restricts the creation of vibration which is perceptible without the use of instruments to any reasonable person on normal sensitivity. However, since neither the Municipal Code nor the General Plan provides a quantifiable vibration threshold level, Caltrans guidance has been utilized, which defines the threshold of perception from transient sources at 0.25 inch per second PPV.

The primary source of vibration during construction would be from the operation of a bulldozer, which was selected from the applicant's equipment list as the equipment generating the highest vibration levels. A large bulldozer would create a vibration level of 0.089 inch per second PPV at 25 feet. Based on typical propagation rates, the vibration level at the nearest adjacent structures (20 feet away) would be 0.11 inch per second PPV. The vibration level at the nearest off-site structure where people likely sit, would be below the 0.25 inch per second PPV threshold detailed above. Impacts would be less than significant and no mitigation measures are required.

Operations-Related Vibration Impacts

Operation of the Project is expected to require delivery trucks to the Project site, which are a known source of vibration. Project-related delivery trucks activities would be located on the northwestern portion of the Project site, where there are no vibration sensitive land uses located in the nearby proximity of where the delivery trucks would operate. As such, operations-related vibration impacts would be less than significant.

13.c) The proposed Project would not expose people residing or working in the Project area to excessive noise levels from aircraft. The nearest airport is Los Angeles International Airport that is located approximately 1 mile north of the Project site, however it should be noted that the Airport's runways run in a generally east-west direction and the Project site is located roughly perpendicular to the length of the Airport runways, so take-offs and landings do not occur over the Project site. As detailed in *3Q19 Los Angeles International Airport – California State Airport Noise Standards Quarterly Report*[32] the Project site is located outside of the 65 dBA CNEL noise contours of Los Angeles International Airport. Therefore, aircraft noise impacts would be less than significant and no mitigation measures are required.

32 Los Angeles International Airport. 2019. *3Q19 Los Angeles International Airport – California State Airport Noise Standards Quarterly Report.*

14. POPULATION AND HOUSING

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Explanation of Checklist Responses

14.a) As discussed in the responses to the Land Use and Planning thresholds in Section 11, the proposed Project is consistent with the City of El Segundo General Plan land use policies, which designate the Project site for office uses. No housing units would be developed as part of the Project, and no new or expanded urban infrastructure would be constructed that could foster increased development intensity on-site or at surrounding properties. Similar to other construction projects in the region, the Project construction workers are expected to be drawn from the large, available regional labor force, who would commute to the Project site during the construction stages. The Project would provide an additional 93,559 net square feet of office space for an estimated maximum of 325 employees. To be conservative, this analysis uses the 2019 CBC Table 1004.5 for occupant load, which calculates the maximum total occupants for office use at a ratio of 1 person/150 square feet. Based on the CBC office use ratio, the Project is calculated to provide office space for up to an additional 624 people.

Based on the Project vehicle miles traveled (VMT) of 19.3 miles, which represents the average distance each employee would travel in an automobile to the Project site, as analyzed in Section 17, Transportation, it is anticipated that the majority of workers employed at the Project would commute to rather than relocate to the Project area, Additionally, the Project's close proximity to the Metro Station (approximately 0.5 mile to the northeast at Mariposa Avenue and Nash Street) would also facilitate commuters using public transit. Further, based on the State of California Employment Development Department Labor Force data, the unemployment rate in El Segundo was 6.6 percent in December 2021, which is 0.4 percentage point higher than the overall county unemployment rate of 6.2 percent (EDD 2022). Based on this data, it is also possible that the Project would provide employment opportunities to the local inhabitants in El Segundo in a variety of occupations, including maintaining or being employed at the offices in the Project.

To be conservative and assume that up to 5 percent, or approximately 32 of the additional future employees relocate to El Segundo, it is expected that based on the number of available or vacant housing units, which was 325 units in 2020 (U.S. Census 2020, the existing housing would sufficiently accommodate the estimated number of future employees who would relocate to El Segundo and require 9.8 percent of the vacant housing. This Project does not, therefore, represent unplanned growth.

Therefore, the Project would result in a less than significant impact to directly or indirectly induce unplanned population growth in the City.

14.b) There is no existing housing on the Project site, which is currently zoned and in use for Corporate Office. Construction and renovation of the proposed buildings, therefore, would not displace any people or housing. Thus, the Project would not necessitate the construction of replacement housing elsewhere and there would be no impact.

15. PUBLIC SERVICES

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

iv) Parks?	☐	☐	☒	☐
v) Other public facilities?	☐	☐	☒	☐

Explanation of Checklist Responses

15.a.i) The El Segundo Fire Department (ESFD) provides fire protection and emergency medical services to the Project area. The ESFD maintains 14 firefighters on duty 24 hours a day, 7 days a week. The City is divided into two districts for fire response, with Pacific Coast Highway as the dividing line. Station 1 responds to calls west of Pacific Coast Highway and Station 2 responds to calls east of Pacific Coast Highway. Depending on the nature of the emergency request, units may cross over into the other district and coordinate resources to assist in response activities.[33] The Project site is located within Station 2's fire response district. Station 2 is located at 2261 E. Mariposa Avenue, approximately 0.5 mile from the Project site, and includes one fire engine, one fire truck, and one paramedic unit. Station 1 (headquarters at the Civic Center Complex) is located at 314 Main Street, approximately 1.2 miles from the Project site.

The Project would result in increased square footage of commercial office space and an increase in the number of employees on the Project site as compared with current conditions; however, the Project would not create any new uses that could not be served by existing ESFD equipment and personnel. Additionally, the Project construction designs for both the office building and parking structure would be required to comply with ESMC fire protection requirements to reduce fire hazards associated with the buildings. The ESFD has review and approval authority over building plans in subsequent phases of construction design to ensure adherence with fire department regulations and requirements. Additionally, ESMC Title 15, Chapter 27A, Section 15-27A-2, establishes the City's ability to impose development impact fees, which requires new development projects to pay their fair share of cost to offset a project's impact on

33 City of El Segundo, Fire Department, *Suppression Frequently Asked Questions.*

public services, including fire suppression facilities, law enforcement facilities, and libraries. Resolution No. 4687 establishes the City's development impact fee rates for police, fire, library, and park facilities. The amount of each impact fee is generally calculated based on the gross square footage of nonresidential development or other appropriate methodology which ensures that the fee is roughly proportional to the impacts of new development on public facilities. As such, the Project is not anticipated to affect fire protection demands to the extent that new or physically altered fire facilities would be required. Impacts on fire protection serves are anticipated to be less than significant and no mitigation measures are required.

15.a.ii) The El Segundo Police Department (ESPD) provides police protection in the City. The Department's headquarters are located at 348 Main Street at the Civic Center Complex, approximately 1.2 miles west of the Project site. The City is divided into two geographic areas bisected by Pacific Coast Highway. The area west of Pacific Coast Highway is designated the West Command and the area east of Pacific Coast Highway is designated the East Command. The Project site is located within the East Command. The ESPD is staffed by a total of approximately 62 sworn officers, 20 administrative personnel, and volunteers.[34] The Project does not involve housing development or growth-inducing effects, as discussed in Section 14, that would increase service population demands for law enforcement.

The Project would increase the number of employees on the Project site through the construction of a new, 5-level office building. Because the Project site already contains an office building, and the Project site is surrounded by commercial office uses, the Project would not create a unique land use that would result in new or expanded sources of crime. Further, the ESPD is involved in the City's review of new development plans and provides specific recommendations to improve safety and security and the ability to respond to law enforcement incidents through various project design features. Examples of such recommendations typically pertain to lighting; landscaping; monitoring and surveillance devices; address signs; doors and hardware; etc. Additionally, as mentioned above, the Project would be assessed development impact fees, which represent a project's fair share costs to the City for public services and facilities, including law enforcement. Thus, the Project is not expected to substantially affect police protection needs or service ratios and would not result in the need for new or physically altered police facilities. As such, impacts would be less than significant and no mitigation measures are required.

15.a.iii) The Project site is located within the Wiseburn Unified School District and Centinela Valley Union High School District boundaries. Wiseburn Unified School District provides transitional kindergarten, elementary, and middle school public education services in El Segundo, as well as the DaVinci charter high school. The School District is comprised of three elementary schools (Juan Cabrillo Elementary, Juan De Anza Elementary, and Peter Burnett Elementary), one middle school (Richard Henry Dana Middle School), and one middle school-high school (Success Learning Center). Centinela Valley Union High School District is comprised of five high schools: Hawthorne High School, Lawndale High School, Leuzinger High School, Lloyde High School, and Centinela Valley Independent Study School. The school and enrollment data for both districts are presented in Table 15-1.

34 City of El Segundo. 2021. *Adopted Operating & Capital Improvement Budget, Fiscal Year 2020-2021*.

Table 15-1. Wiseburn School District School and Centinela Valley Union High School District Enrollment Data (2020-2021)

School	Grades	Total Enrollment (2020-2021)
Wiseburn School District		
Juan Cabrillo Elementary	K-2	469
Juan De Anza Elementary	K-5	583
138th School	3-5	444
Richard Henry Dana Middle School	6-8	978
Success Learning Center	6-12	23
Centinela Valley Union High School District		
Hawthorne High School	9-12	1,797
Lawndale High School	9-12	2,077
Leuzinger High School	9-12	1,867
Lloyde High School	10-12	282
Centinela Valley Independent Study School	9-12	23

Source: California Department of Education, 2020-2021 School Accountability Report Card (2020-2021 SARC), https://www.cde.ca.gov/ta/ac/sa/.

The Project would construct a 5-story office building and a 258-space parking structure. As such, the Project would result in the increase of the total number of employees by approximately 624 on the Project site as compared with current conditions. While most future employees are expected to commute, rather than relocate, to El Segundo, based on a conservative assumption that 5 percent or 32 of the future employees would move to El Segundo, these future employees may have children who would attend school at the Wiseburn School District, Centinela Valley School District, or neighboring El Segundo Unified School District facilities. Based on the current school district status, it is expected that the schools may accommodate additional students from the 32 future employees. Further, the Project would be subjected to levied developer fees applicable to both new construction and reconstruction projects, pursuant to Education Code Section 17620, to support school facilities. Because there are no residential units associated with the Project and the Project would result in insignificant growth-inducing effects as mentioned in Section 14, the Project would not have a direct impact on school facilities. As such, the Project would result in a less than significant impact to public school facilities and no mitigation would be required.

15.a.iv) The Project does not involve residential development or other effects to increase housing growth, and, with a conservatively assumed additional 32 employees who would relocate to El Segundo, would not significantly increase demands for park facilities. As such, the Project would not affect the City's parkland to population ratio, which is set forth at 5 acres per 1,000 population, based on the El Segundo General Plan Open Space and Recreation Element. The City maintains a park and recreation inventory totaling approximately 91 acres (LAWA 2019). Based on the U.S. Census population estimate of 16,610 inhabitants in 2019, the City's parkland to population ratio is 5.5 acres per 1,000 population, exceeds the General Plan parkland performance standard. Additional park users resulting from the estimated 32 relocated employees are expected to be accommodated without exceeding the 5 acres to1,000 population parkland to population ratio. While the Project would increase the number of employees on the site as compared with existing conditions, the proposed Project design also provides an enhanced outdoor plaza area for employee use. The plaza would be centrally located among the office buildings and parking structures, and would be designed with wood seating and landscaping, including 74 trees of varying species, and a variety of native and climate-adapted shrubs and groundcovers. The plaza would provide employees with a means to spend time in a beautified outdoor setting with shading and seating amenities and would be expected to decrease the

demand that employees would have on neighborhood or regional parks. As a result, the Project would result in a less than significant impact and no mitigation would be required.

15.a.v) The El Segundo Public Library is located at 111 West Mariposa Avenue, approximately 1.4 miles west of the Project site, and provides library services to the City. Outdoor gathering places and public amenities, such as those provided by the Joslyn Center Senior Center and the George E. Gordon Clubhouse, are located approximately 1 mile west of the Project site. As stated above, the Project would not involve residential development or significant growth-inducing effects that have the potential to increase the demand for other public services, such as libraries and community centers, to the extent where new or physically altered facilities would be required. As such, the Project would result in a less than significant impact to other municipal facilities and no mitigation would be required.

16. RECREATION

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

Explanation of Checklist Responses

16.a) The existing Project site has been developed since 1987 with the western half used for surface and parking structure parking, while the northeastern portion has been used for corporate offices. The nearest recreational facility is the Raytheon Employee Park, approximately 620 feet south of the Project site, located on the southeast corner of the intersection of the Pacific Coast Highway and El Segundo Boulevard. This park, which is a private park, is separated from the Project site by El Segundo Boulevard and hotel uses. The nearest public park, Freedom Park, is approximately 1,500 feet northwest of the Project site, located north of Holly Avenue and east of Illinois Street. This park is separated from the Project site by Pacific Coast Highway, office, and other commercial uses. As stated above, construction of the new office building and parking structure would not involve residential development; thus, it would not generate a direct demand on recreational facilities. Further, the Project would provide employees of on-site office uses with outdoor seating areas and a plaza, thus continuing to provide passive outdoor amenity uses onsite and decreasing the demand that employees might have on neighborhood or regional parks, such as Freedom Park. Therefore, the proposed Project would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. Impacts in this regard would be less than significant.

16.b) As stated above, the Project is not anticipated to substantially increase the demand on municipal parks and recreation facilities in the City, thus requiring construction or expansion of recreational facilities. The Project itself would include a central plaza surrounded by the two parking structures and two office buildings, and the plaza would be enhanced with decorative landscaping and multiple seating areas for use by employees on the site. Environmental impacts associated with the construction of the Project's outdoor gathering spaces are included in the Project analysis throughout this Initial Study. Therefore, there would be no additional impacts associated with constructing these outdoor recreation amenities beyond those already discussed in this Initial Study. As such, the Project would result in no impacts.

17. TRANSPORTATION

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	☒	☐
b. Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	☐	☒	☐	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d. Result in inadequate emergency access?	☐	☐	☒	☐

Explanation of Checklist Responses

The discussion and analysis in this section are based on the Transportation Impact Analysis (TIA) for the proposed Project prepared by Fehr & Peers (April 2022; see Appendix I).

17.a) The Project is proposed at an existing developed site in the urban portion of El Segundo near Pacific Coast Highway (PCH) and along Grand Avenue that is well-served by public transit systems. The Project site is located within in a Transit Priority Area (TPA).[35] Specifically, the Project site is located within 0.5 miles of an existing major transit stop, less than 0.5 miles from the Los Angeles County Metropolitan Transportation Authority (Metro) C Line El Segundo and Mariposa Stations. The Metro C (Green) Line is a light rail line running between Redondo Beach and Norwalk in Los Angeles County that operates on a scheduled 12-minute frequency in both the a.m. and p.m. frequency in both the a.m. and p.m. peak periods during weekdays. Additional transit lines in the vicinity of the Project site include: Metro Line 232, which provides local service between the City of El Segundo and downtown Long Beach, runs along PCH east of the Project site in the study area and provides a bus stop on Grand Avenue/Continental Blvd in the westbound direction; LADOT Commuter Express 574, which provides express service from Encino to the City of Hawthorne along PCH and El Segundo Boulevard, east and south of the Project site, and provides the most direct connection to the Project site, providing a bus stop in both directions on Grand Avenue near Continental Blvd; Torrance Transit Line 7, which provides service between the City of Torrance and Los Angeles International Airport (LAX), and runs along Nash Street to the east of the Project site; Beach Cities Line 109, which provides local service between the City of Redondo Beach and LAX and runs west of the Project site along PCH; El Segundo Lunchtime Shuttle, which connects El Segundo's business areas westward to Downtown El Segundo and passes along Grand Avenue directly in front of the Project site, however, service is

35 SCAG defines Transit Priority Areas (TPAs) as Priority Growth Areas that are within one half mile of existing or planned 'major' transit stops in the region. A 'major' transit stop is defined as a site containing an existing or planned rail or bus rapid transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods. Although TPAs comprise less than 1 percent of Southern California's land area, around 30 percent of new households are projected to occur within these transit rich areas.

currently suspended due to the COVID-19 pandemic; and Metro Micro LAX/Inglewood Zone, which is a rideshare service provided by 10-passenger vans and are hailed using the Metro Micro App meant to replace some local bus service for short trips and provide easier connections to other bus and rail service and serves the entire Project study area.

The Project would not conflict with a program or plan addressing the circulation system, which include the City of El Segundo General Plan Circulation Element (September 2004), the ESMC, and the SCAG Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The City of El Segundo General Plan Circulation Element (September 2004) guides development to provide a safe, convenient, and efficient circulation system, while providing a means to respond to anticipated growth. SCAG adopted the 2020–2045 RTP/SCS in September 2020. The purpose of the RTP/SCS is to plan and balance the region's future mobility and housing needs with economic, environmental and public health goals.

As discussed above, the Project involves the construction of a new 5-story commercial office building, a new 23-space surface parking lot at 1950 East Grand Avenue, and a 4-level, 258-space parking structure at 1960 East Grand Avenue. The new office building would replace surface parking spaces in the northwestern portion of the Project Site and provide additional areas of employment in close proximity to public transit systems. The new surface parking lot would be located directly east of the existing parking structure also at the rear of the parcel, behind the new office building. The new parking structure would be constructed south of the existing office building on the other parcel at 1960 East Grand Avenue and would replace a landscaped, passive open space area. As no new curb cuts would be required for the Project, bicycle and pedestrian access to the Project site would not be affected, and existing bicycle access to the Project site would remain via Grand Avenue. The Project would provide a minimum of 56 bicycle spaces in compliance with the ESMC and CalGreen Code and a total of 1,103 vehicle parking spaces (existing and proposed), which exceeds code requirements by 226 additional spaces (877 parking spaces required for the two parcels combined). In addition, as detailed under Threshold 17b, the Project would develop and implement a transportation demand management (TDM) program as mitigation to reduce the trip generation and VMT impacts of the Project. The Project's TDM program would be implemented for the entire Project site, including the existing building's tenants and employees. The TDM program would discourage single-occupancy vehicle trips and encourage alternative modes of transportation. Specifically, the proposed TDM program would include, but not be limited to, strategies such as separate pricings for workplace parking; transit subsidies for employees; commuter program marketing and incentives; providing amenities for biking and walking; and rideshare incentives. Therefore, the Project would be consistent with the Circulation Element and the ESMC, and the Project would not conflict with applicable programs, plans, ordinances, or policies addressing the circulation system. Project impacts related to Threshold 17.a would be less than significant.

While not required for CEQA analysis a Level of Service (LOS) analysis is required to ensure compliance with General Plan Policy C3-1.2. The following provides the Project level of service (LOS) findings, which is included for informational purposes only. Compliance with General Plan Policy C3-1.2 prescribes that the minimum acceptable LOS at an intersection is LOS D, and that projects not consistent with the policy would: 1) forecast to result in an intersection LOS change from LOS D or better to LOS E or F; or forecast to result in the increase of intersection volume/capacity ratio (V/C) of 0.02 or greater at any intersection that is forecast to operate at LOS E or F. Project area traffic

conditions for existing and future conditions are based on pre-pandemic historic traffic counts, which reflect a conservative and higher traffic estimate than current conditions. Results of the analysis are presented in Table 17-1. As shown, under future (2024) conditions without the Project, of the six signalized intersections analyzed, two intersections, Pacific Coast Highway & Grand Avenue and Pacific Coast Highway & El Segundo Boulevard, operate at LOS F during the PM peak period and the latter Pacific Coast Highway & El Segundo Boulevard also operates at LOS E during the AM peak period. Under future plus Project conditions, the Project is anticipated to contribute a V/C greater than 0.02 at two intersections, Pacific Coast Highway & Grand Avenue and Continental Boulevard & Grand Avenue, during the AM peak periods. However, since both intersections operate at LOS D and better during those periods, the Project would comply with Genergl Plan Policy C3-1.2.

Table 17-1. Future and Future Plus Project Intersection Level of Service

No.	Intersection	Peak Period	Future (2024) V/C	Future (2024) LOS	Future + Project V/C	Future + Project LOS	V/C Increase
1	Pacific Coast Highway & Grand Avenue	AM	0.864	D	0.892	D	0.028
		PM	1.091	F	1.102	F	0.011
2	Continental Boulevard & Grand Avenue	AM	0.572	A	0.599	A	0.027
		PM	0.445	A	0.460	A	0.015
3	N Nash Street & Grand Avenue	AM	0.611	B	0.629	B	0.018
		PM	0.604	B	0.616	B	0.012
4	Pacific Coast Highway & El Segundo Boulevard	AM	0.977	E	0.986	E	0.009
		PM	1.096	F	1.101	F	0.005
5	Continental Boulevard & El Segundo Boulevard	AM	0.577	A	0.587	A	0.010
		PM	0.619	B	0.628	B	0.009
6	N Nash Street & El Segundo Boulevard	AM	0.669	B	0.677	B	0.008
		PM	0.752	C	0.762	C	0.010

Note: Project area existing traffic are based on pre-pandemic traffic conditions, which reflect a higher traffic load than current conditions.

The two Project driveways on Grand Avenue, which are considered unsignalized intersections, were assessed for average seconds per vehicle delay. Results of the analysis of the Project driveway LOS are presented in Table 17-2. As shown, with the addition of Project traffic, both driveways are projected to operate at acceptable levels.

Table 17-2. Project Driveway Level of Service

Driveway	Peak Period	Future + Project Delay (sec)	Future + Project LOS
West Driveway & Grand Avenue	AM	11.4	B
	PM	15.5	C
East Driveway & Grand Avenue	AM	13.1	B
	PM	34.2	D

17.b) Regulatory Background. On September 27, 2013, the Governor signed SB 743 (Chapter 386, Statutes of 2013) into law. SB 743, in part, amended Section 21099 of the Public Resources Code to direct the Governor's Office of Planning and Research (OPR) to prepare, develop, and transmit to the Secretary of the Natural Resources Agency for certification and adoption proposed revisions to the CEQA Guidelines establishing criteria for determining the significance of transportation impacts of projects both within

and outside transit priority areas.[36] Effective December 28, 2018, Section 15064.3 ("Determining the Significance of Transportation Impacts") was added to the CEQA Guidelines, and the State CEQA Guidelines, Section 15064.3 to establishing vehicles miles traveled (VMT) as the new most appropriate measure of transportation impacts metric.[37] VMT refers to the amount and distance of automobile travel attributable to a project. Subparagraph (b)(1) of section 15064.3 sets forth the criteria for analyzing the transportation impacts associated with land use projects. That section provides, in its entirety:

> (1) Land Use Projects. Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.

Analysis. The proposed Project is located within one-half mile of Metro C (Green) Line El Segundo and Mariposa Stations, existing major transit stops. Therefore, the Project may be presumed to cause a less than significant transportation impact pursuant to Section 15064.3(b)(1) of the CEQA Guidelines. Accordingly, the Project would not conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).

Although Section 15064.3, subdivision (b) allows the City to presume the project would cause less than significant transportation impacts due to its close proximity to existing major transit stops, the City nevertheless retained Fehr & Peers, a transportation consulting firm, to prepare a transportation impact analysis (TIA) for the Project. Based on the SCAG model, the existing regional daily work VMT per employee for office land uses is 18.6 per employee. Based on the TIA, the Project would generate an estimated 19.3 daily work VMT per employee.

Pursuant to CEQA Guideline Section 15064.3, subd. (b), "projects that decrease vehicle miles traveled in the Project area compared to existing conditions should be presumed to have a less than significant transportation impact." The estimated projected VMT of 19.3 would have to be reduced by 0.8 daily work VMT per employee, or approximately 4.1 percent in order to be below the existing VMT condition (18.6) in the Project area. In terms of commute trip reduction, this would be equivalent to 40 daily trips (4.1 percent of 976 daily trips estimated for the Project).

Based on the TIA, the Project would generate an estimated 19.3 daily work VMT per employee, which would be greater than the threshold of 18.6. As such, Project impacts related to VMT would be considered significant.

36 A "transit priority area" is defined as "an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." (Pub. Res. Code § 21099, subd. (a)(7). A "major transit stop" is defined as "a site containing an existing rail station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." (Pub. Res. Code § 21064.3.)

37 VMT refers to the amount and distance of automobile travel attributable to a project.

With the implementation of Mitigation Measure TRANS-1, the Project VMT will be reduced by approximately 4.1 percent and the Project's transportation impact will be less than significant under both the threshold set forth in Section 15064.3(b). In order to mitigate the work VMT per employee impacts to a less than significant level, the Project's daily work VMT per employee would need to be reduced by approximately 0.8. In terms of commute trip reduction, this would be equivalent to 40 daily trips (4.1 percent of 976 daily trips estimated for the Project).[38] Therefore, Mitigation Measure TRANS-1 provided below would be required to reduce the Project VMT under the regional average significance threshold. As provided in the Project Traffic Study (Appendix I), the Fehr & Peers TDM+ tool was used to quantify the potential VMT reduction for the Project due to implementation of the TDM measures identified in Mitigation TRANS-1. The effectiveness of the TDM strategies included in the TDM+ tool is based primarily on research documented in the 2010 California Air Pollution Control Officers Association (CAPCOA) publication, Quantifying Greenhouse Gas Mitigation Measures. CAPCOA offers methodologies based on preferred literature, along with methodologies based on alternative literature, for each strategy. The TDM+ tool considers a variety of TDM strategies and the setting in which they may apply, estimates effectiveness for each, and applies caps when appropriate (for example, simply aggregating the effectiveness of individual TDM measures can sometimes yield a result that is overestimated since more than one measure may be targeting the same trip). The reductions are presented as a range from "Low/CEQA" (i.e. highly defensible and suitable for use in environmental analysis documents or to mitigate a VMT impact) to "High/Ambitious" (the highest reduction for a given program, suitable for use for planning purposes). For the purposes of this analysis, the "Low/CEQA" reductions (i.e., the low end of the range) were considered for Mitigation Measure TRANS-1. With implementation of Mitigation Measure TRANS-1, the Project's impact would be less than significant.

Mitigation Measure TRANS-1: The applicant shall prepare and implement a Project-specific TDM program. The TDM program shall consist of a list of approved strategies, guided by the California Air Pollution Control Officers Association (CAPCOA) recommendations. The following strategies would be applicable to both existing and proposed uses unless specified otherwise:

- Workplace Parking Pricing—Separates parking from property costs, requiring office tenants who wish to lease parking spaces to do so at an additional cost from the office lease cost. Parking is priced separately from office leases and must include a mechanism for ensuring that the parking costs are passed through to the employees utilizing the parking spaces. This strategy would only be applicable to the newly proposed uses.

- Transit Subsidies—Providing employees with free transit passes.

- Promotions & Marketing—Involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. Marketing and public information campaign to

38 A commute trip reduction of 9% applied to the newly proposed uses' daily trips is 88 trips and a commute trip reduction of 4% applied to the existing building's daily trips (2,163 trips) is 87 trips, for a total commute trip reduction of 175 trips.

promote awareness of TDM program with an on-site coordinator to monitor the program.

- Emergency Ride Home—Providing a taxi or transportation network company (TNC) voucher for employees to travel home in an emergency.
- Bike Share—Implementing bike share to allow people to have on-demand access to a bicycle.
- Bicycle Amenities—Bicycle showers, repair stations, and secure bicycle parking.
- Pedestrian Network Improvements—Implementing pedestrian network improvements throughout and around the Project site that encourage people to walk to nearby destinations and transit stops
- Carpool/Vanpool Incentives—Providing monetary assistance with fares, gas costs, or parking costs for carpool or vanpool users.
- Ridematch Program—Assisting potential carpoolers in finding other individuals with similar travel routes in either closed or open systems.
- Carshare Program—Providing carshare programs to employees.

Timing/Implementation: *Applicant to provide a TDM Program to the City for review, with approval completed prior to Building Permit Final or issuance of the first certificate of occupancy. The success of the program will be monitored and the tenant commute patterns will be reviewed, with updates of adjustments and changes to be provided in an annual monitoring report, or the TDM shall include a mechanism to report to the City on the progress.*

Monitoring/Enforcement: *El Segundo Development Services Department*

17.c) The Project property is an existing developed site, and the proposed Project layout does not include sharp curves or other geometric designs that would increase hazards, as shown on Figure 4, Project Site Layout. As previously described, no new curb cuts would be required for the Project, and the two existing driveways on Grand Avenue would remain in place, providing vehicle access to the new and existing parking structures, surface parking, and loading spaces. Bicycle and pedestrian access to the Project site would not be affected, and existing bicycle access to the Project site would remain via Grand Avenue. Within the Project site, the Project would construct a pedestrian bridge connecting the third floor of the new office building to the existing parking structure. In addition, as shown on Figure 4, Project Site Layout, the Project would add a fire lane segment in order to connect the two existing fire lane segments. As such, the Project would not involve creating unsafe geometric design features such as sharp curves or dangerous intersections, and Project impacts would be less than significant and not mitigation would be required.

17.d) Emergency vehicle access to the Project site would continue to be provided via the two existing driveways to Grand Avenue. The west driveway provides right-in/right-out access to the Project site. The east driveway provides full in/out access to the Project

site. Under existing conditions, the Project Site includes two fire lane segments. As shown on Figure 3, Existing Site Development, one segment connects the western driveway to the existing parking structure; and the other segment runs south from the eastern driveway and wraps around the back of the building to connect to the existing parking structure. As discussed above, as shown on Figure 4, Project Site Layout, the Project would modify the design of the two fire lane segments to connect the fire lane segments. As such, vehicular circulation areas have been kept at the perimeter of the existing and proposed structures, and the fire lane has been integrated in the hardscape/landscape design for an uninterrupted pedestrian flow within the plaza areas. Therefore, the Project would not result in inadequate emergency access and impacts would be less than significant and no mitigation would be required.

18. TRIBAL CULTURAL RESOURCES

Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place or object with cultural value to a California Native American tribe, and that is:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	☐	☐	☒	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☒	☐	☐

Explanation of Checklist Responses

18.a) As mentioned previously, the potential for resources eligible for listing on the California Register of Historical Resources to exist on the Project site was evaluated in the Project Cultural Resources Identification Memorandum provided in Appendix D. The Project area was undeveloped until 1927, and the land was used for agricultural purposes from 1928 to 1952. No built features were depicted within the Project site until 1971, when a small rectangular building was depicted within the northwest corner of the Project site. However, by 1981, the small rectangular building was no longer extant. The City issued a building permit for the existing 12-story office building on February 20, 1986. Certificates of occupancy were issued for the 12-story building on March 31, 1987 and the parking structure on August 13, 1987. By 1994, the Project site was depicted with the current multi-story commercial office building, parking lot, and plaza. As evaluated in the Project Cultural Resources Identification Memorandum, the SCCIC records search, literature and historical map review, and historical society consultation identified no historical resources as defined by CEQA Section 15064.5(a) within the Project site. As such, the Project would not cause a substantial adverse change in the significance of a tribal cultural resource that is listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources. Impacts in this regard are less than significant impact and no mitigation is required.

18.b) Pursuant to AB52 (Chapter 532, Statures of 2014), the City of El Segundo sent project notification to five Native American Tribes, including Gabrielino/Tongva Nation, Gabrielino-Tongva Tribe, Gabrieleno Band of Mission Indians – Kizh Nation, Gabrieleno/Tongva San Gabriel Band of Mission Indians, and Gabrielino Tongva Indians of California Tribal Council on March 8, 2021. The Gabrieleño Band of Mission Indians—Kizh Nation (Kizh Nation), requested consultation on March 9, 2021 and the formal consultation occurred via phone on May 18, 2021, during which the Kizh Nation Chairman Andrew Salas provided evidence that the Project site is located within the boundaries of Kizh ancestral territory and that impacts to Kizh Nation tribal cultural resources would be significant unless mitigated by the Project.

As a result, the following Mitigation Measures TCR-1, TCR-2, and TCR-3 will be implemented such that in the event of any discovery of unknown tribal cultural resources during earthwork, impacts would be less than significant.

Mitigation Measure TCR-1: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities

A. The Project applicant shall retain a Native American Monitor from a tribe that demonstrates ancestral affiliation with the project area. For purposed of this mitigation measure, the Gabrieleño Band of Mission Indians – Kizh Nation has demonstrated such ancestral affiliation. The Monitor shall be retained prior to the commencement of any ground-disturbing activity for the subject Project at all Project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). Ground-disturbing activity shall include, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

B. A copy of the executed monitoring agreement shall be submitted to the lead agency either prior to the commencement of any ground-disturbing activity for the Project, or the issuance of any permit necessary to commence a ground-disturbing activity, whichever is earlier.

C. The Monitor may attend the Worker Environmental Awareness Program (WEAP) training required by CUL-1 to provide sensitivity/educational training. The developer will provide the Monitor with a minimum of five working days' notice of when the WEAP training is to take place.

D. The Monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground-disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the tribe. Monitor logs will identify and describe any discovered Tribal Cultural Resources ("TCRs") as defined in Public Resource Code Section 21074(A). Copies of monitor logs will be provided to the Project Applicant/Lead Agency upon written request to the Monitor.

E. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Monitor from a designated point of contact for the Project Applicant that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Monitor to the Project Applicant/Lead Agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact TCRs.

Mitigation Measure TCR-2: Discovery of Tribal Cultural Resources Other than Human Remains and/or Grave Goods

Upon the discovery of a TCR other than human remains and grave goods, Mitigation Measure CUL-2 shall be employed to ensure that any potential impacts remain less than significant.

Mitigation Measure TCR-3: Unanticipated Discovery of Human Remains and Associated Grave Goods

A. Human remains and grave/burial goods shall be treated alike per California Public Resources Code Section 5097.98(d)(1) and (2). If Native American human remains and/or grave goods discovered or recognized on the Project site, then all construction activities shall immediately cease in the area. Native American human remains are defined in Public Resources Code 5097.98 (d)(1) as "an inhumation or cremation, and in any state of decomposition or skeletal completeness." Associated grave goods must also be treated in accordance with Public Resources Code Section 5097.98.

B. Health and Safety Code Section 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and all ground-disturbing activities on the site or any nearby, adjacent area reasonably suspected to overlie the presence of human remains and/or associated grave goods shall be halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe they are Native American, he or she shall contact, within 24 hours, the Native American Heritage Commission (NAHC), and the protocols in Public Resources Code Section 5097.98 shall be followed.

C. The NAHC will identify the most likely descendent (MLD). The MLD has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods. If the MLD does not make recommendations within 48 hours, the owner shall reinter the remains in an area of the property secure from further disturbance.

D. If the landowner does not accept the MLD recommendations, the owner or the descendent may request mediation by the NAHC. If mediation fails, the landowner shall reinter the human remains with appropriate dignity on the property in a location not subject to future subsurface disturbance.

E. If no MLD is identified, no recommendations are made, or the recommendation is rejected after mediation, the developer shall reinter the remains with appropriate dignity on the property in a location not subject to further, or anticipated future, subsurface disturbances. (Pub. Res. Code Section 5097.98[e]; CEQA Guidelines Section 15064.5(e).)

F. Construction activities may resume in other parts of the Project site at a minimum of 100 feet away from discovered human remains and/or grave goods, unless the archaeologist and tribal monitor determines that resuming construction activities would likely disturb other human skeletal material, human remains, or grave goods. The tribal monitor and archaeologist shall provide the project manager express notice if the construction activities must be halted at a distance other than 100 feet, along with any other measures the archaeologist deems necessary. (14 Cal. Code Regs. Section 15064.5[f].)

G. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or grave goods.

H. Any discovery of human remains/grave goods shall be kept confidential to prevent further disturbance.

Timing/Implementation: *Applicant to submit evidence of a contracted Native American Monitor to the City prior to issuance of building permits*

Monitoring/Enforcement: *El Segundo Development Services Department*

19. UTILITIES AND SERVICE SYSTEMS

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	☒	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	☒	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	☒	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

Explanation of Checklist Responses

19.a) The Project would involve minor alteration of an existing parking structure and an office building (non-structural alterations to accommodate a pedestrian bridge from the existing parking structure to the new office building), as well as the construction of a 5-level office building and a 4-level parking structure. The result of the rehabilitation activities would be a net increase in 105,469 gross square feet of office space due to the construction of the new office building. Given the increase in intensity of office uses at the Project site, the Project would result in an increase in water demand, wastewater generation, and an increase in demand on other utilities, such as electricity, natural gas, and telecommunications. The Project site contains an existing commercial office building that is currently served by these utilities.

Water

Water service is provided to the Project site by the City of El Segundo's Water Division, which is a partner of the West Basin MWD. The water district provides wholesale potable water to 17 cities, serving approximately 900,000 people. The Project is a development that builds out under the existing zoning and General Plan land use designation, which considers the sufficiency of water supply for the long-term development in the City. The Project would connect into existing onsite potable water infrastructure within the Project site. The City's Public Works Department has found the existing water service infrastructure serving the Project site is sufficient to meet the Project's estimated net increase in water demand of 15,363 gallons per day (gpd) and of sustaining a minimum

pressure of 50 pounds per square inch (psi). Therefore, while the Project would result in an increase in water consumption given the increase in commercial square footage on the Project site, the Project would not require the construction or relocation of new or expanded water facilities and impacts would be less than significant and no mitigation measures are required.

Wastewater

Wastewater generated by the Project would be conveyed to the Sanitation Districts of Los Angeles County (the Sanitation Districts) Joint Water Pollution Control Plant, located at 24501 South Figueroa Street in Carson. The facility currently serves over 4.8 million residents, businesses, and industries by providing both primary and secondary wastewater treatment on an average flow of 261.1 million gallons per day (mgd), with a maximum capacity of up to 400 (mgd). Before discharge, the treated wastewater is disinfected with hypochlorite and sent to the Pacific Ocean through a network of outfalls. These outfalls extend 2 miles off the Palos Verdes Peninsula to a depth of 200 feet. The Joint Water Pollution Control Plant must comply with its current National Pollutant Discharge Elimination System (NPDES) Permit, which regulates the plant's discharges. The City of El Segundo Public Works Department has reviewed the Project and confirmed adequate capacity to serve the Project, based on an estimated generation of 19,669 average gpd. The Project may connect the sewer line from the proposed office building to the existing 12-inch on-site lateral that is already connected to the public main. If this is not possible, a new connection would need to be made to the public sewer line. As such, the Project would not require any change in the treatment protocol for Project-generated wastewater. Project impacts would be less than significant.

Stormwater Drainage

As discussed in Section 10, Hydrology and Water Quality, of this Initial Study, the existing storm drainage facilities, coupled with proposed improvements, including better balancing storm drain flows between the property addresses and on-site stormwater storage/infiltration basins would be adequate to accommodate Project runoff. No physical modifications to the existing municipal stormwater infrastructure in the Project vicinity would be required to handle the Project stormwater runoff. Further, short-term stormwater impacts, such as those resulting from construction activities and resulting sediment runoff from the Project site, would be regulated by the NPDES Construction General Permit. As also discussed in Section 10, this permit requires identification of a variety of water quality control BMPs to be specified on construction plans and implemented throughout construction. Through compliance with existing, mandatory regulations regarding stormwater storage and treatment, potential water quality impacts during construction and operation would be avoided or reduced to less than significant levels and would avoid conflicts with water quality standards established by the Los Angeles Regional Water Quality Control Board. Thus, the Project would not require the construction or relocation of new or expanded stormwater facilities and impacts would be less than significant.

Dry Utilities (Natural Gas, Electricity, Telecommunication)

Southern California Edison (SCE) and Southern California Gas Company (SoCalGas) provide electricity and natural gas services to the Project site, respectively. These electricity and natural gas providers service the existing office building and parking

structure on the Project site. As such, Project-related improvements would include connection of existing natural gas and electricity service lines to the proposed office building and parking structure, as well as outdoor lighting in the courtyard, common areas, and along pathways.

Regarding natural gas, SoCalGas issued a Will Serve letter (Appendix I), confirming the presence of facilities in the area. There are no major upgrades to the delivery system that are anticipated as a result of this Project because overall regional projections set forth by energy purveyors anticipate that energy demand will decline. As stated in the 2020 California Gas Report, prepared by the California Gas and Electric Utilities, natural gas usage by commercial uses in California is expected to decline at a rate of 1.7 percent per year from 2019 to 2035.[39] This is because of more efficient power plants, statewide efforts to minimize greenhouse gas emissions through demand-side reductions, more efficient building standards incorporated into the California Title 24 building code, and CPUC-authorized energy efficiency programs. Given such decline in natural gas demand, it is not anticipated that the proposed Project would require any major reconstruction or relocation of off-site natural gas infrastructure. Should SoCal Gas determine that upgrades to existing natural gas infrastructure would be necessary, resulting from either the demand of the proposed project or cumulative demand increases, such off-site upgrade projects would be undertaken by SoCal Gas and would be subject to environmental review pursuant to CEQA.

Regarding electricity, SCE issued a Will Serve letter (Appendix I), confirming that SCE will serve the Project's electrical requirements. The California Energy Commission (CEC) provides new forecasts for electricity demand every two years as part of the *Integrated Energy Policy Report* process. The most recent report was adopted in 2019 and states that energy demand is anticipated to increase over the next 10 years with the increase depending on economic and demographic growth, the rates of electrical rates, and how broadly energy efficiency programs are adopted. However, the CEC and individual electricity purveyors, such as SCE, review demand projections published in this report and plan for capacity improvements in their distribution systems, as necessary. Should SCE determine that upgrades to existing electrical energy infrastructure would be necessary, resulting from either the demand of the proposed Project or cumulative demand increases, such off-site upgrade projects would be undertaken by SCE and would be subject to environmental review pursuant to CEQA. Attempting to estimate what environmental impacts may result from such electrical utility infrastructure improvements without knowledge of when and where the improvements would take place would be speculative.

Telecommunication services are provided to the existing office building on the Project site by private companies. Upgrades to the existing telecommunication infrastructure on the Project site would involve connecting the proposed office building to existing telecommunications connections within the Project site and in adjacent streets (Grand Avenue). Upgrades to existing telecommunication facilities and construction of new facilities to meet the demand of users are determined by telecommunication providers and is subject to its own environmental review. Any traffic disruptions associated with telecommunication utility activities within the travel lanes would be addressed through routine traffic control measures.

39 California Gas and Electric Utilities. 2020. *2020 California Gas Report.*

In summary, the Project would not result in the relocation or construction of new or expanded water, wastewater treatment, or stormwater drainage, electric power, natural gas, or telecommunications facilities and impacts would be less than significant.

19.b) As mentioned, water service is provided to the Project site by the City of El Segundo's Water Division, which is a partner of the West Basin MWD. The water district provides wholesale potable water to 17 cities, serving approximately 900,000 people. According to the West Basin MWD's 2020 Urban Water Management Plan (UWMP), the 2020 water supply consists of: 15 percent groundwater; 75 percent imported water; 11 percent recycled water; and less than 1 percent desalinated water.[40] In compliance with legislative requirements, the UWMP details how West Basin MWD manages its water supplies and demands under all hydrology conditions. The UWMP also demonstrates how West Basin MWD proposes to meet its service area's retail demands over 25 years and provide long-term water reliability. According to the UWMP (Table 3-1), while the population within the West Basin MWD is anticipated to increase between 2020 and 2040, the overall baseline potable water demand in acre-feet per year is expected to decrease over this time period due to water efficiency measures implemented within the service area, as well as implementation of recycled water programs. The UWMP concluded that West Basin MWD does not anticipate any shortages and will be able to provide reliable water supplies under both single dry year and multiple dry year conditions. No new water supply, storage, or distribution facilities are identified in the UWMP to address water demands in El Segundo. Under Water Code Section 10912, the Project is not subject to a water supply assessment since the Project does not meet the commercial office building criteria to: add more than 1,000 persons; or add more than 250,000 square feet of floor space. The City's Public Works Department has reviewed the project in comparison to the existing water service infrastructure serving the Project site. The Public Works Department is satisfied that the existing infrastructure is sufficient to meet the Project's estimated net increase in water demand of 15,363 gallons per day (gpd) and of sustaining a minimum pressure of 50 pounds per square inch (psi). Therefore, while the Project would result in an increase in water consumption given the increase in commercial square footage on the Project site, the Project would not require the construction or relocation of new or expanded water facilities and impacts would be less than significant and no mitigation measures are required.

As discussed above, the West Basin MWD's 2015 UWMP concluded the City would be able to rely on the groundwater, imported water recycled water, water conservation savings and desalinated water supplies within the District. Specifically, the West Basin MWD states in the UWMP that it does not anticipate any shortages and will be able to provide reliable water supplies under both single dry year and multiple dry year conditions through 2040. Accordingly, there would be sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years. Therefore, impacts to water supplies would be less than significant and no mitigation would be required.

19.c) As discussed above, the Sanitation Districts confirmed adequate capacity to serve the Project, based on an estimated increase in generation of 118 gpm. Additionally, as part of the entitlement review, the El Segundo Public Works Department has calculated the average daily flow at 19,669 gpd and indicated no concerns with the Project impacting

40 West Basin Municipal Water District. 2021. *2020 Urban Water Management Plan.*

the overall sewer system from the property. Therefore, impacts to wastewater treatment would be less than significant and no mitigation would be required.

19.d,e) Once operational, solid waste generated by the Project would consist of typical waste from a commercial office building. Project-generated wastes would continue to be accepted by the same multiple refuse disposal facilities that currently receive El Segundo's municipal solid wastes. In 2019, El Segundo disposed of approximately 46,016 tons of solid waste, as reported to the California Department of Resources Recycling and Recovery (CalRecycle 2020). Approximately 30 percent was taken to the El Sobrante Landfill, which has a cease operations date of January 1, 2051. Approximately 17 percent of this waste was taken to the Simi Valley Landfill & Recycling Center, which has a cease operations date of March 31, 2063. The proposed Project would result in a minor increase in solid waste as a result of the net increase in commercial office space. Specifically, with a net increase in 93,559 net square feet, the Project would result in an increase of approximately 561 lbs per day.[41] Furthermore, as applicable, the Project would comply with Senate Bill 1018 (Chapter 39, Statutes of 2012), Mandatory Commercial Recycling, which requires a business that generates 4 cubic yards or more of commercial solid waste per week to arrange for recycling services. Because landfill capacity is closely monitored by the Los Angeles County Sanitation District, the landfills that serve the City of El Segundo would have sufficient remaining capacities to absorb the solid waste increase resulting from the Project.

It should also be noted that the City has completed a comprehensive Source Reduction and Recycling Element in compliance with Assembly Bill (AB) 939, which requires every city in California to reduce the waste it sends to landfills. As of 2006, El Segundo was recycling 84 percent of its solid waste, thereby complying with the standards established by AB 939, which required cities to reduce waste disposal at landfills by 50 percent by the year 2000.

In addition, the City and/or the Project would be required to comply with federal, State, and local management and reduction statutes and regulations related to solid waste to ensure that the solid waste stream diverted to landfills and recycling facilities is reduced in accordance with existing regulations. For example, CalGreen requires that at least 50 percent of all nonhazardous construction wastes be recycled and/or salvaged, rather than transported to a landfill for disposal.

Finally, the Project would be required to comply with adopted programs and regulations pertaining to solid waste. Thus, participation in the City's recycling programs during construction and operation would ensure that the Project would not conflict with federal, state, and local statutes and regulations related to solid waste. Accordingly, the Project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals. Therefore, impacts related to solid waste generation would be less than significant and no mitigation would be required.

41 California Department of Resources Recycling and Recovery, 2020. *Estimated Solid Waste Generation Rates.*

20. WILDFIRE

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☐	☒
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☐	☒
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☐	☒

Explanation of Checklist Responses

20.a) The Project site is not located within or adjacent to a Very High Fire Hazard Severity Zone (VHFHSZ), as designated by the California Department of Forestry and Fire Protection.[42] The nearest VHFHSZs to the Project site are isolated areas located north of the Project site (the Ballona Wetlands Ecological Reserve and the Inglewood Oil Field (located 3.6 miles and 5 miles north of the Project site, respectively). The closest large fire hazard area is the Palos Verdes Peninsula, located 8 miles south of the Project site. The Project property is situated in a fully urbanized area with an urban street network, fully pressurized water system, and managed landscaping limited to decorative trees and shrubs. As such, wildland fires would not occur on or near the Project site. Regardless, in the event of any disaster warranting evacuation, the emergency routes used would depend on a number of variables, including the type, scope, and location of the incident. It is the responsibility of emergency service and/or appropriate public officials to adequately assess the situation so that safe and efficient evacuation routes are selected. As the Project site is in a fully urbanized area with a major arterial street (i.e., Pacific Coast Highway) and a major highway (I-105) within close proximity, the proposed Project would not substantially impair an adopted emergency response plan or emergency evacuation plan, and no impact would occur.

20.b) As the Project site is not within or near a VHFHSZ, the proposed Project would not have the potential to expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire due to slope, prevailing winds, and other factors, or exacerbate wildfire risks. As such, the Project would result in no impact that would exacerbate wildfire risks and expose occupants to pollutants released from a wildfire.

42 California Office of the State Fire Marshall, 2020. *Fire Hazard Severity Zone Viewer*: https://egis.fire.ca.gov/FHSZ/

20.c) The proposed Project would not require the installation or maintenance of associated infrastructure in or near a state responsibility area or VHFHSZ that may exacerbate fire risk or result in temporary or ongoing impacts to the environment. As such, no impact would occur.

20.d) The Project site is within a relatively flat, urbanized area that is adjacent to existing commercial and industrial structures. The Project would not expose people or structures to significant risks in or near a state responsibility area or VHFHSZ, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. As such, no impact would occur.

21. MANDATORY FINDINGS OF SIGNIFICANCE

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☐	☐	☒	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

Explanation of Checklist Responses

21.a) As discussed in checklist responses 3.a–d and 13.a–c, the proposed Project would generate less than significant emissions of criteria air pollutants and less than significant noise levels during the demolition, renovation, and construction phases and over the operating life of the office campus. With adherence to regulatory requirements, air quality and noise impacts would not be significant and would not result in a degradation of the quality of the urbanized environment in which the Project is proposed. The existing Project site has been fully developed, and there are no sensitive biological resources on or near the Project site, and as discussed in checklist responses 4.a–f, the Project would have no impact on fish or wildlife populations, nor would it eliminate any habitat or biological resources that could reduce the number or range of rare or endangered species. In addition, as discussed in checklist responses 5.a–c, no local, state, or federally designated examples of major periods in California history or prehistory have been identified on the site or in the vicinity. The Project would have a less than significant impact and the Project would not result in a mandatory finding of significance in this regard.

21.b) A significant cumulative impact may occur if a project, in conjunction with related projects, would result in impacts that are less than significant when viewed individually but would be cumulatively significant when viewed together. In addition to this Project, there are currently 17 other development projects (refer to Appendix K, Cumulative Projects List) in various areas of El Segundo that have been proposed and approved but have not been completed. These consist of nine projects currently in construction and eight with either pending entitlements or pending construction permit issuance. These other projects include a range of land uses types and intensities. Specifically, the

projects include other office buildings, a total of at least 278 residential units, a recreational hitting bay and restaurant and event use structure, 8 dedicated office building and office expansion uses, 6 mixed commercial/research and development/warehouse/retail uses, a computer data center. The nearest project is a proposed 300,00 square foot research and development and office use with a parking structure, located at 1955 East Grand Avenue, directly north of the proposed Project. This nearby project is under entitlement review with build-out projected by 2024, which may coincide with the Project construction activities. However, when considering the proposed Project in combination with the past, present, and reasonably foreseeable future projects in the vicinity of the Project site, the proposed Project does not result in environmental impacts that would incrementally contribute to a significant cumulatively impact. As detailed in the preceding checklist responses, the proposed Project would not result in any significant and unmitigable impacts in any environmental categories. The Project would be consistent with regional plans and programs that address environmental factors that include air quality, energy, greenhouse gases, hydrology and water quality, transportation, utilities, and other applicable regulators that have been adopted by public agencies. Additionally, in many cases, including aesthetics, agriculture, biological resources, cultural resources, geology, hazards, hydrology, land use, population and housing, public services, mineral resources, noise, recreation, tribal cultural resources, and wildfire, the impacts associated with the Project are either localized to the Project site or are of such a negligible degree that the impacts would not result in a considerable contribution to any significant cumulative impacts. In the case of population and housing, a conservative assumption that 5 percent or 32 of the new employees may relocate to the Project area was analyzed, which concluded that adequate housing is available in the Project area. Further, when considered with the cumulative project scenario, which includes the addition of 278 residential units, the additional new housing from current and future projects would further ameliorate any effects in Project housing. As such, cumulative impacts would be less than significant (not cumulatively considerable) and the Project would not result in a mandatory finding of significance in this regard.

21.c) As discussed in checklist responses 3.a–d and 13.a–c, the proposed Project would generate less than significant emissions of criteria air pollutants and TACs, and less than significant noise levels during the demolition, renovation, and construction phases and over the operating life of the office campus. With adherence to regulatory requirements for air quality and noise, these impacts would not cause substantial adverse effects on humans. As discussed in checklist responses 9.a–b, based on the environmental site assessment conducted on the Project site, development of the proposed office building and parking structure uses would not result in significant hazards associated with the storage, use, transport, or disposal of hazardous materials or wastes. As a result, the Project would have a less than significant impact and the Project would not result in a mandatory finding of significance in this regard.

ARTISAN REALTY ADVISORS

This conceptual design is based upon a preliminary review of entitlement requirements and on unverified and possibly incomplete site and/or building information, and is intended merely to assist in exploring how the project might be developed. 	EXISTING TREE TO REMAIN	--

PLANTING NOTES:

ALL LANDSCAPING SHALL BE LOW PROFILE AROUND PERIMETER FENCING, WINDOWS, DOORS AND ENTRYWAYS, TAKING SPECIAL CARE NOT TO LIMIT VISIBILITY OR PROVIDE CLIMBING ACCESS. FLORAL OR GRASS GROUND COVER IS RECOMMENDED. BUSHES SHALL BE TRIMMED TO 2 TO 3 FEET AND AWAY FROM BUILDINGS. DENSE BUSHES SHALL NOT BE CLUMPED TOGETHER; THIS PROVIDES A HIDING PLACE FOR CRIMINAL ACTIVITY. TREES SHALL BE TRIMMED UP TO 7 FEET.

TREES/BUSHES/SHRUBS SHALL NOT BE PLANTED NEXT TO OR NEAR ANY LIGHT FIXTURE OR LIGHT STANDARD. WHEN GROWN TO MATURITY THIS LANDSCAPING WILL BLOCK THE LIGHT AND REDUCE LIGHTING ON THE GROUND SURFACE.

ZONING SUMMARY

ZONE: CO (CORPORATE OFFICE)
USE: OFFICE

LOT AREA: A MINIMUM OF 10,000 SF
LOT FRONTAGE EACH LOT SHALL HAVE A MINIMUM FRONTAGE ON A STREET OF 100'
BUILDING HEIGHT: EAST OF PACIFIC COAST HIGHWAY: NO BUILDING OR STRUCTURE SHALL EXCEED 200'
FAR: 0.80

SETBACK REQUIREMENTS
FRONT: 20'
SIDE PARCEL: 10'
REAR: 10'

Per Section 15-5D-7 SITE DEVELOPMENT STANDARDS:
F. Building Area: The total net floor area of all buildings shall not exceed the total net square footage of the property multiplied by 0.8 or an FAR of 0.8:1

PARCEL 1 (1950 E GRAND AVE):
LOT AREA: 519'-5" x 225'-2" = 116,961 SF (2.685 ACRES)
LOT FRONTAGE: (225'-2")
BUILDING HEIGHT:
1950 BLDG: 96'-5"
PARKING STRUCTURE: 110'-0"
ALLOWABLE SITE FAR: 93,569 (NET) SF
PROPOSED SITE FAR: 93,559 (NET) SF
SITE FAR: 0.80

PARCEL 2 (1960 E GRAND AVE):
LOT AREA: 519'-5" x 225'4" = 116,961 SF (2.685 ACRES)
LOT FRONTAGE: (225'-4")
BUILDING HEIGHT:
1960 BLDG: 162'-0"
PARKING STRUCTURE: 58'-3"
SITE FAR: 233,799 (NET) SF (PER ENVIRONMENTAL ASSESSMENT NO EA-012 & PER THE BUILDING PERMIT)
SITE FAR: 1.99 (LEGAL NON-CONFORMING)

PROJECT DATA

SITE DATA

PARCEL 1 ASSESSOR'S PARCEL NO: 4138-007-065
PARCEL 2 ASSESSOR'S PARCEL NO: 4138-007-066

SITE PARKING REQUIRED (OFFICE USE):
1/300 FOR FIRST 25,000 SF
1/350 FOR SECOND 25,000 SF
1/400 FOR AREA IN EXCESS OF 50,000 SF

GROSS BUILDING AREA:

1950 (NEW BUILDING)	1960 (EXISTING BUILDING)
GROUND FLOOR: 29,654 SF	TOTAL: 233,799 SF (PER ENVIRONMENTAL
SECOND FLOOR: 27,004 SF	ASSESSMENT NO EA-012 & PER THE BUILDING
THIRD FLOOR: 20,737 SF	PERMIT)
FOURTH FLOOR: 20,951 SF	
MEZZANINE FLOOR: 7,123 SF	
TOTAL: 105,469 SF	

Per Section 15-1-6 "FLOOR AREA (GROSS): The area included within the surrounding exterior walls of a building or portion thereof, exclusive of garages, vent shafts and courts. The floor area of a building, or portion thereof, not provided with surrounding exterior walls shall be the usable area under the horizontal projection of the roof or floor above."

NET FLOOR AREA:

1950 (NEW BUILDING)

GROUND FLOOR: 25,328 SF
SECOND FLOOR: 24,643 SF
THIRD FLOOR: 18,764 SF
FOURTH FLOOR: 18,858 SF
MEZZANINE FLOOR: 5,964 SF
TOTAL: 93,559 SF

Per Section 15-1-6 "FLOOR AREA (NET): The total horizontal area of all floors, stories or levels, as measured to the interior of a building's perimeter walls. Space devoted to the following shall not be included when determining the total net floor area within a building or structure:
A. Elevator shafts
B. Stairwells and stairway enclosures.
C. Courts or atriums.
D. Rooms exclusively holding building operating equipment.
E. Parking spaces at or above grade and access thereto; provided, that in commercial and manufacturing zones:
F. Structures devoted exclusively to parking.
G. Restrooms in common areas of nonresidential buildings"

SITE DATA

PARKING SUMMARY: REQUIRED

PARCEL 1 (1950 E GRAND AVE):
REQUIRED PARKING
25,000 SF/300=83
25,000 SF/350=71
43,559 SF/400=109
TOTAL: 263 STALLS

PARCEL 1 (1950 E GRAND AVE):
LOADING SPACES REQUIRED
2 SMALL TRUCK SPACES FOR BUILDINGS 25,001 TO 100,000 SF IN SIZE

PARCEL 1 (1950 E GRAND AVE):
REQUIRED BICYCLE SPACES:
15,000 SF = 4
43,559-15,000/400=71
83+71+71=225 X 5%= 11
TOTAL= 15 SPACES

PARCEL 2 (1960 E GRAND AVE):
REQUIRED PARKING
25,000 SF/300-83
25,000 SF/350=71
183,799 SF/400=460
TOTAL: 614 STALLS

PARCEL 2 (1960 E GRAND AVE):
LOADING SPACES REQUIRED
2 SMALL TRUCK AND 1 LARGE TRUCK SPACE FOR BUILDINGS 100,001 TO 250,000 SF IN SIZE
PROVIDED: 2 SMALL AND 1 LARGE TRUCK SPACE

PARCEL 2 (1960 E GRAND AVE):
REQUIRED BICYCLE SPACES:
15,000 SF = 4
183,799-15,000/400=422
83+71+422=576 X 5%= 29
TOTAL= 25 SPACES

BICYCLE REQUIREMENT:
4 SPACES UP TO 15,000 SF + A MINUMIM OF 5% OF THE REQUIRED VECHICLE SPACES FOR THE PORTION ABOVE 15,000. MAX 25 SPACES

PARKING SUMMARY: EXISTED

PARCEL 1 (1950 E GRAND AVE):
EXISTING PARKING:
PARKING STRUCTURE: 819
SURFACE PARKING: 87
TOTAL: 906 STALLS

PARCEL 1 (1950 E GRAND AVE):
SURFACE PARKING TO BE REMOVED: 87 STALLS

PARCEL 2 (1960 E GRAND AVE):
EXISTING PARKING:
SURFACE PARKING: 11
TOTAL: 11 STALLS

PARCEL 2 (1960 E GRAND AVE):
SURFACE PARKING TO BE REMOVED: 8 STALLS

PARKING SUMMARY: PROPOSED

PARCEL 1 (1950 E GRAND AVE):
PROPOSED PARKING:
(E) PARKING STRUCTURE: 819
(N) SURFACE PARKING: 23
TOTAL: 842 STALLS

PARCEL 1 (1950 E GRAND AVE):
PROVIDED BICYCLE SPACES:
(7.5) NEW BICYCLE RACKS
FOR 15 SPACES TOTAL

PARCEL 1 (1950 E GRAND AVE):
PROVIDED LOADING SPACES:
2 SMALL TRUCK SPACES

PARCEL 2 (1960 E GRAND AVE):
PROPOSED PARKING:
(N) PARKING STRUCTURE: 258
(E) SURFACE PARKING: 3
TOTAL: 261 STALLS

PARCEL 2 (1960 E GRAND AVE):
PROVIDED BICYCLE SPACES:
(2) EXISTING BICYCLE RACKS
INSIDE EXISTING PARKING STRUCTURE FOR 12 SPACES TOTAL
(6.5) NEW BICYCLE RACKS FOR 13 TOTAL
TOTAL PROVIDED: 25 SPACES

PARCEL 2 (1960 E GRAND AVE):
PROVIDED LOADING SPACES:
2 SMALL AND 1 LARGE TRUCK SPACE

The number of on site parking spaces required for the establishment of a building or use must be provided and thereafter maintained at the ratios set forth below. For uses not listed the required number of spaces will be determined by the director of planning and building safety based on most similar listed use or a parking demand study. A parking demand study must include, without limitation, information specifying the number of employees, customers, visitors, clients, shifts, deliveries, parking spaces, or other criteria established by the director of planning and building safety. The director of planning and building safety may at the director's discretion, refer any decision regarding uses not listed to the planning commission for review. **Unless stated otherwise, parking must be based on net floor area as defined in this code.** Accessible parking spaces must be provided and comply with the Americans With Disabilities Act (ADA), title III and California Code of Regulations (CCR), California Access Code, title 24. (Ord. 1444, 8-3-2010)

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF EL SEGUNDO, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL ONE:

PARCEL 1 IN THE CITY OF EL SEGUNDO, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN ON PARCEL MAP NO. 14316, AS PER MAP FILED IN BOOK 159, PAGE 49 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPTING THEREFROM OIL, GAS AND OTHER HYDROCARBON SUBSTANCES, WATER (AND STEAM) AND OTHER MINERALS, WHETHER SIMILAR TO THOSE SPECIFIED OR NOT, WITHIN OR THAT MAY BE PRODUCED FROM SAID LAND, WITH NO RIGHT OR INTEREST OF ANY KIND THEREIN, EXPRESS OR IMPLIED IN THE SURFACE OF SAID LAND, BUT WITH THE SOLE AND EXCLUSIVE RIGHT FROM TIME TO TIME TO DRILL AND MAINTAIN WELLS AND SUPPORTING WORKS INTO OR THROUGH SAID LAND BELOW A DEPTH OF 500 FEET AND TO PRODUCE, INJECT, STORE AND REMOVE FROM AND THROUGH SUCH WELLS OR WORKS, OIL, GAS AND OTHER SUBSTANCES OF WHATSOEVER NATURE INCLUDING THE RIGHT TO PERFORM ANY AND ALL OPERATIONS DEEMED NECESSARY OR CONVENIENT FOR THE EXERCISE OF SAID RIGHT, AS RESERVED BY STANDARD OIL COMPANY OF CALIFORNIA, A CORPORATION, IN DEED RECORDED JUNE 30, 1969 AS INSTRUMENT NO. 759 IN BOOK D–4419, PAGE 266 OFFICIAL RECORDS.

PARCEL TWO:

PARCEL 2, IN THE CITY OF EL SEGUNDO, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN ON PARCEL MAP NO. 14316, AS PER MAP FILED IN BOOK 159, PAGE 49 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPTING THEREFROM OIL, GAS AND OTHER HYDROCARBON SUBSTANCES, WATER (AND STEAM) AND OTHER MINERALS, WHETHER SIMILAR TO THOSE SPECIFIED OR NOT, WITHIN OR THAT MAY BE PRODUCED FROM SAID LAND, WITH NO RIGHT OR INTEREST OF ANY KIND THEREIN, EXPRESS OR IMPLIED IN THE SURFACE OF SAID LAND, BUT WITH THE SOLE AND EXCLUSIVE RIGHT FROM TIME TO TIME TO DRILL AND MAINTAIN WELLS AND SUPPORTING WORKS INTO OR THROUGH SAID LAND BELOW A DEPTH OF 500 FEET AND TO PRODUCE, INJECT, STORE AND REMOVE FROM AND THROUGH SUCH WELLS OR WORKS, OIL, GAS AND OTHER SUBSTANCES OF WHATSOEVER NATURE INCLUDING THE RIGHT TO PERFORM ANY AND ALL OPERATIONS DEEMED NECESSARY OR CONVENIENT FOR THE EXERCISE OF SAID RIGHT, AS RESERVED BY STANDARD OIL COMPANY OF CALIFORNIA, A CORPORATION, IN DEED RECORDED JUNE 30, 1969 AS INSTRUMENT NO. 759 IN BOOK D–4419, PAGE 266 OFFICIAL RECORDS.

SCHEDULE B ITEM

BASED UPON PRO FORMA-CA-FEDP-IMP-27306-1-19-20036732, DATED JANUARY 15, 2020 AS PREPARED BY FIDELITY NATIONAL TITLE INSURANCE COMPANY.

A.– TAXES (NOT A SURVEY MATTER).

A–1.– TAXES (NOT A SURVEY MATTER).

B.– TAXES (NOT A SURVEY MATTER).

C.– TAXES (NOT A SURVEY MATTER).

1.– WATER RIGHTS, CLAIMS OR TITLE TO WATER, WHETHER OR NOT DISCLOSED BY THE PUBLIC RECORDS (NOT A SURVEY MATTER).

(2) EASEMENT FOR UNDERGROUND ELECTRICAL SUPPLY SYSTEMS AND COMMUNICATION SYSTEMS RECORDED NOVEMBER 20, 1986 RECORDING NO. 86–1610330 OFFICIAL RECORDS (PLOTTED HEREON).

(3) EASEMENT FOR LAY, CONSTRUCT, RECONSTRUCT, REPLACE, OPERATE, CHANGE THE SIZE OF, INCREASE THE NUMBER OF ANY REMOVE UNDERGROUND PIPE LINES AND APPURTENANCES THEREOF FOR THE TRANSPORTATION OF OIL, PETROLEUM, GAS, GASOLINE, WATER OR OTHER SUBSTANCES, AND TO CONSTRUCT, MAINTAIN, OPERATE, REPAIR, RENEW, ADD TO AND REMOVE UNDERGROUND WIRES, CONDUCTORS, CABLES, CONDUITS AND SIMILAR FACILITIES AND APPURTENANCES AND INCIDENTAL PURPOSES RECORDED JUNE 30, 1969 RECORDING 759 IN BOOK D–4419, PAGE 233 OFFICIAL RECORDS (PLOTTED HEREON).

4.– EASEMENT FOR DRAINAGE OF WATER RUN OFF RECORDED MAY 26, 1978 RECORDING 78–566101 OFFICIAL RECORDS (THE EXACT LOCATION AND EXTENT OF SAID EASEMENT IS NOT DISCLOSED OF RECORD).

(5) EASEMENT FOR UNDERGROUND ELECTRICAL SUPPLY SYSTEMS AND COMMUNICATION SYSTEMS RECORDED JANUARY 30, 1987 RECORDING 87–145573 OFFICIAL RECORDS (PLOTTED HEREON).

(6) EASEMENT FOR PUBLIC STREET RECORDED MAY 26, 1987 RECORDING 87–824499 OFFICIAL RECORDS (PLOTTED HEREON).

7.– INTENTIONALLY DELETED

8.– INTENTIONALLY DELETED

LANDSCAPE REQUIREMENTS

TOTAL LANDSCAPE (OPEN) AREA	
1950 PARCEL:	63,166 SF
1960 PARCEL:	73,351 SF
TOTAL:	136,517 SF

BUILDING PERIMETER
REQUIREMENTS: A MINIMUM HORIZONTAL DEPTH OF (5') OF LANDSCAPE SHALL BE PROVIDED AROUND THE BUILDING
PROVIDED: LANDSCAPE MATERIALS ARE PROVIDED A MINIMUM OF (5') AROUND THE PERIMETER OF THE BUILDING. (REFER TO THIS SHEET FOR LANDSCAPE AREA)

PROPERTY PERIMETER		
REQUIREMENTS: PROVIDE (1) TREE FOR EVERY (25') OF STREET FRONTAGE		
STREET FRONTAGE:	451 LF =	19 TREES REQ'D
TREES PROVIDED:	19 (# P1-P19)	

VEHICULAR USE AREA (VUA)	
REQUIREMENTS: PROVIDE (1) TREE FOR EVERY (3,000) SQUARE FEET AND LANDSCAPE AREAS TO COVER FIVE PERCENT (5%) OF THE VUA	
VUA (BOTH PARCELS):	8,591 SF
LANDSCAPE AREA PROVIDED:	2,472 SF (29%)
TREES REQUIRED:	3
TREES PROVIDED:	13 (# V1-V13)

PLANT SIZING CALCULATIONS		
REQUIREMENTS: AT LEAST 20% OF THE TREES MUST BE 36" BOX OR LARGER, AT LEAST 30% MUST BE 24" BOX SIZE OR LARGER, AND THE REMAINING 50% MUST BE 15 GALLON SIZE OR LARGER.		
TOTAL TREES	74	
36" BOX TREES OR LARGER (61 TOTAL)	MIN % REQ 20%	% PROVIDED 82%
24" BOX TREES OR LARGER (13 TOTAL)	30%	18%
15 GALLON TREES OR LARGER (0 TOTAL)	50%	-
REQUIREMENTS: SHRUBS MUST BE PLANTED FROM A MINIMUM FIVE (5) GALLON SIZE CONTAINER. ONE GALLON SIZE CONTAINERS MAY BE ALLOWED FOR SHRUBS THAT ARE NOT COMMONLY AVAILABLE IN FIVE (5) GALLON SIZE CONTAINERS, SUBJECT TO APPROVAL BY THE DIRECTOR OF PLANNING AND BUILDING SAFETY.

SHEET
L0.0

GRAND STAIR.
15-2-7D1, HELD 5 FEET FROM PL, THOUGH THEY COULD ENCROACH ANOTHER TWO FEET

12" HT TERRACED RETAINING WALLS
15-2-4 3. A Retaining Wall Located In Any Required Setback, As Depicted In Subsection E, Figures 3a And 3b Of This Section, MAY RETAIN A MAXIMUM OF THREE FEET (3') OF FILL. The Height Of The Retaining Wall Built To Retain The Fill Is Considered As Contributing To The Permissible Height Of A Fence Or Wall.

In A Required Front Setback, A Six Inch (6") Wall Or Fence May Be Erected On Top Of A Wall Which Retains A Maximum Of Three Feet (3'). No Open Work Fence, Above The Maximum FORTY TWO INCH (42") TOTAL HEIGHT, IS ALLOWED IN THE FRONT SETBACK.

TRELLIS ELEMENT, ENCROACHES 2' INTO THE REQUIRED SETBACK BUT DOES NOT REDUCE THE SETBACK TO LESS THAN 3' IN WIDTH.

15-2-7: ENCROACHMENTS:
Encroachments are subject to the following provisions in the indicated zones:
A. All Zones: "ARCHITECTURAL LANDSCAPE FEATURES" as defined in section 15-1-6 of this title may encroach into setbacks as specified in section 15-2-14 of this chapter. In all zones, every required yard must be open and unobstructed from the ground up, EXCEPT THE FOLLOWING INTRUSIONS MAY PROJECT TWO FEET (2') INTO REQUIRED YARDS, PROVIDED THE REQUIRED YARD CANNOT BE REDUCED TO LESS THAN THREE FEET (3') IN WIDTH:.

FIREPLACE (4'WIDTH) ENCROACHES INTO THE REQUIRED SETBACK BUT DOES NOT REDUCE THE SETBACK TO LESS THAN 3' IN WIDTH.

15-2-7: ENCROACHMENTS:
Encroachments are subject to the following provisions in the indicated zones:
A. All Zones: "ARCHITECTURAL LANDSCAPE FEATURES" as defined in section 15-1-6 of this title may encroach into setbacks as specified in section 15-2-14 of this chapter. In all zones, every required yard must be open and unobstructed from the ground up, EXCEPT THE FOLLOWING INTRUSIONS MAY PROJECT TWO FEET (2') INTO REQUIRED YARDS, PROVIDED THE REQUIRED YARD CANNOT BE REDUCED TO LESS THAN THREE FEET (3') N WIDTH:. 3. FIREPLACE STRUCTURES NOT WIDER THAN EIGHT FEET (8') MEASURED IN THE GENERAL DIRECTION OF THE WALL OF WHICH IT IS A PART;

Drivable Grass with Drivable Turf Infill

24" HT PLANTER WALLS
15-2-4 3. A Retaining Wall Located In Any Required Setback, As Depicted In Subsection E, Figures 3a And 3b Of This Section, MAY RETAIN A MAXIMUM OF THREE FEET (3') OF FILL. The Height Of The Retaining Wall Built To Retain The Fill Is Considered As Contributing To The Permissible Height Of A Fence Or Wall.

42" HT PLANTER WALLS

15-2-7: ENCROACHMENTS:
Encroachments are subject to the following provisions in the indicated zones:

PLANTING NOTES:

ALL LANDSCAPING SHALL BE LOW PROFILE AROUND PERIMETER FENCING, WINDOWS, DOORS AND ENTRYWAYS, TAKING SPECIAL CARE NOT TO LIMIT VISIBILITY OR PROVIDE CLIMBING ACCESS. FLORAL OR GRASS GROUND COVER IS RECOMMENDED. BUSHES SHALL BE TRIMMED TO 2 TO 3 FEET AND AWAY FROM BUILDINGS. DENSE BUSHES SHALL NOT BE CLUMPED TOGETHER. THIS PROVIDES A HIDING PLACE FOR CRIMINAL ACTIVITY. TREES SHALL BE TRIMMED UP TO 7 FEET.

TREES/BUSHES/SHRUBS SHALL NOT BE PLANTED NEXT TO OR NEAR ANY LIGHT FIXTURE OR LIGHT STANDARD, WHEN GROWN TO MATURITY THIS LANDSCAPING WILL BLOCK THE LIGHT AND REDUCE LIGHTING ON THE GROUND SURFACE.

This conceptual design is based upon a preliminary review of entitlement requirements and on unverified and possibly incomplete site and/or building information, and is intended merely to assist in exploring how the project might be developed.

PLANTING NOTES:

ALL LANDSCAPING SHALL BE LOW PROFILE AROUND PERIMETER FENCING, WINDOWS, DOORS AND ENTRYWAYS, TAKING SPECIAL CARE TO PLANT VISIBILITY CORRIDORS. CLIMBING VINES OR ORAL OR GROUND COVERS SHALL NOT BE PLANTED. BUSHES SHALL BE TRIMMED TO A TO 3 FEET AND AWAY FROM BUILDINGS. SHRUB BUSHES SHALL NOT BE CLUMPED TOGETHER. THIS PROVIDES A HIDING PLACE FOR CRIMINALS. TREES SHALL BE TRIMMED UP TO 7 FEET.

TREES SHALL BE PLANTED AT A DISTANCE FROM BUILDINGS SO THAT ANY LIGHT FIXTURES ARE NOT OBSTRUCTED BY TREES AT FULL MATURITY. TREES SHALL BE PLANTED AT A DISTANCE TO REDUCE LIGHTING ON THE GROUND SURFACE.

This conceptual design is based upon a preliminary review of entitlement requirements and on unverified and possible boundary site survey information. Elements and site features may be adjusted, moved, or added during the preparation of construction documents.

GENERAL NOTES:

1. Luminaires shall have appropriate UL or other labels as required by local codes.
2. Luminaires shall include accessories for installation according to local and national codes.
3. Contractor shall verify the following prior to ordering luminaires:
   a. locations and recess depths and any structural and other conflicts.
   b. final voltages and ceiling trim compatibility.
   c. ceilings more than 3/4" thick which limits trim compatibility.
   d. luminaires in insulated ceilings, necessitating the need for insulated ceiling type housings.
4. Contractor shall provide approved fire-rated enclosures for luminaires located in a fire-rated ceiling.
5. Responsibility for emergency lighting, code compliance, and circuiting to meet code conformance remains with the Architect and Electrical Engineer as required by law.
6. Contractor shall submit luminaire substitutions prior to bid for review. Contractor shall supply a sample and/or photometric data if requested. If substitution is rejected, Contractor shall provide specified product.
7. Luminaire voltages to be determined by Project Electrical Engineer.
8. All luminaire sockets shall be labeled permanently, in the factory, with wattages indicated in "Lamp Specification" column, not maximum wattages.
9. Electrical Engineer may wire non-adjustable fixtures with emergency circuit(s) and power as needed.

EPA	0.69 ft^2
Weight	27 lbs

Motive is finished with Pangard II®, offered exclusively by Landscape Forms, is a 19 step program of cleaning, priming, and powdercoating that resists rusting, chipping, peeling and fading to produce the finest metal finish available for site furniture and outdoor lighting. In addition, Pangard II® contains no heavy metals and is free of Hazardous Air Pollutants.

Modifications

Don't see what you are looking for? Our goal is to partner with you as the designer to manufacture solutions needed for the space you are creating. We offer the option to modify our standard product to meet certain design specifications or needs. Common modifications can include GCFI outlets, custom RAL colors, banner arm(s) mounting, and custom pole heights. Contact your local Landscape Forms representative to learn more about these offerings.

Motive Area Light

landscapeforms®

Product Data Sheet | AJ500

Motive is a sophisticated family of lights that blurs the line between indoor and outdoor lighting to create out-of-the-ordinary settings. Designed by Justin Champaign, Motive celebrates the beauty of illumination and its interaction with architecture, objects, and space. The luminaires' neutral sculptural form address an array of applications for buildings and grounds, pathways, social spaces, and high-profile areas such as art installations and entrances.

General Description

- Offered in 2 standard heights (10', 12')
- Available with a tapered pole
- Features a hidden indirect light source
- Optional 7-pin twist lock receptacle
- Mounting template and anchor hardware included
- Cast aluminum luminaire ships prewired and fully assembled
- Luminaire mounts standard to a 2 3/8" dia x 3" tenon
- UL Listed, suitable for wet locations
- International Dark-Sky approved

Electrical

Surge protected 100V-277V 50/60 Hz, 0-10V dimmable class 2 driver. Sealed IP66 cartridge provides ease of installation and serviceability. Motive area light ships prewired.

Housing

Round luminaire housing is cast aluminum. Frameless acrylic lens seals to the housing. Luminaire mounts to a tenon on the pole and is secured with three socket head screws. Top cover is secured by three screw on top of the luminaire. All hardware is magni-coated.

Motive Area Light

Light Source: Nichia LEDs
Color Temperature: 2700K, 3000K, 3500K, 4000K
CRI: 80 min
Optics: Matte White or Semi-Specular Aluminum Reflector
Lens: Clear or Frosted Acrylic

Distributions

Lambertian TIV TV

Motive Area Light

landscapeforms®

Product Data Sheet | AJ500

Pole Description

Round pole is tapered 4" to 3" and manufactured from seamless 6061 aluminum tubing and heat treated to produce a T6 temper. Nominal wall thickness is 0.125". Flush mounted hand hole cover includes two magni-coated fasteners. Two piece base cover is cast aluminum. Pole is topped with standard dimension 2-3/8" dia x 4" tenon.

MINI LOOK
BOLLARD WOOD

SPECIFICATION SHEET

Project name:

Type:

Ground mounted bollard suitable for walkways and paths, being a valid alternative to a wall mounted illumination.

Luminaire characteristics:
Power input: 12.5W
Lumens: 334 lm (delivered for 3000K)
Luminaire efficacy: 27 lm/W (for 3000K)

Source: White LED, LM80 tested.
3000K: 90CRI
4000K: 90CRI
Lumen maintenance: >70% of initial lumens at 50 000 hours (L70),(LM-79 tested).

Optics: Accent light.

Material:
Body: Die-cast aluminum and oiled teak wood.
Diffuser: Tempered glass.

Electrical: Universal high efficiency electronic power supply, rated at 50 000 hours, 120-277V.

Mounting: Install with flange accessory or fasten to ground.

Finish: White or burnished bronze

Weight:
S.9206: 4.4lbs (2kg)
S.9211: 9.9lbs (4.5kg).

Warranty: 5 year limited warranty.

Certification: cULus listed for wet location.

Ratings: IP65, IK06

RAMA AREA LIGHT

Product Data Sheet

Designed by Gonzalo Mila, Rama offers a minimalist design, universal aesthetic, and broad versatility. Directional lighting reduces light pollution and puts light where it is needed, and energy-efficient, warm white LEDs with a clear or frosted lens provide excellent performance and a great visual experience. Single or multiple luminaires that can be mounted in different positions on three standard pole heights make Rama suitable for any outdoor space. A simple clamping mechanism allows Rama luminaires to be retrofitted to existing 5" poles. With multiple distribution types and drive currents, Rama provides appropriate light levels for a variety of outdoor spaces and lighting requirements.

General Description

- Single, double, or spiral configurations
- Offered in 3 standard pole heights (4.5m, 6m, 8m)
- Optional ANSI136.41 7-pin twist lock receptacle
- Available in 24 and 48 LED configurations
- Multiple drive currents and distribution types
- Mounting template and anchor hardware included
- Zero up-light, International Dark-Sky approved
- UL Listed, suitable for wet locations

Electrical

120V-277V 50/60 Hz, Class 2 integrated dimmable driver. 1-10V dimming interface is standard, DALI compatible dimming interface available upon request. Rama ships prewired and fully assembled.

Rama R4

Type 2, Type 3, Type 4
Housing: Aluminum extrusion
Lamp: 24 Cree XPG2 LEDs
CCT: 3000K, 4000K
Drive Current: 350mA or 500mA
Lens: Clear / Frosted Glass
Power Supply: 120V-277V
Dimmable: 1-10V or DALI
Protection Rating: IP66

Rama R8

Type 2, Type 3, Type 4
Housing: Aluminum extrusion
Lamp: 48 Cree XPG2 LEDs
CCT: 3000K, 4000K
Drive Current: 350mA or 500mA
Lens: Clear / Frosted Glass
Power Supply: 120V-277V
Dimmable: 1-10V or DALI
Protection Rating: IP66

RAMA AREA LIGHT

Product Data Sheet

To Order Rama

Specify: Product, Lamp, Lens, Drive Current, Color Temperature, Input Voltage, Mounting Option and Finish.

Product	Lamp	Lens	Drive Current*	Color Temp.	Input Voltage	Mounting	Finish
RM Rama	024L2 (R4, 24 LED, Type 2) 048L2 (R8, 48 LED, Type 2) 024L3 (R4, 24 LED, Type 3) 048L3 (R8, 48 LED, Type 3) 024L4 (R4, 24 LED, Type 4) 048L4 (R8, 48 LED, Type 4)	CLR (Clear Glass) FRS (Frosted Glass)	035C (350mA) 05C (500mA)	30K (3000K) 40K (4000K)	UV1 (120-277VAC)	5A (w/ clamp - single mount) 5B (w/o clamp - double mount)	AL (Aluminum Silver)

EXAMPLE: RM – 048L2 – CLR – 035C – 30K – UV1 – 5A – AL

*Driver has an optional Constant Light Output (CLO) setting, which compensates for lumen depreciation by adjusting the power given to the LEDs, allowing light output to remain constant throughout the lifespan of the luminaire. Contact factory for additional details.

To Order Aluminum Rama Pole

Specify: Rama pole with optional 7-pin (ANSI 136.41) Twist Lock Receptacle and Powdercoat Color.

Height	Pole	Luminaire Configuration	Diameter	Wall Thick	Twist Lock
4.5 meters	RM60219-01	(1) or (2) Rama luminaires at top	5"	.125"	No
	RM60219-02	(1) or (2) Rama luminaires at top	5"	.125"	Yes
6 meters	RM60220-01	(1) or (2) Rama luminaires at top	5"	.188"	No

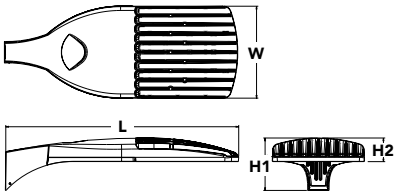
Specifications

EPA:	1.01 ft² (0.09 m²)
Length:	33" (83.8 cm)
Width:	13" (33.0 cm)
Height H1:	7-1/2" (19.0 cm)
Height H2:	3-1/2"
Weight (max):	27 lbs (12.2 kg)



Introduction

The modern styling of the D-Series is striking yet unobtrusive - making a bold, progressive statement even as it blends seamlessly with its environment. The D-Series distills the benefits of the latest in LED technology into a high performance, high efficacy, long-life luminaire.

The outstanding photometric performance results in sites with excellent uniformity, greater pole spacing and lower power density. It is ideal for replacing up to 750W metal halide in pedestrian and area lighting applications with typical energy savings of 65% and expected service life of over 100,000 hours.

DLL480F 1.5 CUL JU	Photocell - SSL twist-lock (480V) [22]
DSHORT SBK U	Shorting cap [22]
DSX1HS 30C U	House-side shield for P1, P2, P3, P4 and P5 [20]
DSX1HS 40C U	House-side shield for P6 and P7 [20]
DSX1HS 60C U	House-side shield for P8, P9, P10, P11 and P12 [20]
PUMBA DDBXD U*	Square and round pole universal mounting bracket (specify finish) [21]
KMA8 DDBXD U	Mast arm mounting bracket adaptor (specify finish) [9]
DSX1EGS (FINISH) U	External glare shield

For more control options, visit DTL and ROAM online.

NOTES
1 HA not available with P4, P5, P6, P7, P9 and P13.
2 P10, P11, P12 or P13 and rotated optics (L90, R90) only available together.
3 Any Type 5 distribution with photocell, is not available with WBA.
4 Not available with HS.
5 MVOLT driver operates on any line voltage from 120-277V (50/60 Hz).
6 Single fuse (SF) requires 120V, 277V or 347V. Double fuse (DF) requires 208V, 240V or 480V.
7 Suitable for mounting to round poles between 3.5" and 12" diameter.
8 Universal mounting brackets intended for retrofit on existing, pre-drilled poles only. 1.5 G vibration load rating per ANCI C136.31. Only usable when pole's drill pattern is NOT Lithonia template #8
9 Must order fixture with SPA option. Must be ordered as a separate accessory; see Accessories information. For use with 2-3/8" diameter mast arm (not included).
10 Must be ordered with PIRHN. Sensor cover available only in dark bronze, black, white and natural aluminum colors.
11 Must be ordered with NLTAIR2. For more information on nLight Air 2 visit this link.
12 Photocell ordered and shipped as a separate line item from Acuity Brands Controls. See accessories. Shorting cap included.
13 If ROAM® node required, it must be ordered and shipped as a separate line item from Acuity Brands Controls. Node with integral dimming.
14 DMG not available with PIRHN, PER5, PER7, PIR, PIRH, PIR1FC3V or PIRH1FC3V, FAO.
15 Provides 50/50fixture operation via (2) independent drivers. Not available with PER, PER5, PER7, PIR or PIRH. Not available P1, P2, P3, P4 or P5.
16 Requires (2) separately switched circuits with isolated neutrol.
17 Reference Controls Option Default settings table on page 4.
18 Reference Motion Sensor table on page 4 to see functionality.
19 Not available with other dimming controls options
20 Not available with BLC, LCCO and RCCO distribution. Also available as a separate accessory; see Accessories information.
21 Must be ordered with fixture for factory pre-drilling.
22 Requires luminaire to be specified with PER, PER5 or PER7 option. See Control Option Table on page 4.
23 For retrofit use only. Only usable when pole's drill pattern is NOT Lithonia template #8

Options

EGS - External Glare Shield

TARGETTI

ZEDGE PRO BOLLARD

Professional LED Bollard

Concept: Professional high-performance LED bollard with an innovative optical system designed to be a true pathway luminaire. Fixture can be used in both indoor and outdoor applications.
Materials: Powder coated anodized die-cast aluminum body and optical head. Consult factory for marine grade cataphoresis painting treatment to be used from ocean shoreline to 1/2 mile inland. Fixtures located in marine environments are not to be in direct contact with salt for extended periods of time or used with corrosive agents.
Source: Two high efficiency LED Chip on Board.
Optics: The internal optical system is composed of 2 metallized polycarbonate reflectors coupled to two high reflective anodized aluminum reflectors and holographic filters. Louver screen in silk-screen printed extra-clear glass. Available in three different versions: DEEP – deep beam, WIDE – wide beam, ADJUSTABLE – that allows to change from one beam to the other in a uniform way by adjusting the 2 optical systems.
Mounting: Available with three different poles heights - 16in, 32in, 40in. 316L grade stainless steel base and stainless steel anti-theft screws. Optional Ground anchor fixing rods for installation in concrete, sold seperately.
Driver: Integrated 4/1 driver (Non-dimmable / 0-10V / Reverse Phase / Forward Phase). Optional integral IOTA emergency battery pack or emergency lighting battery pack. Battery will operate fixture at 100% of full output for 90 minutes. Ambitent temperature must not go below 0°C and must not exceed 50°C.
Finish: Textured Standard Finishes – Ferrite Grey / Heritage Brown / Bronze RAL 8019 / Plaster White / Deep Black / Sandstone Grey
Wattage: 15W
Color Temperature: 2700°K / 3000°K / 3500°K / 4000°K
CRI: Ra84 (2700K, 3000K, 4000K) / Ra90 (3500K)

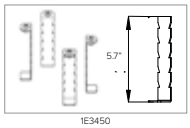
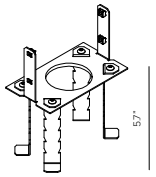
TARGETTI

ZEDGE PRO BOLLARD

MOUNTING (OPTIONAL)	
1E3450	Mounting system. Ground anchor fixing rods for installation in concrete. AISI 316 stainless steel.



1E3450



INSTALLATION ACCESSORIES:	
1US2530	Direct burial brass ingrade j-box. Features stainless steel cover screws and strain relief for power cord, (2) 3/4" NPT bottom holes and (2) 3/4" NPT side holes. Includes (4) 3/4" to 1/2" adaptors and (2) 1/2" NPT plugs. PVC sleeve included, 6"H. **(REQUIRED by NEC)**

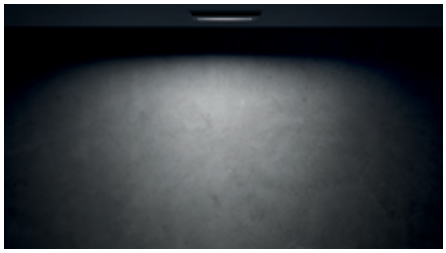
1US2530

Optical Information

ZEDGE Pro has a unique optical system composed of two independent beams that can configured in different ways to create multiple effects. A DEEP version for deep lighting, a WIDE version for greater uniformity of the light in a longitudinal direction and an ADJUSTABLE version where the optical system is positioned on a special bezel that makes it possible to achieve the two most extreme configurations Deep and Wide, as well as all the points in between depending on different needs.

Every beam is produced by a mini flood optic equipped with a special reflective screen that focuses it and conveys it to a refractive holographic filter positioned horizontally. This intuitive design ensures zero candle emission above zero degrees. The filter ovalizes the beam enhancing the effect in depth or in a longitudinal direction, depending on the position of the optic.

ADJUSTABLE
An innovative solution that makes it possible to obtain different lighting effects with one fixture. Calibrating the beam depending on lighting needs it is possible to obtain an infinite number of lighting effects with just one fixture. Using a watertight Allen key the optical system can be rotated passing from a DEEP to a WIDE effect in a fluid way choosing between a myriad of positions in between to select the one most suitable to meet the project needs.



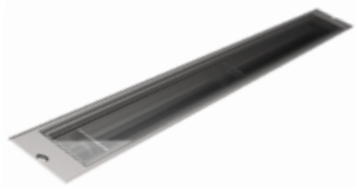
DEEP
For deep lighting of horizontal surfaces where the priority is to light open spaces or wide pathways.

WIDE
For lighting where illuminance uniformity is essential, for example on long private or public walkways with wide spaces between fixtures.

TARGETTI

JEDI COMPACT RECESSED IP67 INTEGRAL

Recessed Linear LED with Integral Driver



Concept: Powerful recessed linear LED with integral driver.
Materials: Extruded anodized aluminum 15µ body. 5mm thick extra-clear flat glass.
Optic: Internal optical system composed of a primary cylindrical glass lens, a high reflectance anodized aluminum reflector and an integrated holographic filter. Available in three versions: Flood, Grazing and Wall Washer.
Source: High Power High Efficiency LED board.
Mounting: Installation sleeve required for recessed flush mounting (sold separately). Fixture includes screw down holes and stainless steel screws for attachment to installation sleeve.
Driver: Integral 0-10V dimable electronic driver.
Installation: To be completed with recessed installation sleeve, see page 2. Pre-wired from driver enclosure, 10ft direct burial cable with seperate 0-10V dimming cable. Lead and Solo configurations provided with 10ft lead cable. See page 3 for inline connection configurations.
Wattage: 28W / 40W / 53W
Color Temperature: 2700K / 3000K / 3500K / 4000K
CRI: Ra84, Ra90 available upon request

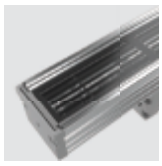
Refer to pages 4-9 for complete fixture data information.
Lumen Maintenance (L70): 50,000hrs
Calculation for LED fixtures are based on measurements that comply with IES LM-80.
Voltage: Universal Voltage 120-277V AC 50/60Hz
IK Rating: IK08
IP Rating: IP67
Load Rating: Resistant to static loads up to 4,000 lbs.
Certifications: cULus listed Wet Location Listed
Tested in accordance with LM-79-08
Warranty: 5 year limited warranty



Integrated Louver Option
Integrated anti-glare louver option pre-installed inside the fixture.

TARGETTI

KEPLERO MINI GIMBAL Performance Precision Optic

Professional Inground LED Fixture

Concept: 4 LED projector incorporating maximum precision and control for specific aimed illumination of objects.
Housing: 8" tall x 6.625" diameter die-cast aluminum housing.
Materials: Anodized and powder coated black die-cast aluminum heat sink body. PVC installation sleeve and stainless steel (AISI316L) trim ring with extra clear glass. Body completed with marine grade cataphoresis painting treatment. Fixtures located in marine environments are not to be in direct contact with salt for extended periods of time or used with corrosive agents. Stainless steel trim will need to be maintained and cleaned regularly to avoid mineral deposits.
Trim: Stainless steel (AISI316L) trim available in ultra flat round or square decorative rings, with beveled edge in brushed natural, bronze or black finishes. Features tamper-proof Torx screws.
Optic: 4 LED gimbal optical system with two different beam spreads; Narrow Spot 11° and Flood 31°. Light beam can be tilted +/-20° on the vertical plane and rotated 355° on the horizontal plane with integral locking system.
Mounting: Flush and semi-flush installation sleeves or optional raised installation tube for landscape. Fixture includes screw down holes and stainless steel screws for attachment to installation sleeve. Includes optional stainless steel L brackets for support mounting. installation sleeve (required) for flush or semi-flush mounting.
Driver: Integrated 4/1 driver (Non-dimmable / 0-10V / Reverse Phase / Forward Phase).
Installation: Fixture flush mount installation includes 8" tall x 6.625" diameter sleeve, extension pipe for wire slack and accessibility. Pre-cabled with 6ft IP68 connector cable, direct burial brass ingrade jbox (required, sold separately).
Wattage: 11W
Color Temperature: 3000K / 4000K
CRI: Ra84
Lumen Maintenance (L70): 50,000hrs
Calculation for LED fixtures are based on measurements that comply with IES LM-80.
Voltage: Universal Voltage 120-277V AC 50/60Hz
IK Rating: IK10
IP Rating: IP67*, IP68 Tested**
Load Rating: Resistant to static loads up to 4,496lbs in flush mounted cement and pavement installations.
Certifications: cULus Wet Listed E477426
Tested in accordance with LM-79-08
Energy efficient for California installations.
Warranty: 5 year limited warranty
* Up to 1 METER DEPTH of water for up to a maximum of 30 MINUTES
** Not suitable for submersible installations

SPECIFICATIONS

DESCRIPTION:
Powerful adjustable accent LED light. Suitable for wet/damp/dry location installations. Dimmable integral driver.

MATERIAL:
Standard overall material is 6061 aluminum.
HL-915 - Machined Aluminum

FINISH:
AA - Anodized Satin Aluminum
AP - Powder Coat Aluminum
BK - Powder Coat Black
BZ - Powder Coat Bronze
WT - Powder Coat White

LED OPTIONS:
Integral high output LED.
5 - 7.1 watts power consumption. 300 lumens at 3000K.
15 - 11.5 watts power consumption. 950 lumens @3000K.
CCT - Correlated Color Temperature
27 - 2700K (optional)
30 - 3000K (standard)
40 - 4000K (optional)

Optics - Five beam angles available.
SP - 14º Spot
NF - 25º Narrow Flood
NFL - 31º Narrow Flood
FL - 40˚ Flood
WFL - 60º Wide Flood

VOLTAGE:
12 - 12-VAC output transformer required, not included.

MOUNTING:
Fixture is designed with a 1/2" NPS adjustable mounting stem.

OPTIONS:
Glare shields
GL-915 - Angled, aluminum
GL-916 - Straight, aluminum

Lenses/Louvers/Color Filters
LA-1-20 - Hexcell Louver (Black)
LA-2-20 - Prismatic lens
LA-3-20 - Linear spread lens
LA-4-20 - Soft focus lens (diffused)
LA-5-20 - Moonlight lens
LA-6-20 - Blue lens

See fixture accessories for more information.

*Two (2) terminators are included with the 10' and 50' power cable. One Leader need per circuit/fixture run. Cables are not plenum rated.
** If using the 5' or 1' power cable assembly as a leader to power a run one set of CBL-3P-L-UNV-CAPS will also be need per cable.

0-10V CONTROL OPTIONS

100-120VAC / 277VAC Linear Dimming Control Module 0-10V - Plenum Rated **LDCM-PL-120-277-010V-GR**
All products come standard with ELV dimming capabilities. 0-10V Control options required for operation at 0-10V.

OPTIONAL ACCESSORIES

Mounting

Mounting Track and Clips Set, 48 Inch Track, 8 Clips	**MNT-L-TRKCLIP-48**	48" track and clips set will work with one 48" fixture or four 12" fixtures.
Mounting Track and Clips Set, 12 Inch Track, 2 Clips	**MNT-L-TRKCLIP-12**	12" track will not work with 48" fixtures.
Mounting Track Clip, TROV, Set of 2	**MNT-L-CLIP**	Clips needed = 12" fixtures need 1 set of 2 and 48" fixture needs 2 sets of 2.
90 Degree L bracket, TROV, Set of 2	**MNT-L-LBKT**	L-Brackets needed = 12" fixtures need 1 set of 2 and 48" fixture needs 1 set of 2.
Angle Locking Clip, TROV, Pack of 10	**MNT-L-ANGLOCK**	Angle Locks needed = 12" fixtures need 1 and 48" fixtures need 2. (Must order separately)
Mounting, Fine Adjustment Bracket, TROV	**MNT-L-FAB**	Fine Adjustment Brackets needed = 12" fixtures need 1 and 48" fixtures need 2.

*Fine Adjustment Bracket is highly recommended for Grazing Optics.

Mounting, Fine Adjustment L-Bracket, TROV	**MNT-L-LFAB**	Fine Adjustment L-Brackets needed = 12" fixtures need 1 and 48" fixtures need 2.

*Fine Adjustment L-Bracket is recommended for Asymetric Optics when aiming is needed.

Snap-on Lenses

Snap-on Lens, Frosted, 12 inch, L50	**LENS-L50-FROST-12**	Snap-on Lenses need = One 12" lens is needed per 12" fixture and one 48" lens is needed per 48" fixture. Snap on Lenses will not work with the asymmetric fixture. Clear lenses can be used to hold colored filters to customize the output color of any TROV fixture, except the ASYM. Color filters supplied by others.
Snap-on Lens, Frosted, 48 inch, L50	**LENS-L50-FROST-48**	
Snap-on Lens, Clear, 12 inch, L50	**LENS-L50-CLEAR-12**	
Snap-on Lens, Clear, 48 inch, L50	**LENS-L50-CLEAR-48**	

Wall Mount Arm

Wall Mount Arm, 6 inch, TROV	**WMA-L-CA-06**	Wall Mount Arms needed = For individual fixture installations two arms and one end set will be needed per fixture. For continuous run installation one endset will be needed per run. Each end set contains one left and one right end plate. One joining set wll be needed per joint. One arm per fixture will be need plus one extra arm to complete the run. For example: A 10ft run made with two 4ft and two 1ft fixtures will contain; 1 x WMA-L-END, 3 x WMA-L-JNR, and 5 x WMA-L-CA-12. Leader cables are not included with wall mount arms, end sets, or joiners sets.
Wall Mount Arm, 12 inch, TROV	**WMA-L-CA-12**	
Wall Mount Arm, 18 inch, TROV	**WMA-L-CA-18**	
Wall Mount Arm, 24 inch, TROV	**WMA-L-CA-24**	
Wall Mount Arm End Plate Set, TROV, Includes Left and Right	**WMA-L-END**	
Wall Mount Arm Joiner Plate, TROV	**WMA-L-JNR**

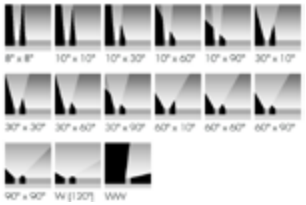
Optics



Description

The Lumenfacade Nano Color Changing is a high-efficiency linear LED luminaire that goes where no facade lighting has gone before. Available in 12 in, 24 in, 36 in or 48 in sections, the Lumenfacade Nano Color Changing packs all the bells and whistles of the larger members of the Lumenfacade family and can be configured with a wide number of options, including: optics for grazing, floodlighting, or wall washing; RGB, RGBW or RGBA color mixing; various mounting options, finishes and controls. The Lumenfacade Nano Color Changing is also available with a unique asymmetric distribution, providing exceptional uniformity and brightness for walls and signage.

Features

Color and Color Temperature	Additive RGB, Additive RGB + white 4000K, Additive RGB + amber
Optics	8° x 8°, 10° x 10°, 10° x 30°, 10° x 60°, 10° x 90°, 30° x 10°, 30° x 30°, 30° x 60°, 30° x 90°, 60° x 10°, 60° x 60°, 60° x 90°, 90° x 90°, Wide 120°, Asymmetric Wallwash
Options	Corrosion-resistant coating for hostile environments
Power Consumption	4 W/ft
Warranty	5-year limited warranty

Performance

Delivered Output	724 lm (48 in fixture, RGB full output, 8° x 8°, UCTL), 868 lm (48 in fixture, RGBW full output, 8° x 8°, UCTL), 748 lm (48 in fixture, RGBA full output, 8° x 8°, UCTL)
Delivered Intensity	19,566 cd at nadir (48 in fixture, RGB full output, 8° x 8°, UCTL), 23,462 cd at nadir (48 in fixture, RGBW full output, 8° x 8°, UCTL), 20,211 cd at nadir (48 in fixture, RGBA full output, 8° x 8°, UCTL)
Illuminance at Distance	Minimum 1 fc at 153 ft (48 in fixture, RGB full output, 8° x 8°, UCTL), Minimum 1 fc at 168 ft (48 in fixture, RGBW full output, 8° x 8°, UCTL), Minimum 1 fc at 156 ft (48 in fixture, RGBA full output, 8° x 8°, UCTL)

Optical option installation details

HFR - Half-frosted lens

- Always position frosted side toward the wall.
- Applicable for 8° x 8°, 10° x 10° or asymmetric wallwash optics only.

WW - Asymmetric wallwash

Recommended setback from wall is 1/10 of the wall height.

Example: 2 ft setback for a 20 ft wall.

Mounting options

One mounting bracket provided for 12 in fixtures. Two mounting brackets provided for 24 in, 36 in and 48 in fixtures. See installation instructions for details.

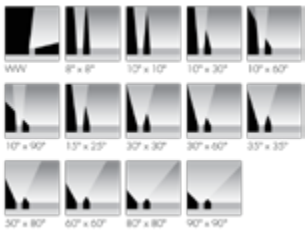
Optics



Description

The Lumenfacade is a high-performance linear LED luminaire for grazing or floodlighting exterior walls and facades. Featuring second generation LED technology, the luminaire is available in 12 in, 24 in, 36 in or 48 in sections, and can be configured with a wide number of options, including: optics for grazing or flood lighting; a choice of outputs (ASHRAE 5 W/ft, RO 8.5 W/ft or HO 15.25 W/ft); various color temperatures or static colors; various mounting options, finishes, accessories and controls. The Lumenfacade is also available with a unique asymmetric wallwash distribution, providing exceptional uniformity and brightness for walls and signage.

Features

Color and Color Temperature	2200K, 2700K, 3000K, 3500K, 4000K, Red, Green, Blue
Length (nominal)	12 in, 24 in, 36 in, 48 in
Optics	Asymmetric Wallwash, 8° x 8°, 10° x 10°, 10° x 30°, 10° x 60°, 10° x 90°, 15° x 25°, 30° x 30°, 30° x 60°, 35° x 35°, 50° x 80°, 60° x 60°, 80° x 80°, 90° x 90°
Options	End-to-end configuration (factory installed 16 in black input cable included), Corrosion-resistant coating for hostile environments, 3G ANSI C136.31-2010 Vibration Rating for bridge applications, CE (certification covers European Economic Area)
Power Consumption	5 W/ft (meets ASHRAE standards for linear lighting on building facades - not available for 12 in fixture lengths), 8.5 W/ft (RO version), 15.25 W/ft (HO version), Typically 20% higher for 12 in fixture lengths
Warranty	5-year limited warranty

Performance

Illuminance at Distance	Minimum 1 fc at 133 ft (HO 4000K, 48 in fixture, 10° x 60°, DMX/RDM)
Color Consistency	2 SDCM, 3 SDCM (2200K)

Notes:

1. ASHRAE version not available for 12 in fixture lengths.
2. Power consumption is typically 20% higher for 12 in fixture lengths.
3. 347 volts available, consult factory for details.
4. To connect 12 in fixture lengths to the Lumentalk system, DIM or DMX/RDM must be specified as the control option, and a Lumentalk Data Bridge (LDB) is required. See the typical wiring diagrams in the specification sheet for details.
5. Consult factory for availability of static Royal Blue, 6500K and 90+ CRI.
6. Static colors made to order 8-10 weeks.
7. For best results use with HO fixtures at a 6 in setback from surface. Contact factory for application support.
8. Suitable to use when 3GV option is specified.
9. Lumenpulse offers a wide selection of RAL CLASSIC (K7) colors with a smooth texture and high-gloss finish. Please consult factory for a list of available K7 colors, other RAL textures and glosses, or to match alternate color charts. Final color matching results may vary.
10. Setup charges apply for RAL colors. Consult factory for details.
11. Longer lead times can be expected for custom RAL color finishes.
12. Available for 24 in, 36 in and 48 in fixture lengths only.
13. A Lumentranslator 2 (LTL2) and LumentalkID (LIDLT) must be specified for Lumentalk applications. Consult Lumentranslator 2 and Lumentalk pages and specification sheets for details.
14. Available for 24 in (ASHRAE and RO only), 36 in and 48 in fixture lengths only.
15. A control box (CBX) and LumenID (LID) must be specified.
16. Use only when exposed to salt spray and harsh chemicals. This option is not required for normal outdoor exposure.
17. Setup charges apply. Consult factory for details.
18. Available with UMP and UMAS mounting options only.
19. Consult European specification sheet and installation instructions for CE wiring information.

Shown with HLO 1.0" drop

DESCRIPTION

Efficient and flexible, the Via 2 recessed features numerous optical configurations including flush, regressed and drop diffusers. Via 2 can be installed as discrete luminaires, continuous runs, and patterns, with a wide range of lumen packages, color choices, and electrical and controls options. Via 2 is part of the larger Via family, which includes visually coordinated recessed and mounted luminaires, as well as other light distributions, including wall washing and asymmetric optics, and ChromaWerx (see separate specification sheets).

OPTICS

High Efficiency Lambertian Optic (HLO) shielding of diffusing 0.075" thick acrylic provides up to 88% transmission and good source obscuration. Matte white reflectors distribute LED output across the shielding. Luminaire brightness is controlled by the ratio of luminous flux to shielding area. HLO is available as a flush diffuser or as a drop diffuser, extending 0.5" or 1.0" below the luminaire housing. Drop diffusers are extruded with glued end caps. HLO optics have a Spacing Criteria of 1.06.

LIGHT SOURCE - LED

Custom linear array of mid-flux LED's are cartridge-mounted with quick-connect wiring to facilitate service and thermal management. Available in 3000K, 3500K and 4000K with a minimum 80 CRI and an option for 90 CRI with elevated R9 value. Color consistency maintained to within 3 SDCM. LEDs operate at reduced drive current to optimize efficacy and lumen maintenance.
All LEDs have been tested in accordance with IESNA LM-80-08 and the results have shown L80 lumen maintenance greater than 60,000 hours. Absolute product photometry is measured and presented in accordance with IESNA LM-79, unless otherwise indicated.

LUMINAIRE LENGTH

Via 2 is made up of standard 2, 3, 4, 5, 8 and 12 foot sections that may be joined together to create longer continuous run lengths. Exact run length must be noted in the product code. The minimum individual section available is 2 foot.

All individual sections are joined together onsite using the joiner kits provided. LumenWerx offers joiner kits that are extremely simple to work with in the field and result in a fixture that appears virtually seamless with no light leak at any connection.

ELECTRICAL

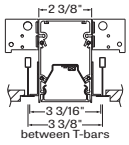
Factory-set, adjustable output current LED driver with universal (120-277VAC) input. Dimmable from 100% to 1% with 0-10V dimming control. Rated life (90% survivorship) of 50,000 hours at 50°C max. ambient (and 70°C max. case) temperature. At maximum driver load: Efficiency>84%, PF>0.9, THD<20%. Other specifiable options include Lutron Hi-Lume 1% (specify 2-wire, or Ecosystem Dim-to-Off), Lutron 5-Series (5% Ecosystem), DMX (RDM compatible) and DALI protocol drivers. All of our standard 0-10V drivers are NEMA 410 compliant.

EMERGENCY

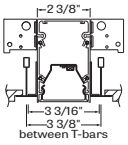
Factory installed long life high temperature recyclable Ni-Cad battery pack with test switch and charge indicator, minimum of 90 minutes operation, up to 1000 lumens per 4ft (25°C) emergency lighting output. Recharge time of 24 hours.

MOUNTING OPTIONS

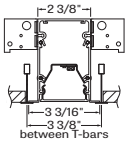
Recess mount into exposed or concealed T-Bar or Tegular grid ceiling



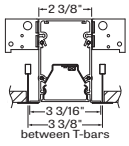
TG9 - tegular 9/16"



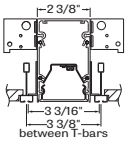
TG15 - tegular 15/16"



TB9 - t-bar 9/16"

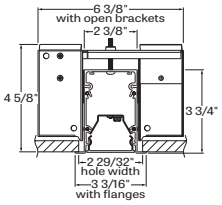


TB15 - t-bar 15/16"

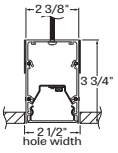


ST - screw slot t-bar

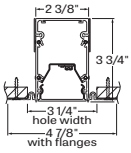
Mounting for drywall ceilings are available with visible trim, mud flange trim or trimless



DTR - drywall trim



DTL - drywall trimless



DMF - drywall mud flange

FINISH

Interior - 95%, reflective matte powder coated white paint
Exterior - matte white or aluminum powder coating.
Custom finishes are also available.

The striking, industrial shapes in the Soho collection are reminiscent of the lamps that were traditionally used in markets and taverns, but they contrast through the use of thoroughly contemporary materials and textures.

Lightology

Sword Wall Light

PRODUCT NUMBER SON421505

DESIGNER Robert Sonneman
BRAND SONNEMAN - A Way of Light

DESCRIPTION

The Sword Wall Light is made of aluminum in Textured Gray, Textured White or Textured Bronze finish and features a rectangular blade of light. Includes 13 watts 3000K color temperature LED, 90CRI, 1190 lumens, and LED driver which fits inside junction box. 24.25 inch height x 1.75 inch width x 2.75 inch depth. 4.5 inch width x 4.5 inch height canopy. UL listed. ADA compliant. Wet location rated.

Shown in: Textured Gray

SHADE COLOR	N/A
BODY FINISH	Textured Gray
LAMP	1 x LED/13W/120V LED
WATTAGE	13W
DIMMER	Low Voltage Electronic
DIMENSIONS	1.75"W x 24.25"H x 2.75"D

Technical Information

LUMINOUS FLUX	1190 lumens
LUMENS/WATT	91.54
LAMP COLOR	3000 K
COLOR RENDERING	90 CRI

PRODUCT NUMBER SON421505

LED recessed wall - shielded

BEGA

Application
Designed for low mounting heights for interior and exterior locations, the shielded light distribution is ideal for the glare-free illumination of ground surfaces, building entrances, stairs, and footpaths.

Materials
Luminaire housing and faceplate constructed of die-cast marine grade, copper free (≤0.3% copper content) A360.0 aluminum alloy
White safety glass
High temperature silicone gasket
Mechanically captive stainless steel fasteners

NRTL listed to North American Standards, suitable for wet locations
Protection class IP65
Weight: 2.2 lbs

Electrical

Operating voltage	120-277V AC
Minimum start temperature	-30° C
LED module wattage	3.9 W
System wattage	6.0 W
Controllability	0-10V dimmable
Color rendering index	Ra > 90
Luminaire lumens	159 lumens (3000K)
Lifetime at Ta = 15° C	>500,000 h (L70)
Lifetime at Ta = 45° C	172,000 h (L70)

LED color temperature

☐ 4000K - Product number + **K4**
☐ 3500K - Product number + **K35**
☐ 3000K - Product number + **K3 (*EXPRESS*)**
☐ 2700K - Product number + **K27**
☐ Amber - Product number + **AMB**

BEGA can supply you with suitable LED replacement modules for up to 20 years after the purchase of LED luminaires - see website for details

Finish
All BEGA standard finishes are matte, textured polyester powder coat with minimum 3 mil thickness.

Available colors ☐ Black (BLK) ☐ White (WHT) ☐ RAL:
☐ Bronze (BRZ) ☐ Silver (SLV) ☐ CUS:

L-011-P

The L-011-P is a single, brass, projection fixture for landscape applications.

Construction All brass components. 0.140" [3.6mm] thick brass housing.

Lens Dual Convex Optical Glass

L-011-P 12 Volts, remote transformer required

MR16 Halogen GU5.3, 50 Watts max.
__ **FMV** 35 Watt 24° narrow flood
__ **EXZ** 50 Watt 24° narrow flood

MR16 LED Soraa chipset, GU5.3 Warm White (3000K)
__ **8W-NFL** 8 Watt 25° narrow flood

L-011-P-120V 120 Volts
L-011-P-230V 230 Volts

MR16 LED Soraa chipset, GU10 Warm White (3000K)
__ **8W-SP** 8 Watt 10° spot

L-011-P-MH-120V 120 Volts, Ceramic Metal Halide, remote ballast required
L-011-P-MH-230V 230 Volts

MR16 metal halide GX10 Warm White (3000K)
__ **MH20MR16SP** 20 Watt 12° spot
__ **MH39MR16SP** 39 Watt 12° spot

Optical Accessories
__ **BGS9** Brass glare shield, 45° cutoff

Metal gobos are 8 mil stainless steel, 51.5mm diameter, with high levels of nickel and chromium to provide long life and excellent image quality. Any gobo pattern, including custom designs, can be ordered with up to a 35mm diameter pattern area, though 29mm is recommended.

__ **AMPH** Amorphous
__ **EP** Egyptian Palms
__ **WP** Wild Palms
__ **CUSTOM** Consult sales rep for art specifications

Mounting Accessories
1/2" male threads. Mounts into any standard j-box or:
__ **GS2** Heavy-duty ground spike
__ **GS2BC** Heavy-duty ground spike with cast brass cap
__ **GS4** *Standard ground spike with cast brass cap
__ **JB** Cast brass junction box
__ **SA** Sure Aim locking rotation accessory
__ **TDM1** *Brass tree/deck mount with stainless steel screws
__ **TDM2-__** *Brass tree mount with nylon strap (**48, 72,** or **96"**)
__ **TDM2SS-__** *Brass tree mount with stainless steel strap (**48, 72,** or **96"**)
__ **TDM3** *Brass low-profile deck/wall mount *(**SA** accessory recommended)*
__ **TDM4** *Brass low-profile tree mount with notch for wire *(**SA** accessory recommended)*
__ **TMJB-__** Brass tree-mounted junction box, single fixture mount, stainless steel strap (**48, 72,** or **96"**)
__ **TMJB2-__** Brass tree-mounted junction box, double fixture mount, stainless steel strap (**48, 72,** or **96"**)
__ **TMJBX** Brass tree-mounted junction box, single fixture mount, stainless steel screws
__ **TMJB2X** Brass tree-mounted junction box, double fixture mount, stainless steel screws
* This accessory for 12 Volt fixture only.

Finish: Unfinished is standard; no specification required. The fixture will weather to a natural patina. The patina process is natural with brass and copper. Rate of patina and eventual color is dependent upon climate and proximity to the ocean. Thus, Beachside does not guarantee any specific appearance.

IP 66
CSA Listed, file #190030
10 year fixture warranty
3 year warranty on MR16 LED lamps

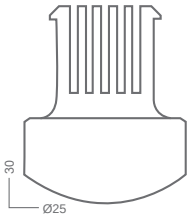
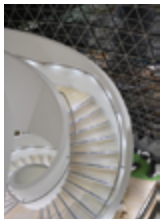
KLIK LEDpod™ 40 Patented





Description

Discrete, seamless point source LED fixture for use in all code-compliant handrail, especially curving ramps and helical stairs as well as long runs on bridges and pedestrian paths. Asymmetric optic allows mounting at rail nadir, eliminating uncomfortable glare issues.

Housing

Clear anodized aluminum body as standard. Color-match anodized or bronze body as options, consult factory.

Aluminum body has a fine 25-micron finish and is then hard-coat anodized, thus preventing galvanic corrosion. Silicone gasket seals the installation from water ingress and provides added means of electrical isolation to minimize potential for galvanic reaction.

Mounting

Patented attachment method offers unparalleled security and ease of mounting. Requires only a simple drilled hole in railing material, eliminates threading, gluing or exposed fasteners common among other handrail fixtures. All conductors remain internal to railing to provide secure and safe wiring. IK10 Impact rating ensures vandal resistance. Tamperproof anti-theft option available for extreme environments; consult factory.

- Tube Size: Ø 1.5" - 1.75", Max. wall .2" *Other sizes available upon request*
- Cut Out: 25mm
- Weight: 0.16 LBS

Electrical/LED Driver

- Input Voltage: 24 VDC
- Operating Temp: -40 to 120° F
- Efficiency: 88 lm/W
- Driver: Must use class 2 driver
  - Primary Driver: 110 - 277 VAC UL Listed Constant Voltage
  - Secondary Driver: 350 - 500mA Constant Current (provided with fixture)
- Control: DALI, 0-10V, DMX
  - DMX control for dimming only, not for individually addressed LEDpod
- Enclosure: Minimum NEMA 3R required
- Wire connectors provided; factory pre-wire available, consult factory

*Please note, all KLIK fixtures are now dimmable as standard

Listings

- ETL listed, UL 1598/CSA 22.2; CE
- cETL
- IP65 rated *All IP rated luminaires tested to AS60529-2004 Degrees of protection provided by enclosures (IP Code)*
- IK10 Impact Resistance
- Wet location rated

Product Codes

Follow the steps to specify your fixture. Enter Product Code in field at top of page. Example: **LP4030KA40**

Fixture Type	Rail Size[1,2]	Color[3]	Distribution	Rail Wall Thickness[4]	Lens Option
LP LEDpod	**40** 1.50" Tube -or- 1.66" Pipe	**27K** 2700K **30K** 3000K **35K** 3500K **40K** 4000K **AMB** Amber	**A** Asymmetric **S** Symmetric	**1512** 1.5" x 11ga Tube (.12 wall) **1513** 1.5" x 1/8 Wall Tube **05** Sch 5 Pipe **10** Sch 10 Pipe **40** Sch 40 Pipe **80** Sch 80 Pipe **CUST** Non-stock	Clear lens standard Add **FRS** for frosted diffused lens Add **OTK** for Optek-film diffused lens

1. Additional sizes are available as special order, contact factory for rail dimensions other than those shown on this sheet.
2. Bronze material requires a special clip, contact factory for more information.
3. Also available in blue (BLU), green (GRN), red (RED), and custom color temperature (as special order).
4. Wall thickness of 0.120" is common to steel & stainless; wall of 0.125" common to aluminum
5. *Additional charges and lead time apply for this feature.*
6. Tamper proof option offers additional protection in extreme environments. *Additional charges and lead time apply for this feature.* To specify; add "TP" to product code.
7. To Specify 1.5 Watt; add "0350" to product code.

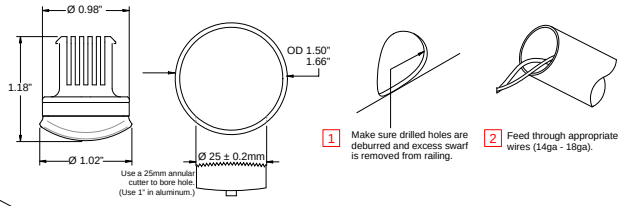
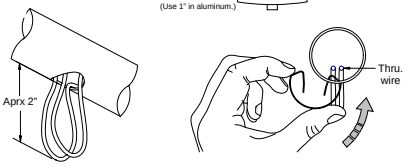
Installation Instructions *Additional instructions may apply, consult factory.*



1 Make sure drilled holes are deburred and excess swarf is removed from railing.

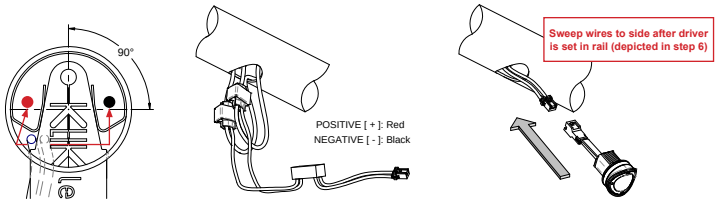
2 Feed through appropriate wires (14ga - 18ga).



3 Pull a loop of wire through hole.

4 Rotate retaining clips in as shown. Avoid tangling or severing through wire.

5 Apply pressure as shown to deform clip into place in a circular motion. Avoid damaging the surface of tube and tangling or severing through wire.

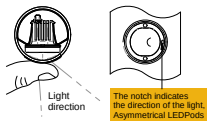


6 Fit clip into place until the clamping ends are equally centered over the hole. Use the tool to center the clip until equal pressure can be felt and inspect by eye.

7 Install Scotchlok connectors to the red and black wires. Connect the corresponding color wires of the driver to the Scotchloks and assure the clip is secured.

8 CAREFULLY feed the Scotchloks to the left of the clip and the driver to the right with the driver connector hanging out. Ensure wires are clear from where the LEDPOD is to fit.

Proceed to connect the LEDPOD.



9 Push LEDPOD in until it snaps into place and the outer surface is flush with the outer surface of the tube.

Prod the rim of the clear silicone IP Seal to provide a tighter fit.

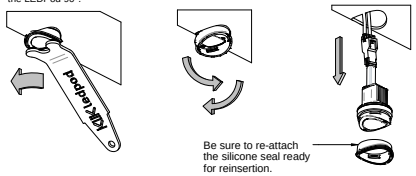
LEDPOD Removal Steps

1 Insert removal tool into the 2mm holes in the LEDPOD.

With firm pressure, rotate the LEDPod 90°.

2 Carefully peel back the IP silicone seal one side at a time.

3 Carefully remove the LEDPOD from the clip, ensuring not to damage or disconnect wires in the process.



Be sure to re-attach the silicone seal ready for reinsertion.

1.0 INTRODUCTION

1.1 Purpose of Analysis and Study Objectives

This Air Quality, Energy, and Greenhouse Gas (GHG) Emissions Impact Analysis has been completed to determine the air quality, energy, and GHG emissions impacts associated with the proposed 1950-1960 East Grand Avenue Project (proposed project). The following is provided in this report:

- A description of the proposed project;
- A description of the atmospheric setting;
- A description of the criteria pollutants and GHGs;
- A description of the air quality regulatory framework;
- A description of the energy conservation regulatory framework;
- A description of the GHG emissions regulatory framework;
- A description of the air quality, energy, and GHG emissions thresholds including the California Environmental Quality Act (CEQA) significance thresholds;
- An analysis of the conformity of the proposed project with the South Coast Air Quality Management District (SCAQMD) Air Quality Management Plan (AQMP);
- An analysis of the short-term construction related and long-term operational air quality, energy, and GHG emissions impacts; and
- An analysis of the conformity of the proposed project with all applicable energy and GHG emissions reduction plans and policies.

1.2 Site Location and Study Area

The project site is located in the City of El Segundo (City) and consists of two (2) parcels of land (1950 East Grand Avenue and 1960 E Grand Avenue; collectively, the "project site"). 1950 East Grand Avenue is 2.685 acres and currently contains an 11-level 819 parking space parking structure at the rear of the property. 1960 East Grand Avenue is 2.685 acres and currently contains a 12-story office building near the front of the property. The 5.37 acre total project site is bounded by Grand Avenue and office buildings to the north, office buildings to the east, a hotel and surface parking lot to the south, and a parking structure to the west. The project local study area is shown in Figure 1.

Sensitive Receptors in Project Vicinity

The nearest sensitive receptors to the project site are guests at the hotel located as near as 10 feet south of the project site. The nearest residents are at the multifamily homes at the northwest corner of Holly Avenue and Indiana Street that are located as near as 1,150 feet northwest of the project site. The nearest school is El Segundo Middle School that is located as near as a half mile west of the project site.

1.3 Proposed Project Description

A summary of the development proposed as part of the proposed project is detailed below and the proposed project site plan is shown in Figure 2.

1) On 1950 East Grand Avenue: Demolition of an existing 79-space surface parking lot and a row of 8 angled parking spaces located at the front of 1950 East Grand Avenue. Construction of a 4-story 93,559 net square foot office building with a mezzanine level that would contain a lobby area, a café/deli and two tenant spaces. On the west side of the new office building there will be an outdoor patio area and a truck loading area with two small truck loading spaces. A new backup diesel generator would be located on the north side of the existing parking structure and a new 23-space surface parking lot would be constructed on the east side of the existing parking structure in the rear of the lot.

2) On 1960 East Grand Avenue: Demolition of a passive open space area that currently contains walkways, with a few tables and benches. Construction of a 4-level 258 space parking structure.

3) Between the existing 12-story office building at 1960 East Grand Avenue and the new office building at 1950 East Grand Avenue: Construction of a large outdoor landscaped plaza with outdoor seating, and two outdoor firepits adjacent to the seating areas in order to provide a cohesive pedestrian-oriented office campus. A new fire lane will be constructed on the south side of the existing and new office buildings and will run from the driveway on the west side to the driveway on the east side of the project site.

1.4 Executive Summary

Standard Air Quality, Energy, and GHG Regulatory Conditions

The proposed project will be required to comply with the following regulatory conditions from the SCAQMD and State of California (State).

South Coast Air Quality Management District Rules

The following lists the SCAQMD rules that are applicable, but not limited to the proposed project.

- Rule 402 Nuisance – Controls the emissions of odors and other air contaminants;
- Rule 403 Fugitive Dust – Controls the emissions of fugitive dust;
- Rule 445 Wood Burning Devices – Controls the emissions from fire places and fire pits;
- Rules 1108 and 1108.1 Cutback and Emulsified Asphalt – Controls the VOC content in asphalt;
- Rule 1113 Architectural Coatings – Controls the VOC content in paints and solvents; and
- Rule 1143 Paint Thinners – Controls the VOC content in paint thinners.

State of California Rules

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to the proposed project.

- CCR Title 13, Article 4.8, Chapter 9, Section 2449 – In use Off-Road Diesel Vehicles;
- CCR Title 13, Section 2025 – On-Road Diesel Truck Fleets;
- CCR Title 24 Part 6 – California Building Energy Standards; and
- CCR Title 24 Part 11 – California Green Building Standards.

Summary of Analysis Results

The following is a summary of the proposed project's impacts with regard to the State CEQA Guidelines air quality, energy, and GHG emissions checklist questions.

Conflict with or obstruct implementation of the applicable air quality plan?

Less than significant impact.

Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard?

Less than significant impact.

Expose sensitive receptors to substantial pollutant concentrations?

Less than significant impact.

Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than significant impact.

Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation;

Less than significant impact.

Conflict with or obstruct a state or local plan for renewable energy;

Less than significant impact.

Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than significant impact.

Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs?

Less than significant impact.

1.5 Mitigation Measures for the Proposed Project

This analysis found that implementation of the State and SCAQMD air quality, energy, and GHG emissions reductions regulations were adequate to limit criteria pollutants, toxic air contaminants, odors, and GHG emissions from the proposed project to less than significant levels. No mitigation measures are required for the proposed project with respect to air quality, energy, and GHG emissions.

Proposed Site Plan

2.0 AIR POLLUTANTS

Air pollutants are generally classified as either criteria pollutants or non-criteria pollutants. Federal ambient air quality standards have been established for criteria pollutants, whereas no ambient standards have been established for non-criteria pollutants. For some criteria pollutants, separate standards have been set for different periods. Most standards have been set to protect public health. For some pollutants, standards have been based on other values (such as protection of crops, protection of materials, or avoidance of nuisance conditions). A summary of federal and state ambient air quality standards is provided in the Regulatory Framework section.

2.1 Criteria Pollutants and Ozone Precursors

The criteria pollutants consist of: ozone, nitrogen oxides (NOx), CO, sulfur oxides (SOx), lead, and particulate matter (PM). The ozone precursors consist of NOx and VOC. These pollutants can harm your health and the environment, and cause property damage. The Environmental Protection Agency (EPA) calls these pollutants "criteria" air pollutants because it regulates them by developing human health-based and/or environmentally-based criteria for setting permissible levels. The following provides descriptions of each of the criteria pollutants and ozone precursors.

Nitrogen Oxides

NOx is the generic term for a group of highly reactive gases which contain nitrogen and oxygen. While most NOx are colorless and odorless, concentrations of NO_2 can often be seen as a reddish-brown layer over many urban areas. NOx form when fuel is burned at high temperatures, as in a combustion process. The primary manmade sources of NOx are motor vehicles, electric utilities, and other industrial, commercial, and residential sources that burn fuel. NOx reacts with other pollutants to form, ground-level ozone, nitrate particles, acid aerosols, as well as NO_2, which cause respiratory problems. NOx and the pollutants formed from NOx can be transported over long distances, following the patterns of prevailing winds. Therefore, controlling NOx is often most effective if done from a regional perspective, rather than focusing on the nearest sources.

Ozone

Ozone is not usually emitted directly into the air but in the vicinity of ground-level is created by a chemical reaction between NOx and VOC in the presence of sunlight. Motor vehicle exhaust, industrial emissions, gasoline vapors, chemical solvents as well as natural sources emit NOx and VOC that help form ozone. Ground-level ozone is the primary constituent of smog. Sunlight and hot weather cause ground-level ozone to form with the greatest concentrations usually occurring downwind from urban areas. Ozone is subsequently considered a regional pollutant. Ground-level ozone is a respiratory irritant and an oxidant that increases susceptibility to respiratory infections and can cause substantial damage to vegetation and other materials. Because NOx and VOC are ozone precursors, the health effects associated with ozone are also indirect health effects associated with significant levels of NOx and VOC emissions.

Carbon Monoxide

CO is a colorless, odorless gas that is formed when carbon in fuel is not burned completely. It is a component of motor vehicle exhaust, which contributes approximately 56 percent of all CO emissions nationwide. In cities, 85 to 95 percent of all CO emissions may come from motor vehicle exhaust. Other sources of CO emissions include industrial processes (such as metals processing and chemical manufacturing), residential wood burning, and natural sources such as forest fires. Woodstoves, gas

stoves, cigarette smoke, and unvented gas and kerosene space heaters are indoor sources of CO. The highest levels of CO in the outside air typically occur during the colder months of the year when inversion conditions are more frequent. The air pollution becomes trapped near the ground beneath a layer of warm air. CO is described as having only a local influence because it dissipates quickly. Since CO concentrations are strongly associated with motor vehicle emissions, high CO concentrations generally occur in the immediate vicinity of roadways with high traffic volumes and traffic congestion, active parking lots, and in automobile tunnels. Areas adjacent to heavily traveled and congested intersections are particularly susceptible to high CO concentrations.

CO is a public health concern because it combines readily with hemoglobin and thus reduces the amount of oxygen transported in the bloodstream. The health threat from lower levels of CO is most serious for those who suffer from heart disease such as angina, clogged arteries, or congestive heart failure. For a person with heart disease, a single exposure to CO at low levels may cause chest pain and reduce that person's ability to exercise; repeated exposures may contribute to other cardiovascular effects. High levels of CO can affect even healthy people. People who breathe high levels of CO can develop vision problems, reduced ability to work or learn, reduced manual dexterity, and difficulty performing complex tasks. At extremely high levels, CO is poisonous and can cause death.

Sulfur Oxides

SOx gases are formed when fuel containing sulfur, such as coal and oil is burned, as well as from the refining of gasoline. SOx dissolves easily in water vapor to form acid and interacts with other gases and particles in the air to form sulfates and other products that can be harmful to people and the environment.

Lead

Lead is a metal found naturally in the environment as well as manufactured products. The major sources of lead emissions have historically been motor vehicles and industrial sources. Due to the phase out of leaded gasoline, metal processing is now the primary source of lead emissions to the air. High levels of lead in the air are typically only found near lead smelters, waste incinerators, utilities, and lead-acid battery manufacturers. Exposure of fetuses, infants and children to low levels of lead can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased lead levels are associated with increased blood pressure.

Particulate Matter

PM is the term for a mixture of solid particles and liquid droplets found in the air. PM is made up of a number of components including acids (such as nitrates and sulfates), organic chemicals, metals, and soil or dust particles. The size of particles is directly linked to their potential for causing health problems. Particles that are less than 10 micrometers in diameter (PM10) that are also known as *Respirable Particulate Matter* are the particles that generally pass through the throat and nose and enter the lungs. Once inhaled, these particles can affect the heart and lungs and cause serious health effects. Particles that are less than 2.5 micrometers in diameter (PM2.5) that are also known as *Fine Particulate Matter* have been designated as a subset of PM10 due to their increased negative health impacts and its ability to remain suspended in the air longer and travel further.

Volatile Organic Compounds

Hydrocarbons are organic gases that are formed from hydrogen and carbon and sometimes other elements. Hydrocarbons that contribute to formation of O_3 are referred to and regulated as VOCs (also

referred to as reactive organic gases [ROG]). Combustion engine exhaust, oil refineries, and fossil-fueled power plants are the sources of hydrocarbons. Other sources of hydrocarbons include evaporation from petroleum fuels, solvents, dry cleaning solutions, and paint.

VOC is not classified as a criteria pollutant, since VOCs by themselves are not a known source of adverse health effects. The primary health effects of VOCs result from the formation of ozone and its related health effects. High levels of VOCs in the atmosphere can interfere with oxygen intake by reducing the amount of available oxygen through displacement. Carcinogenic forms of hydrocarbons, such as benzene, are considered toxic air contaminants (TACs). There are no separate health standards for VOCs as a group.

2.2 Other Pollutants of Concern

Toxic Air Contaminants

In addition to the above-listed criteria pollutants, TACs are another group of pollutants of concern. Under separate cover, we have prepared a health risk assessment, analyzing the potential health risks from nearby diesel emissions to the future residents that would live at the Project. TACs is a term that is defined under the California Clean Air Act and consists of the same substances that are defined as Hazardous Air Pollutants (HAPs) in the Federal Clean Air Act. There are over 700 hundred different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Cars and trucks release at least 40 different toxic air contaminants. The most important of these TACs, in terms of health risk, are diesel particulates, benzene, formaldehyde, 1,3-butadiene, and acetaldehyde. Public exposure to TACs can result from emissions from normal operations as well as from accidental releases. Health effects of TACs include cancer, birth defects, neurological damage, and death.

TACs are less pervasive in the urban atmosphere than criteria air pollutants, however they are linked to short-term (acute) or long-term (chronic or carcinogenic) adverse human health effects. There are hundreds of different types of TACs with varying degrees of toxicity. Sources of TACs include industrial processes, commercial operations (e.g., gasoline stations and dry cleaners), and motor vehicle exhaust.

According to *The California Almanac of Emissions and Air Quality 2013 Edition*, the majority of the estimated health risk from TACs can be attributed to relatively few compounds, the most important of which is DPM. DPM is a subset of PM2.5 because the size of diesel particles are typically 2.5 microns and smaller. The identification of DPM as a TAC in 1998 led the CARB to adopt the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-fueled Engines and Vehicles in September 2000. The plan's goals are a 75-percent reduction in DPM by 2010 and an 85-percent reduction by 2020 from the 2000 baseline. Diesel engines emit a complex mixture of air pollutants, composed of gaseous and solid material. The visible emissions in diesel exhaust are known as particulate matter or PM, which includes carbon particles or "soot." Diesel exhaust also contains a variety of harmful gases and over 40 other cancer-causing substances. California's identification of DPM as a toxic air contaminant was based on its potential to cause cancer, premature deaths, and other health problems. Exposure to DPM is a health hazard, particularly to children whose lungs are still developing and the elderly who may have other serious health problems. Overall, diesel engine emissions are responsible for the majority of California's potential airborne cancer risk from combustion sources.

Asbestos

Asbestos is listed as a TAC by CARB and as a HAP by the EPA. Asbestos occurs naturally in mineral formations and crushing or breaking these rocks, through construction or other means, can release asbestiform fibers into the air. Asbestos emissions can result from the sale or use of asbestos-containing materials, road surfacing with such materials, grading activities, and surface mining. The risk of disease is dependent upon the intensity and duration of exposure. When inhaled, asbestos fibers may remain in the lungs and with time may be linked to such diseases as asbestosis, lung cancer, and mesothelioma. The nearest likely locations of naturally occurring asbestos, as identified in the *General Location Guide for Ultramafic Rocks in California*, prepared by the California Division of Mines and Geology, is located in Santa Barbara County. The nearest historic asbestos mine to the project site, as identified in the *Reported Historic Asbestos Mines, Historic Asbestos Prospects, and Other Natural Occurrences of Asbestos in California,* prepared by U.S. Geological Survey, is located at Asbestos Mountain, which is approximately 110 miles east of the project site in the San Jacinto Mountains. Due to the distance to the nearest natural occurrences of asbestos, the project site is not likely to contain asbestos.

In addition to naturally occurring asbestos, asbestos was used extensively in building construction from the early 1940s through the 1970s as highly-effective and inexpensive fire-retardant material and thermal and acoustic insulator. Asbestos is most commonly found as thermal insulation on pipes, but also may be found in certain types of floor and ceiling tiles. There are two types of asbestos: “friable” and "non-friable.” Friable asbestos generally contains more than 1 percent asbestos by weight or area, and can be crumbled, pulverized, or reduced to powder by the pressure of an ordinary human hand, which releases fibers. Non friable asbestos generally contains more than 1 percent asbestos but cannot be pulverized under hand pressure and generally does not release asbestos fibers. It should be noted that the existing buildings on the project site were constructed between 1986 and 1987, when no asbestos was allowed in building materials.

3.0 GREENHOUSE GASES

3.1 Greenhouse Gases

Constituent gases of the Earth's atmosphere, called atmospheric greenhouse gases (GHGs), play a critical role in the Earth's radiation amount by trapping infrared radiation from the Earth's surface, which otherwise would have escaped to space. Prominent greenhouse gases contributing to this process include carbon dioxide (CO_2), methane (CH_4), ozone, water vapor, nitrous oxide (N_2O), and chlorofluorocarbons (CFCs). This phenomenon, known as the Greenhouse Effect, is responsible for maintaining a habitable climate. Anthropogenic (caused or produced by humans) emissions of these greenhouse gases in excess of natural ambient concentrations are responsible for the enhancement of the Greenhouse Effect and have led to a trend of unnatural warming of the Earth's natural climate, known as global warming or climate change. Emissions of gases that induce global warming are attributable to human activities associated with industrial/manufacturing, agriculture, utilities, transportation, and residential land uses. Emissions of CO_2 and N_2O are byproducts of fossil fuel combustion. Methane, a potent greenhouse gas, results from off-gassing associated with agricultural practices and landfills. Sinks of CO_2, where CO_2 is stored outside of the atmosphere, include uptake by vegetation and dissolution into the ocean. The following provides a description of each of the greenhouse gases and their global warming potential.

Water Vapor

Water vapor is the most abundant, important, and variable GHG in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. The feedback loop in which water is involved is critically important to projecting future climate change. As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to "hold" more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive feedback loop will continue is unknown as there is also dynamics that put the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it will eventually also condense into clouds, which are more able to reflect incoming solar radiation (thus allowing less energy to reach the Earth's surface and heat it up).

Carbon Dioxide

The natural production and absorption of CO_2 is achieved through the terrestrial biosphere and the ocean. However, humankind has altered the natural carbon cycle by burning coal, oil, natural gas, and wood. Since the industrial revolution began in the mid 1700s, each of these activities has increased in scale and distribution. CO_2 was the first GHG demonstrated to be increasing in atmospheric concentration with the first conclusive measurements being made in the last half of the 20th century. Prior to the industrial revolution, concentrations were fairly stable at 280 parts per million (ppm). The International Panel on Climate Change (IPCC) indicates that concentrations were 379 ppm in 2005, an increase of more than 30 percent. Left unchecked, the IPCC projects that concentration of carbon dioxide in the atmosphere is projected to increase to a minimum of 540 ppm by 2100 as a direct result of anthropogenic sources. This

could result in an average global temperature rise of at least two degrees Celsius or 3.6 degrees Fahrenheit.

Methane

CH_4 is an extremely effective absorber of radiation, although its atmospheric concentration is less than that of CO_2. Its lifetime in the atmosphere is brief (10 to 12 years), compared to some other GHGs (such as CO_2, N_2O, and CFCs). CH_4 has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropocentric sources include fossil-fuel combustion and biomass burning.

Nitrous Oxide

Concentrations of N_2O also began to rise at the beginning of the industrial revolution. In 1998, the global concentration of this GHG was documented at 314 parts per billion (ppb). N_2O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. N_2O is also commonly used as an aerosol spray propellant (i.e., in whipped cream bottles, in potato chip bags to keep chips fresh, and in rocket engines and race cars).

Chlorofluorocarbons

CFCs are gases formed synthetically by replacing all hydrogen atoms in methane or ethane (C_2H_6) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the Earth's surface). CFCs have no natural source, but were first synthesized in 1928. They were used for refrigerants, aerosol propellants, and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and in 1989 the European Community agreed to ban CFCs by 2000 and subsequent treaties banned CFCs worldwide by 2010. This effort was extremely successful, and the levels of the major CFCs are now remaining level or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years.

Hydrofluorocarbons

HFCs are synthetic man-made chemicals that are used as a substitute for CFCs. Out of all the GHGs, they are one of three groups with the highest global warming potential. The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF_3), HFC-134a (CF_3CH_2F), and HFC-152a (CH_3CHF_2). Prior to 1990, the only significant emissions were HFC-23. HFC-134a use is increasing due to its use as a refrigerant. Concentrations of HFC-23 and HFC-134a in the atmosphere are now about 10 parts per trillion (ppt) each. Concentrations of HFC-152a are about 1 ppt. HFCs are manmade for applications such as automobile air conditioners and refrigerants.

Perfluorocarbons

Perfluorocarbons (PFCs) have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. High-energy ultraviolet rays about 60 kilometers above Earth's surface are able to destroy the compounds. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF_4) and hexafluoroethane (C_2F_6).

Concentrations of CF_4 in the atmosphere are over 70 ppt. The two main sources of PFCs are primary aluminum production and semiconductor manufacturing.

Sulfur Hexafluoride

Sulfur Hexafluoride (SF_6) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. SF_6 has the highest global warming potential of any gas evaluated; 23,900 times that of CO_2. Concentrations in the 1990s were about 4 ppt. Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

Aerosols

Aerosols are particles emitted into the air through burning biomass (plant material) and fossil fuels. Aerosols can warm the atmosphere by absorbing and emitting heat and can cool the atmosphere by reflecting light. Cloud formation can also be affected by aerosols. Sulfate aerosols are emitted when fuel containing sulfur is burned. Black carbon (or soot) is emitted during biomass burning due to the incomplete combustion of fossil fuels. Particulate matter regulation has been lowering aerosol concentrations in the United States; however, global concentrations are likely increasing.

3.2 Global Warming Potential

GHGs have varying global warming potential (GWP). The GWP is the potential of a gas or aerosol to trap heat in the atmosphere; it is the cumulative radiative forcing effects of a gas over a specified time horizon resulting from the emission of a unit mass of gas relative to the reference gas, CO_2. The GHGs listed by the IPCC and the CEQA Guidelines are discussed in this section in order of abundance in the atmosphere. Water vapor, the most abundant GHG, is not included in this list because its natural concentrations and fluctuations far outweigh its anthropogenic (human-made) sources. To simplify reporting and analysis, GHGs are commonly defined in terms of their GWP. The IPCC defines the GWP of various GHG emissions on a normalized scale that recasts all GHG emissions in terms of CO_2e. As such, the GWP of CO_2 is equal to 1. The GWP values used in this analysis are based on the 2007 IPCC Fourth Assessment Report, which are used in CARB's 2014 Scoping Plan Update and the CalEEMod Model Version 2020.4.0 and are detailed in Table A. The IPCC has updated the Global Warming Potentials of some gases in their Fifth Assessment Report, however the new values have not yet been incorporated into the CalEEMod model that has been utilized in this analysis.

Table A – Global Warming Potentials, Atmospheric Lifetimes and Abundances of GHGs

Gas	Atmospheric Lifetime (years)[1]	Global Warming Potential (100 Year Horizon)[2]	Atmospheric Abundance
Carbon Dioxide (CO_2)	50-200	1	379 ppm
Methane (CH_4)	9-15	25	1,774 ppb
Nitrous Oxide (N_2O)	114	298	319 ppb
HFC-23	270	14,800	18 ppt
HFC-134a	14	1,430	35 ppt
HFC-152a	1.4	124	3.9 ppt
PFC: Tetrafluoromethane (CF_4)	50,000	7,390	74 ppt
PFC: Hexafluoroethane (C_2F_6)	10,000	12,200	2.9 ppt
Sulfur Hexafluoride (SF_6)	3,200	22,800	5.6 ppt

Notes:

[1] Defined as the half-life of the gas.
[2] Compared to the same quantity of CO_2 emissions and is based on the Intergovernmental Panel On Climate Change (IPCC) 2007 standard, which is utilized in CalEEMod (Version 2020.4.0),that is used in this report (CalEEMod User Guide, 2021).
Definitions: ppm = parts per million; ppb = parts per billion; ppt = parts per trillion
Source: IPCC 2007, EPA 2015

3.3 Greenhouse Gas Emissions Inventory

According to https://cdiac.ess-dive.lbl.gov/trends/emis/tre_glob_2014.html 9,855 million metric tons (MMT) of CO_2 equivalent (CO_2e) emissions were created globally in the year 2014. According to https://www.epa.gov/ghgemissions/global-greenhouse-gas-emissions-data the breakdown of global GHG emissions by sector consists of: 25 percent from electricity and heat production; 21 percent from industry; 24 percent from agriculture, forestry and other land use activities; 14 percent from transportation; 6 percent from building energy use; and 10 percent from all other sources of energy use.

According to *Inventory of U.S. Greenhouse Gas Emissions and Sinks 1990-2019,* prepared by EPA, in 2019 total U.S. GHG emissions were 6,558 million metric tons (MMT) of CO_2e emissions. Total U.S. emissions have increased by 4 percent between 1990 and 2016 and GHG emissions decreased by 13 percent between 2005 and 2019. The recent decrease in GHG emissions was a result of multiple factors, including population, economic growth, energy markets, and technological changes the include energy efficiency and energy fuel choices. Between 2018 and 2019, GHG emissions decreased by almost 2 percent due to multiple factors, including a one percent decrease in total energy use.

According to *California Greenhouse Gas Emissions for 2000 to 2019 Trends of Emissions and Other Indicators*, prepared by CARB, July 28, 2021, the State of California created 418.2 million metric tons of carbon dioxide equivalent ($MMTCO_2e$) in 2019. The 2019 emissions were 7.2 $MMTCO_2e$ lower than 2018 levels and almost 13 $MMTCO_2e$ below the State adopted year 2020 GHG limit of 431 $MMTCO_2e$. The breakdown of California GHG emissions by sector consists of: 39.7 percent from transportation; 21.1 percent from industrial; 14.1 percent from electricity generation; 7.6 percent from agriculture; 10.5 percent from residential and commercial buildings; 4.9 percent from high global warming potential sources, and 2.1 percent from waste.

4.0 AIR QUALITY MANAGEMENT

The air quality at the project site is addressed through the efforts of various international, federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to improve air quality through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for improving the air quality are discussed below.

4.1 Federal – United States Environmental Protection Agency

The Clean Air Act, first passed in 1963 with major amendments in 1970, 1977 and 1990, is the overarching legislation covering regulation of air pollution in the United States. The Clean Air Act has established the mandate for requiring regulation of both mobile and stationary sources of air pollution at the state and federal level. The Environmental Protection Agency (EPA) was created in 1970 in order to consolidate research, monitoring, standard-setting and enforcement authority into a single agency.

The EPA is responsible for setting and enforcing the National Ambient Air Quality Standards (NAAQS) for atmospheric pollutants. It regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain locomotives. NAAQS pollutants were identified using medical evidence and are shown below in Table B.

Table B – State and Federal Criteria Pollutant Standards

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Ozone (O_3)	0.09 ppm / 1-hour 0.07 ppm / 8-hour	0.070 ppm, / 8-hour	(a) Pulmonary function decrements and localized lung edema in humans and animals; (b) Risk to public health implied by alterations in pulmonary morphology and host defense in animals; (c) Increased mortality risk; (d) Risk to public health implied by altered connective tissue metabolism and altered pulmonary morphology in animals after long-term exposures and pulmonary function decrements in chronically exposed humans; (e) Vegetation damage; and (f) Property damage.
Carbon Monoxide (CO)	20.0 ppm / 1-hour 9.0 ppm / 8-hour	35.0 ppm / 1-hour 9.0 ppm / 8-hour	(a) Aggravation of angina pectoris and other aspects of coronary heart disease; (b) Decreased exercise tolerance in persons with peripheral vascular disease and lung disease; (c) Impairment of central nervous system functions; and (d) Possible increased risk to fetuses.
Nitrogen Dioxide (NO_2)	0.18 ppm / 1-hour 0.030 ppm / annual	100 ppb / 1-hour 0.053 ppm / annual	(a) Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups; (b) Risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes; and (c) Contribution to atmospheric discoloration.
Sulfur Dioxide (SO_2)	0.25 ppm / 1-hour 0.04 ppm / 24-hour	75 ppb / 1-hour 0.14 ppm/annual	(a) Bronchoconstriction accompanied by symptoms which may include wheezing, shortness of breath and chest tightness, during exercise or physical activity in persons with asthma.
Suspended Particulate Matter (PM_{10})	50 µg/m^3 / 24-hour 20 µg/m^3 / annual	150 µg/m^3 / 24-hour	(a) Exacerbation of symptoms in sensitive patients with respiratory or cardiovascular disease; (b) Declines in pulmonary function growth in children; and (c) Increased risk of premature death from heart or lung diseases in elderly.

Air Pollutant	Concentration / Averaging Time		Most Relevant Effects
	California Standards	Federal Primary Standards	
Suspended Particulate Matter ($PM_{2.5}$)	12 µg/m^3 / annual	35 µg/m^3 / 24-hour 12 µg/m^3 / annual	
Sulfates	25 µg/m^3 / 24-hour	No Federal Standards	(a) Decrease in ventilatory function; (b) Aggravation of asthmatic symptoms; (c) Aggravation of cardio-pulmonary disease; (d) Vegetation damage; (e) Degradation of visibility; and (f) Property damage.
Lead	1.5 µg/m^3 / 30-day	0.15 µg/m^3 /3-month rolling	(a) Learning disabilities; and (b) Impairment of blood formation and nerve conduction.
Visibility Reducing Particles	Extinction coefficient of 0.23 per kilometer - visibility of ten miles or more due to particles when relative humidity is less than 70 percent.	No Federal Standards	Visibility impairment on days when relative humidity is less than 70 percent.

Source: http://www.arb.ca.gov/research/aaqs/aaqs2.pdf .

As part of its enforcement responsibilities, the EPA requires each state with federal nonattainment areas to prepare and submit a State Implementation Plan (SIP) that demonstrates the means to attain the national standards. The SIP must integrate federal, state, and local components and regulations to identify specific measures to reduce pollution, using a combination of performance standards and market-based programs within the timeframe identified in the SIP. The CARB defines attainment as the category given to an area with no violations in the past three years. As indicated below in Table C, the Air Basin has been designated by EPA for the national standards as a non-attainment area for ozone and PM2.5 and partial non-attainment for lead. Currently, the Air Basin is in attainment with the national ambient air quality standards for CO, PM10, SO_2, and NO_2.

Table C – South Coast Air Basin Attainment Status

Criteria Pollutant	Standard	Averaging Time	Designation	Attainment Date
1-Hour Ozone	NAAQS	1979 1-Hour (0.12 ppm)	Nonattainment (Extreme)	2/6/2023 (revised deadline)
	CAAQS	1-Hour (0.09 ppm)	Nonattainment	N/A
8-Hour Ozone	NAAQS	1997 8-Hour (0.08 ppm)	Nonattainment (Extreme)	6/15/2024
	NAAQS	2008 8-Hour (0.075 ppm)	Nonattainment (Extreme)	7/20/2032
	NAAQS	2015 8-Hour (0.070 ppm)	Nonattainment (Extreme)	8/3/2038
	CAAQS	8-Hour (0.070 ppm)	Nonattainment	Beyond 2032
CO	NAAQS	1-Hour (35 ppm) 8-Hour (9 ppm)	Attainment (Maintenance)	6/11/2007 (attained)
	CAAQS	1-Hour (20 ppm) 8-Hour (9 ppm)	Attainment	6/11/2007 (attained)
NO_2	NAAQS	2010 1-Hour (0.10 ppm)	Unclassifiable/ Attainment	N/A (attained)

Criteria Pollutant	Standard	Averaging Time	Designation	Attainment Date
	NAAQS	1971 Annual (0.053 ppm)	Attainment (Maintenance)	9/22/1998 (attained)
	CAAQS	1-Hour (0.18 ppm) Annual (0.030 ppm)	Attainment	---
SO_2	NAAQS	1-Hour (75 ppb)	Designations Pending (expect Unclassifiable/ Attainment)	N/A (attained)
	NAAQS	24-Hour (0.14 ppm) Annual (0.03 ppm)	Unclassifiable/ Attainment	3/19/1979 (attained)
PM10	NAAQS	1987 24-hour (150 µg/m^3)	Attainment (Maintenance)	7/26/2013 (attained)
	CAAQS	24-hour (50 µg/m^3) Annual (20 µg/m^3)	Nonattainment	N/A
PM2.5	NAAQS	2006 24-Hour (35 µg/m^3)	Nonattainment (Serious)	12/31/2019
	NAAQS	1997 Annual (15.0 µg/m^3)	Attainment	8/24/2016
	NAAQS	2012 Annual (12.0 µg/m^3)	Nonattainment (Serious)	12/31/2025
	CAAQS	Annual (12.0 µg/m^3)	Nonattainment	N/A
Lead	NAAQS	3-Months Rolling (0.15 µg/m^3)	Nonattainment (Partial)	12/31/2015
Hydrogen Sulfide (H_2S)	CAAQS	1-Hour (0.03 ppm or 42 µg/m^3)	Attainment	---
Sulfates	CAAQS	24-Hour (25 µg/m^3)	Attainment	---
Vinyl Chloride	CAAQS	24-Hour (0.01 ppm or 26 µg/m^3)	Attainment	---

Source: SCAQMD (http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/naaqs-caaqs-feb2016.pdf?sfvrsn=14)

In 2015, one or more stations in the Air Basin exceeded the most current federal standards on a total of 146 days (40 percent of the year), including: 8-hour ozone (113 days over 2015 ozone NAAQS), 24-hour PM2.5 (30 days, including near-road sites; 25 days for ambient sites only), PM10 (2 days), and NO_2 (1 day). Despite substantial improvement in air quality over the past few decades, some air monitoring stations in the Air Basin still exceed the NAAQS for ozone more frequently than any other area in the United States. Seven of the top 10 stations in the nation most frequently exceeding the 2015 8-hour ozone NAAQS in 2015 were located within the Air Basin, including stations in San Bernardino, Riverside, and Los Angeles Counties (SCAQMD, 2016).

PM2.5 levels in the Air Basin have improved significantly in recent years. By 2013 and again in 2014 and 2015, there were no stations measuring PM2.5 in the Air Basin that violated the former 1997 annual PM2.5 NAAQS (15.0 µg/m^3) for the 3-year design value period. On July 25, 2016 the EPA finalized a determination that the Basin attained the 1997 annual (15.0 µg/m^3) and 24-hour PM2.5 (65 µg/m^3) NAAQS, effective August 24, 2016. Of the 17 federal PM2.5 monitors at ambient stations in the Air Basin for the 2013-2015 period, five stations had design values over the current 2012 annual PM2.5 NAAQS (12.0 µg/m^3), including: Mira Loma (Air Basin maximum at 14.1 µg/m^3), Rubidoux, Fontana, Ontario, Central Los Angeles, and Compton. For the 24-hour PM2.5 NAAQS (35.0 µg/m^3) there were 14 stations in the Air Basin in 2015 that had one or more daily exceedances of the standard, with a combined total of 25 days over that standard in the Air Basin. While it was previously anticipated that the Air Basin's 24-hour PM2.5 NAAQS would be attained by 2015, this did not occur based on the data for 2013 through

2015. The higher number of days exceeding the 24-hour PM2.5 NAAQS over what was expected is largely attributed to the severe drought conditions over this period that allowed for more stagnant conditions in the Air Basin with multi-day buildups of higher PM2.5 concentrations. This was caused by the lack of storm-related dispersion and rain-out of PM and its precursors (SCAQMD, 2016).

The Air Basin is currently in attainment for the federal standards for SO_2, CO, NO_2, and PM10. While the concentration level of the 1-hour NO_2 federal standard (100 ppb) was exceeded in the Air Basin for one day in 2015 (Long Beach- Hudson Station), the NAAQS NO_2 design value has not been exceeded. Therefore, the Air Basin remains in attainment of the NO_2 NAAQS (SCAQMD, 2016).

4.2 State – California Air Resources Board

The California Air Resources Board (CARB), which is a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets the California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. The CAAQS for criteria pollutants are shown above in Table B. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

The Air Basin has been designated by the CARB as a non-attainment area for ozone, PM10 and PM2.5. Currently, the Air Basin is in attainment with the ambient air quality standards for CO, NO_2, SO_2, lead, and sulfates and is unclassified for visibility reducing particles and Hydrogen Sulfide.

The following lists the State of California Code of Regulations (CCR) air quality emission rules that are applicable, but not limited to all school projects in the State.

Assembly Bill 2588

The Air Toxics "Hot Spots" Information and Assessment Act (Assembly Bill [AB] 2588, 1987, Connelly) was enacted in 1987 as a means to establish a formal air toxics emission inventory risk quantification program. AB 2588, as amended, establishes a process that requires stationary sources to report the type and quantities of certain substances their facilities routinely release in California. The data is ranked by high, intermediate, and low categories, which are determined by: the potency, toxicity, quantity, volume, and proximity of the facility to nearby receptors.

CARB Regulation for In-Use Off-Road Diesel Vehicles

On July 26, 2007, the California Air Resources Board (CARB) adopted California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 to reduce diesel particulate matter (DPM) and NOx emissions from in-use off-road heavy-duty diesel vehicles in California. Such vehicles are used in construction, mining, and industrial operations. The regulation limits idling to no more than five consecutive minutes, requires reporting and labeling, and requires disclosure of the regulation upon vehicle sale. Performance requirements of the rule are based on a fleet's average NOx emissions, which can be met by replacing older vehicles with newer, cleaner vehicles or by applying exhaust retrofits. The regulation was amended in 2010 to delay the original timeline of the performance requirement making the first compliance deadline January 1, 2014 for large fleets (over 5,000 horsepower), 2017 for medium fleets (2,501-5,000 horsepower), and 2019 for small fleets (2,500 horsepower or less). Currently, no commercial operation in California may add any equipment to their fleet that has a Tier 0 or Tier 1 engine. By January 1, 2018

medium and large fleets will be restricted from adding Tier 2 engines to their fleets and by January 2023, no commercial operation will be allowed to add Tier 2 engines to their fleets. It should be noted that commercial fleets may continue to use their existing Tier 0 and 1 equipment, if they can demonstrate that the average emissions from their entire fleet emissions meet the NOx emissions targets.

CARB Resolution 08-43 for On-Road Diesel Truck Fleets

On December 12, 2008 the CARB adopted Resolution 08-43, which limits NOx, PM10 and PM2.5 emissions from on-road diesel truck fleets that operate in California. On October 12, 2009 Executive Order R-09-010 was adopted that codified Resolution 08-43 into Section 2025, title 13 of the California Code of Regulations. This regulation requires that by the year 2023 all commercial diesel trucks that operate in California shall meet model year 2010 (Tier 4 Final) or latter emission standards. In the interim period, this regulation provides annual interim targets for fleet owners to meet. By January 1, 2020, 90 percent of a truck fleet is required to have installed Best Available Control Technology (BACT) for NOx emissions and 100 percent of a truck fleet installed BACT for PM10 emissions. This regulation also provides a few exemptions including a onetime per year 3-day pass for trucks registered outside of California and a low use exemption for trucks that operate less than 1,000 miles per year or less than 100 hours, if the truck operates in a stationary mode. Starting January 1, 2020 the DMV will no longer register any vehicles that do not meet the Section 2025, title 13 requirements. All on-road diesel trucks utilized during construction of the proposed project will be required to comply with Resolution 08-43.

4.3 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin. To that end, as a regional agency, the SCAQMD works directly with the Southern California Association of Governments (SCAG), county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. It has responded to this requirement by preparing a sequence of AQMPs. The *Final 2016 Air Quality Management Plan* (2016 AQMP) was adopted by the SCAQMD Board on March 3, 2016 and was adopted by CARB on March 23, 2017 for inclusion into the California State Implementation Plan (SIP). The 2016 AQMP was prepared in order to meet the following standards:

- 8-hour Ozone (75 ppb) by 2032
- Annual PM2.5 (12 µg/m3) by 2021-2025
- 8-hour Ozone (80 ppb) by 2024 (updated from the 2007 and 2012 AQMPs)
- 1-hour Ozone (120 ppb) by 2023 (updated from the 2012 AQMP)
- 24-hour PM2.5 (35 µg/m^3) by 2019 (updated from the 2012 AQMP)

In addition to meeting the above standards, the 2016 AQMP also includes revisions to the attainment demonstrations for the 1997 8-hour ozone NAAQS and the 1979 1-hour ozone NAAQS. The prior 2012 AQMP was prepared in order to demonstrate attainment with the 24-hour PM2.5 standard by 2014 through adoption of all feasible measures. The prior 2007 AQMP demonstrated attainment with the 1997

8-hour ozone (80 ppb) standard by 2023, through implementation of future improvements in control techniques and technologies. These "black box" emissions reductions represent 65 percent of the remaining NOx emission reductions by 2023 in order to show attainment with the 1997 8-hour ozone NAAQS. Given the magnitude of these needed emissions reductions, additional NOx control measures have been provided in the 2012 AQMP even though the primary purpose was to show compliance with 24-hour PM2.5 emissions standards.

The 2016 AQMP provides a new approach that focuses on available, proven and cost effective alternatives to traditional strategies, while seeking to achieve multiple goals in partnership with other entities to promote reductions in GHG emissions and TAC emissions as well as efficiencies in energy use, transportation, and goods movement. The 2016 AQMP recognizes the critical importance of working with other agencies to develop funding and other incentives that encourage the accelerated transition of vehicles, buildings and industrial facilities to cleaner technologies in a manner that benefits not only air quality, but also local businesses and the regional economy.

Although SCAQMD is responsible for regional air quality planning efforts, it does not have the authority to directly regulate air quality issues associated with plans and new development projects throughout the Air Basin. Instead, this is controlled through local jurisdictions in accordance to the California Environmental Quality Act (CEQA). In order to assist local jurisdictions with air quality compliance issues the *CEQA Air Quality Handbook* (SCAQMD CEQA Handbook), prepared by SCAQMD, 1993, with the most current updates found at http://www.aqmd.gov/ceqa/hdbk.html, was developed in accordance with the projections and programs detailed in the AQMPs. The purpose of the SCAQMD CEQA Handbook is to assist Lead Agencies, as well as consultants, project proponents, and other interested parties in evaluating a proposed project's potential air quality impacts. Specifically, the SCAQMD CEQA Handbook explains the procedures that SCAQMD recommends be followed for the environmental review process required by CEQA. The SCAQMD CEQA Handbook provides direction on how to evaluate potential air quality impacts, how to determine whether these impacts are significant, and how to mitigate these impacts. The SCAQMD intends that by providing this guidance, the air quality impacts of plans and development proposals will be analyzed accurately and consistently throughout the Air Basin, and adverse impacts will be minimized.

The following lists the SCAQMD rules that are applicable but not limited to school development projects in the Air Basin.

Rule 402 - Nuisance

Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which causes injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. Compliance with Rule 402 will reduce local air quality and odor impacts to nearby sensitive receptors.

Rule 403- Fugitive Dust

Rule 403 governs emissions of fugitive dust during construction activities and requires that no person shall cause or allow the emissions of fugitive dust such that dust remains visible in the atmosphere beyond the property line or the dust emission exceeds 20 percent opacity, if the dust is from the operation of a motorized vehicle. Compliance with this rule is achieved through application of standard Best Available

Control Measures, which include but are not limited to the measures below. Compliance with these rules would reduce local air quality impacts to nearby sensitive receptors.

- Utilize either a pad of washed gravel 50 feet long, 100 feet of paved surface, a wheel shaker, or a wheel washing device to remove material from vehicle tires and undercarriages before leaving project site.
- Do not allow any track out of material to extend more than 25 feet onto a public roadway and remove all track out at the end of each workday.
- Water all exposed areas on active sites at least three times per day and pre-water all areas prior to clearing and soil moving activities.
- Apply nontoxic chemical stabilizers according to manufacturer specifications to all construction areas that will remain inactive for 10 days or longer.
- Pre-water all material to be exported prior to loading, and either cover all loads or maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code Section 23114.
- Replant all disturbed area as soon as practical.
- Suspend all grading activities when wind speeds (including wind gusts) exceed 25 miles per hour.
- Restrict traffic speeds on all unpaved roads to 15 miles per hour or less.

Rule 445- Fireplaces

Rule 445 governs emissions from fireplaces. This rule restricts the installation of wood-burning fireplaces into any new development and only allows the installation of dedicated gaseous-fueled fireplaces or firepits.

Rules 1108 and 1108.1 – Cutback and Emulsified Asphalt

Rules 1108 and 1108.1 govern the sale, use, and manufacturing of asphalt and limits the VOC content in asphalt. This rule regulates the VOC contents of asphalt used during construction as well as any on-going maintenance during operations. Therefore, all asphalt used during construction and operation of the proposed project must comply with SCAQMD Rules 1108 and 1108.1.

Rule 1113 – Architectural Coatings

Rule 1113 governs the sale, use, and manufacturing of architectural coatings and limits the VOC content in sealers, coatings, paints and solvents. This rule regulates the VOC contents of paints available during construction. Therefore, all paints and solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1113.

Rule 1143 – Paint Thinners

Rule 1143 governs the sale, use, and manufacturing of paint thinners and multi-purpose solvents that are used in thinning of coating materials, cleaning of coating application equipment, and other solvent cleaning operations. This rule regulates the VOC content of solvents used during construction. Solvents used during construction and operation of the proposed project must comply with SCAQMD Rule 1143.

Southern California Association of Governments

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. SCAG has prepared the *2016-2040 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS), adopted April, 2016 to address GHG reduction targets for passenger vehicles and light duty truck sources, and the *2019 Federal Transportation Improvement* Program (FTIP), adopted September 2018, which addresses regional development and growth forecasts and provides an air quality conformance analysis to demonstrate compliance with federal air quality standards. Although the RTP/SCS and FTIP are primarily planning documents for future transportation projects a key component of these plans is to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service, as a way to reduce vehicular emissions. These plans form the basis for the land use and transportation components of the AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the AQMP. The RTP/SCS, FTIP, and AQMP are based on growth forecasts based on regional socio-economic modeling by SCAG and land use designations originating within the City and County General Plans.

4.4 Local – City of El Segundo

Local jurisdictions, such as the City of El Segundo, have the authority and responsibility to reduce air pollution through its police power and decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions. The City is also responsible for the implementation of transportation control measures as outlined in the AQMPs. Examples of such measures include bus turnouts, energy-efficient streetlights, and synchronized traffic signals. In accordance with CEQA requirements and the CEQA review process, the City assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

In accordance with the CEQA requirements, the City does not, however, have the expertise to develop plans, programs, procedures, and methodologies to ensure that air quality within the City and region will meet federal and state standards. Instead, the City relies on the expertise of the SCAQMD and utilizes the SCAQMD CEQA Handbook as the guidance document for the environmental review of plans and development proposals within its jurisdiction.

5.0 ENERGY CONSERVATION MANAGEMENT

The regulatory setting related to energy conservation is primarily addressed through State and City regulations, which are discussed below.

5.1 State

Energy conservation management in the State was initiated by the 1974 Warren-Alquist State Energy Resources Conservation and Development Act that created the California Energy Resource Conservation and Development Commission (currently named California Energy Commission [CEC]), which was originally tasked with certifying new electric generating plants based on the need for the plant and the suitability of the site of the plant. In 1976 the Warren-Alquist Act was expanded to include new restrictions on nuclear generating plants, that effectively resulted in a moratorium of any new nuclear generating plants in the State. The following details specific regulations adopted by the State in order to reduce the consumption of energy.

California Code of Regulations (CCR) Title 20

On November 3, 1976 the CEC adopted the *Regulations for Appliance Efficiency Standards Relating to Refrigerators, Refrigerator-Freezers and Freezers and Air Conditioners,* which were the first energy-efficiency standards for appliances. The appliance efficiency regulations have been updated several times by the Commission and the most current version is the *2016 Appliance Efficiency Regulations*, adopted January 2017 and now includes almost all types of appliances and lamps that use electricity, natural gas as well as plumbing fixtures. The authority for the CEC to control the energy-efficiency of appliances is detailed in California Code of Regulations (CCR), Title 20, Division 2, Chapter 4, Article 4, Sections 1601-1609.

California Code of Regulations (CCR) Title 24, Part 6

The CEC is also responsible for implementing the CCR Title 24, Part 6: *California's Energy Efficiency Standards for Residential and Nonresidential Buildings* (Title 24 Part 6) that were first established in 1978 in response to a legislative mandate to reduce California's energy consumption. In 2008 the State set an energy-use reduction goal of zero-net-energy use of all new homes by 2020 and the CEC was mandated to meet this goal through revisions to the Title 24, Part 6 regulations.

The Title 24 standards are updated on a three-year schedule and since 2008 the standards have been incrementally moving to the 2020 goal of the zero-net-energy use. On January 1, 2020 the 2019 standards went into effect, that have been designed so that the average new home built in California will now use zero-net-energy and that non-residential buildings will use about 30 percent less energy than the 2016 standards due mainly to lighting upgrades. The 2019 standards also encourage the use of battery storage and heat pump water heaters, require the more widespread use of LED lighting, as well as improve the building's thermal envelope through high performance attics, walls and windows. The 2019 standards also require improvements to ventilation systems by requiring highly efficient air filters to trap hazardous air particulates as well as improvements to kitchen ventilation systems.

California Code of Regulations (CCR) Title 24, Part 11

CCR Title 24, Part 11: *California Green Building Standards* (CalGreen) was developed in response to continued efforts to reduce GHG emissions associated with energy consumption. The CalGreen Building

Standards are also updated every three years and the current version is the 2019 California Green Building Standard Code that become effective on January 1, 2020.

The CALGreen Code contains requirements for construction site selection; storm water control during construction; construction waste reduction; indoor water use reduction; material selection; natural resource conservation; site irrigation conservation; and more. The code provides for design options allowing the designer to determine how best to achieve compliance for a given site or building condition. The code also requires building commissioning, which is a process for verifying that all building systems (e.g., heating and cooling equipment and lighting systems) are functioning at their maximum efficiency.

The CALGreen Code provides standards for bicycle parking, carpool/vanpool/electric vehicle spaces, light and glare reduction, grading and paving, energy efficient appliances, renewable energy, graywater systems, water efficient plumbing fixtures, recycling and recycled materials, pollutant controls (including moisture control and indoor air quality), acoustical controls, storm water management, building design, insulation, flooring, and framing, among others. Implementation of the CALGreen Code measures reduces energy consumption and vehicle trips and encourages the use of alternative-fuel vehicles, which reduces pollutant emissions.

Some of the notable changes in the 2019 CALGreen Code over the prior 2016 CALGreen Code include: an alignment of building code engineering requirements with the national standards that include anchorage requirements for solar panels, provides design requirements for buildings in tsunami zones, increases Minimum Efficiency Reporting Value (MERV) for air filters from 8 to 13, increased electric vehicle charging requirements in parking areas, and sets minimum requirements for use of shade trees.

Executive Order N-79-20

The California Governor issued Executive Order N-79-20 on September 23, 2020 that requires all new passenger cars and trucks and commercial drayage trucks sold in California to be zero-emissions by the year 2035 and all medium- heavy-duty vehicles (commercial trucks) sold in the state to be zero-emission by 2045 for all operations where feasible. Executive Order N-79-20 also requires all off-road vehicles and equipment to transition to 100 percent zero-emission equipment, where feasible by 2035.

Senate Bill 100

Senate Bill 100 (SB 100) was adopted September 2018 and requires that by December 1, 2045 that 100 percent of retail sales of electricity to be generated from renewable or zero-carbon emission sources of electricity. SB 100 supersedes the renewable energy requirements set by SB 350, SB 1078, SB 107, and SB X1-2. However, the interim renewable energy thresholds from the prior Bills of 44 percent by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030, will remain in effect.

Executive Order B-48-18 and Assembly Bill 2127

The California Governor issued Executive Order B-48-18 on January 26, 2018 that orders all state entities to work with the private sector to put at least five million zero-emission vehicles on California roads by 2030 and to install 200 hydrogen fueling stations and 250,000 electric vehicle chargers by 2025. Currently there are approximately 350,000 electric vehicles operating in California, which represents approximately 1.5 percent of the 24 million vehicles total currently operating in California. Implementation of Executive Order B-48-18 would result in approximately 20 percent of all vehicles in California to be zero emission electric vehicles. Assembly Bill 2127 (AB 2127) was codified into statute on September 13, 2018 and

requires that the California Energy Commission working with the State Air Resources Board prepare biannual assessments of the statewide electric vehicle charging infrastructure needed to support the levels of zero emission vehicle adoption required for the State to meet its goals of putting at least 5 million zero-emission vehicles on California roads by 2030.

Assembly Bill 1109

California Assembly Bill 1109 (AB 1109) was adopted October 2007, also known as the Lighting Efficiency and Toxics Reduction Act, prohibits the manufacturing of lights after January 1, 2010 that contain levels of hazardous substances prohibited by the European Union pursuant to the RoHS Directive. AB 1109 also requires reductions in energy usage for lighting and is structured to reduce lighting electrical consumption by: (1) At least 50 percent reduction from 2007 levels for indoor residential lighting; and (2) At least 25 percent reduction from 2007 levels for indoor commercial and all outdoor lighting by 2018. AB 1109 would reduce GHG emissions through reducing the amount of electricity required to be generated by fossil fuels in California.

Assembly Bill 1493

California Assembly Bill 1493 (also known as the Pavley Bill, in reference to its author Fran Pavley) was enacted on July 22, 2002 and required CARB to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. In 2004, CARB approved the "Pavley I" regulations limiting the amount of GHGs that may be released from new passenger automobiles that are being phased in between model years 2009 through 2016. These regulations will reduce GHG emissions by 30 percent from 2002 levels by 2016. In June 2009, the EPA granted California the authority to implement GHG emission reduction standards for light duty vehicles, in September 2009, amendments to the Pavley I regulations were adopted by CARB and implementation of the "Pavley I" regulations started in 2009.

The second set of regulations "Pavley II" was developed in 2010, and is being phased in between model years 2017 through 2025 with the goal of reducing GHG emissions by 45 percent by the year 2020 as compared to the 2002 fleet. The Pavley II standards were developed by linking the GHG emissions and formerly separate toxic tailpipe emissions standards previously known as the "LEV III" (third stage of the Low Emission Vehicle standards) into a single regulatory framework. The new rules reduce emissions from gasoline-powered cars as well as promote zero-emissions auto technologies such as electricity and hydrogen, and through increasing the infrastructure for fueling hydrogen vehicles. In 2009, the U.S. EPA granted California the authority to implement the GHG standards for passenger cars, pickup trucks and sport utility vehicles and these GHG emissions standards are currently being implemented nationwide.

The EPA has performed a midterm evaluation of the longer-term standards for model years 2022-2025, and based on the findings of this midterm evaluation, the EPA proposed The Safer Affordable Fuel Efficient (SAFE) Vehicles Proposed Rule for Model Years 2021-2026 that amends the corporate average fuel economy (CAFE) and GHG emissions standards for light vehicles for model years 2021 through 2026. The SAFE Vehicles Rule was published on April 30, 2020 and made effective on June 29, 2020.

5.2 Local – City of El Segundo

General Plan

The City of El Segundo General Plan 1992 (General Plan), adopted December 1, 1992, includes a Conservation Element that provides goals and policies for beach preservation, water supply, groundwater contamination, the El Segundo Blue Butterfly, and urban landscape. Although some of these policies may

be applicable to the project, the Conservation Element does not provide any goals and policies related to energy conservation within the City. As such, the General Plan is not an applicable plan with regard to energy conservation for the proposed project.

Municipal Code

On November 19, 2019, the City Council adopted Municipal Code Section 13-11-1: Adoption of California Green Building Standards Code, 2019 Edition, which requires new buildings in the City to be designed to meet the CalGreen Building Standards, that have been detailed above under the CCR Title 24 Part 11 requirements.

6.0 GLOBAL CLIMATE CHANGE MANAGEMENT

The regulatory setting related to global climate change is addressed through the efforts of various international, federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to reduce GHG emissions through legislation, regulations, planning, policy-making, education, and a variety of programs. The agencies responsible for global climate change regulations are discussed below.

6.1 International

In 1988, the United Nations established the Intergovernmental Panel on Climate Change (IPCC) to evaluate the impacts of global climate change and to develop strategies that nations could implement to curtail global climate change. In 1992, the United States joined other countries around the world in signing the United Nations' Framework Convention on Climate Change (UNFCCC) agreement with the goal of controlling GHG emissions. The parties of the UNFCCC adopted the Kyoto Protocol, which set binding GHG reduction targets for 37 industrialized countries, the objective of reducing their collective GHG emissions by five percent below 1990 levels by 2012. The Kyoto Protocol has been ratified by 182 countries, but has not been ratified by the United States. It should be noted that Japan and Canada opted out of the Kyoto Protocol and the remaining developed countries that ratified the Kyoto Protocol have not met their Kyoto targets. The Kyoto Protocol expired in 2012 and the amendment for the second commitment period from 2013 to 2020 has not yet entered into legal force. The Parties to the Kyoto Protocol negotiated the Paris Agreement in December 2015, agreeing to set a goal of limiting global warming to less than 2 degrees Celsius compared with pre-industrial levels. The Paris Agreement has been adopted by 195 nations with 147 ratifying it, including the United States by President Obama, who ratified it by Executive Order on September 3, 2016. On June 1, 2017, President Trump announced that the United States is withdrawing from the Paris Agreement and on January 21, 2021 President Biden signed an executive order rejoining the Paris Agreement.

Additionally, the Montreal Protocol was originally signed in 1987 and substantially amended in 1990 and 1992. The Montreal Protocol stipulates that the production and consumption of compounds that deplete ozone in the stratosphere—CFCs, halons, carbon tetrachloride, and methyl chloroform—were to be phased out, with the first three by the year 2000 and methyl chloroform by 2005.

6.2 Federal – United States Environmental Protection Agency

The United States Environmental Protection Agency (EPA) is responsible for implementing federal policy to address global climate change. The Federal government administers a wide array of public-private partnerships to reduce U.S. GHG intensity. These programs focus on energy efficiency, renewable energy, methane, and other non-CO_2 gases, agricultural practices and implementation of technologies to achieve GHG reductions. EPA implements several voluntary programs that substantially contribute to the reduction of GHG emissions.

In Massachusetts v. Environmental Protection Agency (Docket No. 05–1120), argued November 29, 2006 and decided April 2, 2007, the U.S. Supreme Court held that not only did the EPA have authority to regulate greenhouse gases, but the EPA's reasons for not regulating this area did not fit the statutory requirements. As such, the U.S. Supreme Court ruled that the EPA should be required to regulate CO2 and other greenhouse gases as pollutants under the federal Clean Air Act (CAA).

In response to the FY2008 Consolidations Appropriations Act (H.R. 2764; Public Law 110-161), EPA proposed a rule on March 10, 2009 that requires mandatory reporting of GHG emissions from large sources in the United States. On September 22, 2009, the Final Mandatory Reporting of GHG Rule was signed and published in the Federal Register on October 30, 2009. The rule became effective on December 29, 2009. This rule requires suppliers of fossil fuels or industrial GHGs, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of GHG emissions to submit annual reports to EPA.

On December 7, 2009, the EPA Administrator signed two distinct findings under section 202(a) of the Clean Air Act. One is an endangerment finding that finds concentrations of the six GHGs in the atmosphere threaten the public health and welfare of current and future generations. The other is a cause or contribute finding, that finds emissions from new motor vehicles and new motor vehicle engines contribute to the GHG pollution which threatens public health and welfare. These actions did not impose any requirements on industry or other entities, however, since 2009 the EPA has been providing GHG emission standards for vehicles and other stationary sources of GHG emissions that are regulated by the EPA. On September 13, 2013 the EPA Administrator signed 40 CFR Part 60, that limits emissions from new sources to 1,100 pounds of CO_2 per MWh for fossil fuel-fired utility boilers and 1,000 pounds of CO_2 per MWh for large natural gas-fired combustion units.

On August 3, 2015, the EPA announced the Clean Power Plan, emissions guidelines for U.S. states to follow in developing plans to reduce GHG emissions from existing fossil fuel-fired power plants (Federal Register Vol. 80, No. 205, October 23 2015). On October 11, 2017, the EPA issued a formal proposal to repeal the Clean Power Plan and on June 19, 2019 the EPA replaced the Clean Power Plan with the Affordable Clean Energy rule that is anticipated to lower power sector GHG emissions by 11 million tons by the year 2030.

On April 30, 2020, the EPA and the National Highway Safety Administration published the Final Rule for the *Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule for Model Years 2021-2026 Passenger Cars and Light Trucks* (SAFE Vehicles Rule). Part One of the Rule revokes California's authority to set its own GHG emissions standards and zero-emission vehicle mandates in California, which results in one emission standard to be used nationally for all passenger cars and light trucks that is set by the EPA.

6.3 State

The CARB has the primary responsible for implementing state policy to address global climate change, however there are State regulations related to global climate change that affect a variety of State agencies. CARB, which is a part of the California Environmental Protection Agency, is responsible for the coordination and administration of both the federal and state air pollution control programs within California. In this capacity, the CARB conducts research, sets California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, provides oversight of local programs, and prepares the SIP. In addition, the CARB establishes emission standards for motor vehicles sold in California, consumer products (e.g. hairspray, aerosol paints, and barbeque lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions.

In 2008, CARB approved a Climate Change Scoping Plan that proposes a "comprehensive set of actions designed to reduce overall carbon GHG emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health" (CARB 2008). The Climate Change Scoping Plan has a range of GHG reduction actions which include direct

regulations; alternative compliance mechanisms; monetary and non-monetary incentives; voluntary actions; market-based mechanisms such as a cap-and-trade system. In 2014, CARB approved the First Update to the Climate Change Scoping Plan (CARB, 2014) that identifies additional strategies moving beyond the 2020 targets to the year 2050. On December 14, 2017 CARB adopted the California's 2017 Climate Change Scoping Plan, November 2017 (CARB, 2017) that provides specific statewide policies and measures to achieve the 2030 GHG reduction target of 40 percent below 1990 levels by 2030 and the aspirational 2050 GHG reduction target of 80 percent below 1990 levels by 2050. In addition, the State has passed the following laws directing CARB to develop actions to reduce GHG emissions, which are listed below in chronological order, with the most current first.

Executive Order N-79-20

EO N-79-20 establish targets for when all new vehicles and equipment are zero-emission and is described in more detail above in Section 5.1 under Energy Conservation Management.

California Code of Regulations (CCR) Title 24, Part 6

The Title 24 Part 6 standards have been developed by the CEC primarily for energy conservation and is described in more detail above in Section 5.1 under Energy Conservation Management. It should be noted that implementation of the Title 24 Part 6 building standards would also reduce GHG emissions, since as detailed above in Section 3.3 Greenhouse Gas Emissions Inventory, energy use for residential and commercial buildings creates 9.7 percent of the GHG emissions in the State.

California Code of Regulations (CCR) Title 24, Part 11

The CalGreen Building standards have been developed by the CEC primarily for energy conservation and is described in more detail above in Section 5.1 under Energy Conservation Management. It should be noted that implementation of the CalGreen Building standards would also reduce GHG emissions, since as detailed above under Title 24, Part 6, energy usage from buildings creates 9.7 percent of GHG emissions in the State.

Senate Bill 100

SB 100 requires that by December 1, 2045 that 100 percent of retail sales of electricity to be generated from renewable or zero-carbon emission sources of electricity and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order B-48-18 and Assembly Bill 2127

Executive Order B-48-18 and AB 2127 provides measures to put at least five million zero-emission vehicles on California roads by 2030 and to install 200 hydrogen fueling stations and 250,000 electric vehicle chargers by 2025 and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order B-30-15, Senate Bill 32 and Assembly Bill 197

The California Governor issued Executive Order B-30-15 on April 29, 2015 that aims to reduce California's GHG emissions 40 percent below 1990 levels by 2030. This executive order aligns California's GHG reduction targets with those of other international governments, such as the European Union that set the same target for 2030 in October, 2014. This target will make it possible to reach the ultimate goal of reducing GHG emissions 80 percent under 1990 levels by 2050 that is based on scientifically established levels needed in the U.S.A to limit global warming below 2 degrees Celsius – the warming threshold at

which scientists say there will likely be major climate disruptions such as super droughts and rising sea levels. Assembly Bill 197 (AB 197) (September 8, 2016) and Senate Bill 32 (SB 32) (September 8, 2016) codified into statute the GHG emissions reduction targets of at least 40 percent below 1990 levels by 2030 as detailed in Executive Order B-30-15. AB 197 also requires additional GHG emissions reporting that is broken down to sub-county levels and requires CARB to consider the social costs of emissions impacting disadvantaged communities.

Executive Order B-29-15

The California Governor issued Executive Order B-29-15 on April 1, 2015 and directed the State Water Resources Control Board to impose restrictions to achieve a statewide 25% reduction in urban water usage and directed the Department of Water Resources to replace 50 million square feet of lawn with drought tolerant landscaping through an update to the State's Model Water Efficient Landscape Ordinance. The Ordinance also requires installation of more efficient irrigation systems, promotion of greywater usage and onsite stormwater capture, and limits the turf planted in new residential landscapes to 25 percent of the total area and restricts turf from being planted in median strips or in parkways unless the parkway is next to a parking strip and a flat surface is required to enter and exit vehicles. Executive Order B-29-15 would reduce GHG emissions associated with the energy used to transport and filter water.

Assembly Bill 341 and Senate Bills 939 and 1374

Senate Bill 939 (SB 939) requires that each jurisdiction in California to divert at least 50 percent of its waste away from landfills, whether through waste reduction, recycling or other means. Senate Bill 1374 (SB 1374) requires the California Integrated Waste Management Board to adopt a model ordinance by March 1, 2004 suitable for adoption by any local agency to require 50 to 75 percent diversion of construction and demolition of waste materials from landfills. Assembly Bill 341 (AB 341) was adopted in 2011 and builds upon the waste reduction measures of SB 939 and 1374, and sets a new target of a 75 percent reduction in solid waste generated by the year 2020.

Senate Bill 375

Senate Bill 375 (SB 375) was adopted September 2008 in order to support the State's climate action goals to reduce GHG emissions through coordinated regional transportation planning efforts, regional GHG emission reduction targets, and land use and housing allocation. SB 375 requires CARB to set regional targets for GHG emissions reductions from passenger vehicle use. In 2010, CARB established targets for 2020 and 2035 for each Metropolitan Planning Organizations (MPO) within the State. It was up to each MPO to adopt a sustainable communities strategy (SCS) that will prescribe land use allocation in that MPOs Regional Transportation Plan (RTP) to meet CARB's 2020 and 2035 GHG emission reduction targets. These reduction targets are required to be updated every eight years and the most current targets are detailed at: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets, which provides GHG emissions reduction targets for SCAG of 8 percent by 2020 and 19 percent by 2035.

The Connect SoCal (SCAG, 2020) provides a 2035 GHG emission reduction target of 19 percent reduction over the 2005 per capita emissions levels. The Connect SoCal include new initiatives of land use, transportation and technology to meet the 19 percent GHG emission reduction target for 2035. CARB is also charged with reviewing SCAG's RTP/SCS for consistency with its assigned targets.

City and County land use policies, including General Plans, are not required to be consistent with the RTP and associated SCS. However, new provisions of CEQA incentivize, through streamlining and other

provisions, qualified projects that are consistent with an approved SCS and categorized as "transit priority projects."

Assembly Bill 1109

AB 1109 requires reductions in energy usage for lighting and is described in more detail above in Section 5.1 under Energy Conservation Management.

Executive Order S-1-07

Executive Order S-1-07 was issued in 2007 and proclaims that the transportation sector is the main source of GHG emissions in the State, since it generates more than 40 percent of the State's GHG emissions. It establishes a goal to reduce the carbon intensity of transportation fuels sold in the State by at least ten percent by 2020. This Executive Order also directs CARB to determine whether this Low Carbon Fuel Standard (LCFS) could be adopted as a discrete early-action measure as part of the effort to meet the mandates in AB 32.

In 2009 CARB approved the proposed regulation to implement the LCFS. The standard was challenged in the courts, but has been in effect since 2011 and was re-approved by the CARB in 2015. The LCFS is anticipated to reduce GHG emissions by about 16 MMT per year by 2020. The LCFS is designed to provide a framework that uses market mechanisms to spur the steady introduction of lower carbon fuels. The framework establishes performance standards that fuel producers and importers must meet annually. Reformulated gasoline mixed with corn-derived ethanol and low-sulfur diesel fuel represent the baseline fuels. Lower carbon fuels may be ethanol, biodiesel, renewable diesel, or blends of these fuels with gasoline or diesel. Compressed natural gas and liquefied natural gas also may be low-carbon fuels. Hydrogen and electricity, when used in fuel cells or electric vehicles, are also considered as low-carbon fuels.

Senate Bill 97

Senate Bill 97 (SB 97) was adopted August 2007 and acknowledges that climate change is a prominent environmental issue that requires analysis under CEQA. SB 97 directed the Governor's Office of Planning and Research (OPR), which is part of the State Natural Resources Agency, to prepare, develop, and transmit to CARB guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions, as required by CEQA, by July 1, 2009. The Natural Resources Agency was required to certify and adopt those guidelines by January 1, 2010.

Pursuant to the requirements of SB 97 as stated above, on December 30, 2009 the Natural Resources Agency adopted amendments to the State CEQA guidelines that addresses GHG emissions. The CEQA Guidelines Amendments changed 14 sections of the CEQA Guidelines and incorporated GHG language throughout the Guidelines. However, no GHG emissions thresholds of significance were provided and no specific mitigation measures were identified. The GHG emission reduction amendments went into effect on March 18, 2010 and are summarized below:

- Climate Action Plans and other greenhouse gas reduction plans can be used to determine whether a project has significant impacts, based upon its compliance with the plan.
- Local governments are encouraged to quantify the GHG emissions of proposed projects, noting that they have the freedom to select the models and methodologies that best meet their needs and circumstances. The section also recommends consideration of several qualitative factors that may be used in the determination of significance, such as the extent to which the given project

complies with state, regional, or local GHG reduction plans and policies. OPR does not set or dictate specific thresholds of significance. Consistent with existing CEQA Guidelines, OPR encourages local governments to develop and publish their own thresholds of significance for GHG impacts assessment.

- When creating their own thresholds of significance, local governments may consider the thresholds of significance adopted or recommended by other public agencies, or recommended by experts.
- New amendments include guidelines for determining methods to mitigate the effects of GHG emissions in Appendix F of the CEQA Guidelines.
- OPR is clear to state that "to qualify as mitigation, specific measures from an existing plan must be identified and incorporated into the project; general compliance with a plan, by itself, is not mitigation."
- OPR's emphasizes the advantages of analyzing GHG impacts on an institutional, programmatic level. OPR therefore approves tiering of environmental analyses and highlights some benefits of such an approach.
- Environmental impact reports must specifically consider a project's energy use and energy efficiency potential.

Assembly Bill 32

In 2006, the California State Legislature adopted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires CARB, to adopt rules and regulations that would achieve GHG emissions equivalent to statewide levels in 1990 by 2020 through an enforceable statewide emission cap which will be phased in starting in 2012. Emission reductions shall include carbon sequestration projects that would remove carbon from the atmosphere and utilize best management practices that are technologically feasible and cost effective.

In 2007 CARB released the calculated Year 1990 GHG emissions of 431 million metric tons of CO2e ($MMTCO_2e$). The 2020 target of 431 $MMTCO_2e$ requires the reduction of 78 $MMTCO_2e$, or approximately 16 percent from the State's projected 2020 business as usual emissions of 509 $MMTCO_2e$ (CARB, 2014). Under AB 32, CARB was required to adopt regulations by January 1, 2011 to achieve reductions in GHGs to meet the 1990 cap by 2020. Early measures CARB took to lower GHG emissions included requiring operators of the largest industrial facilities that emit 25,000 metric tons of CO_2 in a calendar year to submit verification of GHG emissions by December 1, 2010. The CARB Board also approved nine discrete early action measures that include regulations affecting landfills, motor vehicle fuels, refrigerants in cars, port operations and other sources, all of which became enforceable on or before January 1, 2010.

CARB's Scoping Plan that was adopted in 2009, proposes a variety of measures including: strengthening energy efficiency and building standards; targeted fees on water and energy use; a market-based cap-and-trade system; achieving a 33 percent renewable energy mix; and a fee regulation to fund the program. The 2014 update to the Scoping Plan identifies strategies moving beyond the 2020 targets to the year 2050.

The Cap and Trade Program established under the Scoping Plan sets a statewide limit on sources responsible for 85 percent of California's GHG emissions, and has established a market for long-term investment in energy efficiency and cleaner fuels since 2012.

Executive Order S-3-05

In 2005 the California Governor issued Executive Order S 3-05, GHG Emission, which established the following reduction targets:

- 2010: Reduce greenhouse gas emissions to 2000 levels;
- 2020: Reduce greenhouse gas emissions to 1990 levels;
- 2050: Reduce greenhouse gas emissions to 80 percent below 1990 levels.

The Executive Order directed the secretary of the California Environmental Protection Agency (CalEPA) to coordinate a multi-agency effort to reduce GHG emissions to the target levels. To comply with the Executive Order, the secretary of CalEPA created the California Climate Action Team (CAT), made up of members from various state agencies and commissions. The team released its first report in March 2006. The report proposed to achieve the targets by building on the voluntary actions of businesses, local governments, and communities and through State incentive and regulatory programs. The State achieved its first goal of reducing GHG emissions to 2000 levels by 2010.

Assembly Bill 1493

AB 1493 or the Pavley Bill sets tailpipe GHG emissions limits for passenger vehicles in California as well as fuel economy standards and is described in more detail above in Section 5.1 under Energy Conservation Management.

6.4 Regional – Southern California

The SCAQMD is the agency principally responsible for comprehensive air pollution control in the South Coast Air Basin. To that end, as a regional agency, the SCAQMD works directly with the Southern California Association of Governments (SCAG), county transportation commissions, and local governments and cooperates actively with all federal and state agencies.

South Coast Air Quality Management District

SCAQMD develops rules and regulations, establishes permitting requirements for stationary sources, inspects emission sources, and enforces such measures through educational programs or fines, when necessary. SCAQMD is directly responsible for reducing emissions from stationary, mobile, and indirect sources. The SCAQMD is also responsible for GHG emissions for projects where it is the lead agency. However, for other projects in the SCAB where it is not the lead agency, it is limited to providing resources to other lead agencies in order to assist them in determining GHG emission thresholds and GHG reduction measures. In order to assist local agencies with direction on GHG emissions, the SCAQMD organized a working group, which is described below.

<u>SCAQMD Working Group</u>

Since neither CARB nor the OPR has developed GHG emissions threshold, the SCAQMD formed a Working Group to develop significance thresholds related to GHG emissions. At the September 28, 2010 Working Group meeting, the SCAQMD released its most current version of the draft GHG emissions thresholds, which recommends a tiered approach that either provides a quantitative annual thresholds of 3,500 $MTCO_2e$ for residential uses, 1,400 $MTCO_2e$ for commercial uses, 3,000 $MTCO_2e$ for mixed uses s, and 10,000 $MTCO_2e$ for industrial uses. An alternative annual threshold of 3,000 $MTCO_2e$ for all land use types is also proposed.

Southern California Association of Governments

The SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization (MPO) for the majority of the southern California region and is the largest MPO in the nation. With respect to air quality planning, SCAG has prepared the Connect SoCal and 2019 FTIP addresses regional development and growth forecasts. Although the Connect SoCal and 2019 FTIP are primarily planning documents for future transportation projects a key component of these plans are to integrate land use planning with transportation planning that promotes higher density infill development in close proximity to existing transit service. These plans form the basis for the land use and transportation components of the AQMP, which are utilized in the preparation of air quality forecasts and in the consistency analysis included in the AQMP. The Connect SoCal, 2019 FTIP, and AQMP are based on projections originating within the City and County General Plans.

6.5 Local – City of El Segundo

Local jurisdictions, such as the City of El Segundo, have the authority and responsibility to reduce GHG emissions through their police power and decision-making authority. Specifically, the City is responsible for the assessment and mitigation of GHG emissions resulting from its land use decisions. In accordance with CEQA requirements and the CEQA review process, the City assesses the global climate change potential of new development projects, requires mitigation of potentially significant global climate change impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation.

In 2015, the City Council set GHG emission reduction goals consistent with the State's AB 32 GHG emission reduction targets. The City's target was calculated as a 15 percent decrease from 2005 levels by 2020 as recommended in the State AB 32 Scoping Plan. A longer-term goal was established for 2035 to reduce emissions by 49% below 2005 levels. These goals put the City on a path towards helping the State meet its long-term 2050 goal to reduce emissions by 80% below 1990 levels.

The *City of El Segundo Climate Action Plan* (El Segundo CAP), December 2017, has been prepared to help the City comply with the City's GHG emissions reduction goals as well as State and federal regulations that include AB 32, SB 32, and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP advances these goals and streamlines City efforts to deploy specific initiatives and programs that target the reduction of GHG emissions, while integrating these efforts with the other priorities such as economic development, regional mobility and connectivity, and improving the local air and water quality.

7.0 ATMOSPHERIC SETTING

7.1 South Coast Air Basin

The project site is located within south coastal Los Angeles County, which is part of the South Coast Air Basin (Air Basin) that includes the non-desert portions of Riverside, San Bernardino, and Los Angeles Counties and all of Orange County. The Air Basin is located on a coastal plain with connecting broad valleys and low hills to the east. Regionally, the Air Basin is bounded by the Pacific Ocean to the southwest and high mountains to the east forming the inland perimeter.

7.2 Local Climate

The climate of southwestern Los Angeles County is characterized by hot dry summers, mild moist winters with infrequent rainfall, moderate afternoon breezes, and generally fair weather. Occasional periods of strong Santa Ana winds and winter storms interrupt the otherwise mild weather pattern. Although the Air Basin is semi-arid, the air near the surface in southwestern Los Angeles County is typically moist because of the presence of a shallow marine layer. Except for infrequent periods when dry air is brought into the Air Basin by offshore winds, the ocean effect is dominant. Periods of heavy fog are frequent and low stratus clouds, often referred to as "high fog" are a characteristic feature.

Winds are an important parameter in characterizing the air quality environment of a project site because they both determine the regional pattern of air pollution transport and control the rate of dispersion near a source. Daytime winds in southwestern Los Angeles County are usually light breezes from off the coast as air moves regionally onshore from the cool Pacific Ocean to the warm Mojave Desert interior of Southern California. These winds allow for good local mixing, but as discussed above, these coastal winds carry significant amounts of industrial and automobile air pollutants from the densely urbanized western portion of the Air Basin into the interior valleys which become trapped by the mountains that border the eastern and northern edges of the Air Basin.

In the summer, strong temperature inversions may occur that limit the vertical depth through which air pollution can be dispersed. Air pollutants concentrate because they cannot rise through the inversion layer and disperse. These inversions are more common and persistent during the summer months. Over time, sunlight produces photochemical reactions within this inversion layer that creates ozone, a particularly harmful air pollutant. Occasionally, strong thermal convections occur which allows the air pollutants to rise high enough to pass over the mountains and ultimately dilute the smog cloud.

In the winter, light nocturnal winds result mainly from the drainage of cool air off of the mountains toward the valley floor while the air aloft over the valley remains warm. This forms a type of inversion known as a radiation inversion. Such winds are characterized by stagnation and poor local mixing and trap pollutants such as automobile exhaust near their source. While these inversions may lead to air pollution "hot spots" in heavily developed coastal areas of the Air Basin, there is not enough traffic in inland valleys to cause any winter air pollution problems. Despite light wind conditions, especially at night and in the early morning, winter is generally a period of good air quality in the project vicinity.

The temperature and precipitation levels for Los Angeles International Airport Monitoring station, which is the nearest weather station to the project site with historical data are shown below in Table D. Table D shows that August is typically the warmest month and January is typically the coolest month. Rainfall in the project area varies considerably in both time and space. Almost all the annual rainfall comes from

the fringes of mid-latitude storms from late November to early April, with summers being almost completely dry.

Table D – Monthly Climate Data

Month	Average Maximum Temperature (°F)	Average Minimum Temperature (°F)	Average Total Precipitation (inches)
January	65.2	47.5	2.65
February	65.3	48.9	2.67
March	65.3	50.5	1.85
April	67.4	53.0	0.77
May	69.1	56.4	0.17
June	71.9	59.7	0.05
July	75.1	62.9	0.02
August	76.3	63.8	0.07
September	76.0	62.6	0.16
October	73.6	58.5	0.39
November	70.2	52.3	1.40
December	65.9	47.9	1.82
Annual	**70.1**	**55.3**	12.02

7.3 Monitored Local Air Quality

The air quality at any site is dependent on the regional air quality and local pollutant sources. Regional air quality is determined by the release of pollutants throughout the Air Basin. Estimates of the existing emissions in the Air Basin provided in the 2012 AQMP, indicate that collectively, mobile sources account for 59 percent of the VOC, 88 percent of the NOx emissions and 40 percent of directly emitted PM2.5, with another 10 percent of PM2.5 from road dust. The 2016 AQMP found that since 2012 AQMP projections were made stationary source VOC emissions have decreased by approximately 12 percent, but mobile VOC emissions have increased by 5 percent. The percentage of NOx emissions remain unchanged between the 2012 and 2016 projections.

SCAQMD has divided the Air Basin into 38 air-monitoring areas with a designated ambient air monitoring station representative of each area. The project site is located on the southwestern edge of air monitoring area 3, which covers the Southwest Coastal LA County. Since not all air monitoring stations measure all of the tracked pollutants, the data from the following two monitoring stations, listed in the order of proximity to the project site have been used: Los Angeles-Westchester Parkway Station (Westchester Station) and Compton Station (Compton Station).

The Westchester Station is located approximately 2.8 miles northwest of the project site at 7201 W Westchester Parkway, Los Angeles, and the Compton Station (Compton Station) is located approximately 11 miles east of the project site at 700 North Bullis Road, Compton. The monitoring data is presented in Table E and shows the most recent three years of monitoring data from CARB. Ozone, NO_2, and PM10 were measured at the Westchester Station and PM2.5 was measured at the Compton Station. CO measurements have not been provided, since CO is currently in attainment in the Air Basin and monitoring of CO within the Air Basin ended on March 31, 2013.

Table E – Local Area Air Quality Monitoring Summary

Pollutant (Standard)	Year[1] 2018	2019	2020
Ozone: [1]			
Maximum 1-Hour Concentration (ppm)	0.074	0.082	0.117
Days > CAAQS (0.09 ppm)	0	0	**1**
Maximum 8-Hour Concentration (ppm)	0.065	0.067	0.074
Days > NAAQS (0.070 ppm)	0	0	**2**
Days > CAAQs (0.070 ppm)	0	0	**2**
Nitrogen Dioxide: [1]			
Maximum 1-Hour Concentration (ppb)	59.6	56.6	59.7
Days > NAAQS (100 ppb)	0	0	0
Days > CAAQS (180 ppb)	0	0	0
Inhalable Particulates (PM10) :[1]			
Maximum 24-Hour National Measurement (ug/m^3)	45.3	62.1	55.6
Days > NAAQS (150 ug/m^3)	0	0	0
Days > CAAQS (50 ug/m^3)	0	**2**	**1**
Annual Arithmetic Mean (AAM) (ug/m^3)	17.6	19.7	22.0
Annual > NAAQS (50 ug/m^3)	No	No	No
Annual > CAAQS (20 ug/m^3)	No	No	**Yes**
Ultra-Fine Particulates (PM2.5):[2]			
Maximum 24-Hour National Measurement (ug/m^3)	49.4	39.5	67.5
Days > NAAQS (35 ug/m^3)	**2**	**1**	**19**
Annual Arithmetic Mean (AAM) (ug/m^3)	13.2	10.8	14.6
Annual > NAAQS and CAAQS (12 ug/m^3)	**Yes**	No	**Yes**

Notes: Exceedances are listed in **bold.** CAAQS = California Ambient Air Quality Standard; NAAQS = National Ambient Air Quality Standard; ppm = parts per million; ppb = parts per billion; ND = no data available.

[1] Data obtained from the Westchester Station.

[2] Data obtained from the Compton Station.

Source: http://www.arb.ca.gov/adam/

Ozone

During the last three years, the State 1-hour concentration standard for ozone has been exceeded for only one day in the year 2020 at the Westchester Station. The State and Federal 8-hour ozone standard has been exceeded for only 2 days in the year 2020 for the past three years at the Westchester Station.

Ozone is a secondary pollutant as it is not directly emitted. Ozone is the result of chemical reactions between other pollutants, most importantly hydrocarbons and NO_2, which occur only in the presence of bright sunlight. Pollutants emitted from upwind cities react during transport downwind to produce the oxidant concentrations experienced in the area. Many areas of Southern California contribute to the

ozone levels experienced at this monitoring station, with the more significant areas being those directly upwind.

Nitrogen Dioxide

The Westchester Station did not record an exceedance of either the Federal or State 1-hour NO_2 standards for the last three years.

Particulate Matter

The State 24-hour concentration standard for PM10 has been exceeded between zero and two days each year over the past three years at the Westchester Station. Over the past three years the Federal 24-hour standard for PM10 did not record an exceedance at the Westchester Station. The annual PM10 concentration at the Westchester Station has only exceeded the State standard for year 2020 and has not exceeded the federal standard for the past three years.

Over the past three years the federal 24-hour concentration standard for PM2.5 has been exceeded between 1 and 19 day each year over the past three years at the Compton Station. The annual PM2.5 concentrations at the Compton Station has exceeded both the State and Federal standards for two of the past three years. Particulate levels in the area are due to natural sources, grading operations, and motor vehicles.

According to the EPA, some people are much more sensitive than others to breathing fine particles (PM10 and PM2.5). People with influenza, chronic respiratory and cardiovascular diseases, and the elderly may suffer worsening illness and premature death due to breathing these fine particles. People with bronchitis can expect aggravated symptoms from breathing in fine particles. Children may experience decline in lung function due to breathing in PM10 and PM2.5. Other groups considered sensitive are smokers and people who cannot breathe well through their noses. Exercising athletes are also considered sensitive, because many breathe through their mouths during exercise.

7.4 Toxic Air Contaminant Levels in the Air Basin

In order to determine the Air Basin-wide risks associated with major airborne carcinogens, the SCAQMD conducted the Multiple Air Toxics Exposure Study (MATES) studies. According to the MATES V study (SCAQMD, 2021), the project site has an estimated cancer risk of 598 per million persons chance of cancer in the vicinity of the project site. In comparison, the average cancer risk for the Air Basin is 455 per million persons. The MATES V study that monitored air toxins between May 1, 2018 to April 30, 2019 found that cancer risk from air toxics has declined significantly in the Air Basin with a 40 percent decrease in cancer risk since the monitoring for the MATES IV study that occurred between July 1, 2012 and June 30, 2013 and an 84 percent decrease in cancer risk since the monitoring for the MATES II study that occurred between April 1, 1998 and March 31, 1999.

The MATES V study also analyzed impacts specific to the communities experiencing environmental injustices (EJ communities) that were evaluated using the Senate Bill 535 definition of disadvantaged communities, which found that between MATES IV and MATES V, the cancer risk from air toxics decreased by 57 percent in EJ communities overall, compared to a 53 percent reduction in non-EJ communities.

In order to provide a perspective of risk, it is often estimated that the incidence in cancer over a lifetime for the U.S. population is around 1 in 3, or a risk of about 300,000 per million persons. The MATES-III study referenced a Harvard Report on Cancer Prevention, which estimated that of cancers associated with

known risk factors, about 30 percent were related to tobacco, about 30 percent were related to diet and obesity, and about 2 percent were associated with environmental pollution related exposures that includes hazardous air pollutants.

.

8.0 MODELING PARAMETERS AND ASSUMPTIONS

8.1 CalEEMod Model Input Parameters

The criteria air pollution and GHG emissions impacts created by the proposed project have been analyzed through use of CalEEMod Version 2020.4.0. CalEEMod is a computer model published by the SCAQMD for estimating air pollutant emissions. The CalEEMod program uses the EMFAC2017 computer program to calculate the emission rates specific for the South Coast Air Basin portion of Los Angeles County for employee, vendor and haul truck vehicle trips and the OFFROAD2011 computer program to calculate emission rates for heavy equipment operations. EMFAC2017 and OFFROAD2011 are computer programs generated by CARB that calculates composite emission rates for vehicles. Emission rates are reported by the program in grams per trip and grams per mile or grams per running hour.

The project characteristics in the CalEEMod model were set to a project location of South Coast Air Basin portion of Los Angeles County, a Climate Zone of 9, utility company of Southern California Edison and an opening year of 2023 was utilized in this analysis. In addition, the EMFAC off-model adjustment factors for gasoline light duty vehicle to account for the SAFE Vehicle rule was selected in the CalEEMod model run.

Land Use Parameters

The proposed project would consist of construction of: 1) a 4-story 93,559 net square foot (105,469 gross square foot) office building with a mezzanine level and a new 23-space surface parking lot (1950 East Grand Avenue); 2) a 4-level 258 space parking structure (1960 East Grand Avenue); and 3) landscaping and hardscape improvements including the addition of a large outdoor landscaped plaza with outdoor seating (1950 and 1960 East Grand Avenue). According to the project applicant, the proposed project would disturb 4.0 acres of the 5.37-acre project site. The proposed project's land use parameters that were entered into the CalEEMod model are shown in Table F. It should be noted that one unit of apartment high rise was added to the CalEEMod model run with all parameters for this apartment unit set to zero, other than for two natural gas fireplaces, in order to be able to model the air emissions created from the two proposed firepits in the plaza area.

Table F – CalEEMod Land Use Parameters

Proposed Land Use	Land Use Subtype in CalEEMod	Land Use Size[1]	Lot Acreage[2]	Building/Paving[3] (square feet)
Office Building (1950 E Grand Ave)[3]	General Office Building	93.559 TSF	2.60	93,559
Parking Structure (1960 E Grand Ave)	Enclosed Parking with Elevator	258 PS	0.66	103,000
Surface Parking Lot (1950 E Grand Ave)	Parking Lot	23 PS	0.19	9,200
Surface Parking Lot (1950 E Grand Ave)	Other Non-Asphalt Surfaces	24.00 TSF	0.55	24,000

Notes:
[1] TSF = Thousand Square Feet; PS = Parking Space.
[2] Lot acreage calculated based on the total area disturbed of 4.0-acres.
[3] Building/Paving square feet represent area where architectural coatings will be applied.

Construction Parameters

The proposed project construction is expected to begin in October 2021 and be completed by March, 2024. The construction-related GHG emissions were based on a 30-year amortization rate as

recommended in the SCAQMD GHG Working Group meeting on November 19, 2009. The phases of construction activities that have been analyzed are detailed below and include: 1) Demolition/Site Preparation, 2) Grading, 3) Building construction, 4) Paving, and 5) Application of architectural coatings.

Demolition/Site Preparation

Approximately 3-acres of the 4-acres to be disturbed is currently paved. In order to calculate the amount of demolition material to be removed, the approximately 130,700 square feet of pavement was assumed to be an average of 4-inches thick and weigh 145 pounds per square foot, which results in 3,159 tons of pavement that would be removed from the project site that was entered into the CalEEMod model. This would require a total of 312 haul truck trips (average 14.2 haul truck trips per day over 22 workdays). In order to account for the project location with no active landfills in the vicinity of the project, the average haul trip length was increased to 43 miles (86 miles roundtrip), which is the distance to the Irwindale material processing site.

The demolition/site preparation phase has been modeled as a demolition phase, instead of a site preparation phase in order to account for the material to be demolished onsite and was modeled as starting in October 2022 and occurring over 22 working days. The demolition/site preparation activities would generate 15 worker trips per day. In order to account for water truck emissions, six vendor truck emissions were added to the demolition phase. The onsite equipment would consist of one concrete/industrial saw, three excavators, and two rubber tired dozers, which is based on the CalEEMod default equipment mix. The mitigation of water all exposed areas three times per day was chosen in order to account for the fugitive dust reduction that would occur through adhering to SCAQMD Rule 403, which requires that the Best Available Control Measures be utilized to reduce fugitive dust emissions.

Grading

The grading phase was modeled as starting during the last week of the demolition/site preparation phase and would occur over 38 working days. The proposed grading is anticipated to include the export of 8,120 cubic yards of material, which would require a total of 1,015 haul truck trips (average 26.7 haul truck trips per day over 38 workdays). In order to account for the project location with no active landfills in the vicinity of the project, the average haul trip length was increased to 43 miles (86 miles roundtrip), which is the distance to the Irwindale material processing site.

The grading phase would generate 15 worker trips per day. In order to account for water truck emissions, six vendor truck emissions were added to the grading phase. The onsite equipment would consist of consist of one excavator, one grader, one rubber-tired dozer, and three of either tractors, loaders, or backhoes, which is based on the CalEEMod default equipment mix. The mitigation of water all exposed areas three times per day was chosen in order to account for the fugitive dust reduction that would occur through adhering to SCAQMD Rule 403, which requires that the Best Available Control Measures be utilized to reduce fugitive dust emissions.

Building Construction

The building construction would occur after the completion of the grading phase and was modeled as occurring over 320 working days. The building construction phase would generate 111worker trips and 47 vendor trips per day. The onsite equipment would consist of the simultaneous operation of one crane, three forklifts, one generator, one welder, and three of either tractors, loaders, or backhoes, which is based on the CalEEMod default equipment mix.

Paving

The paving phase would occur concurrently with the building construction phase and was modeled as starting in October 2023 and occurring over 16 working days, which is based on the project applicant's construction timing. The paving phase would generate 20 worker trips per day. The onsite equipment would consist of the simultaneous operation of two cement and mortar mixers, one paver, two paving equipment, two rollers, and one of either a tractor, loader, or backhoe, which is based on the CalEEMod default equipment mix.

Architectural Coating

The architectural coating phase would occur concurrently with the building construction phase and was modeled as starting February 2024 and occurring over 16 working days, which is based on the project applicant's construction timing. The architectural coating phase was modeled based on covering 158,204 square feet of non-residential interior area, 52,735 square feet of non-residential exterior area, and 10,984 square feet of parking area. The architectural coating phase would generate an average of 16 worker trips per day. The onsite equipment would consist of one air compressor, which is based on the CalEEMod default equipment mix.

Operational Emissions Modeling

The operations-related criteria air pollutant emissions and GHG emissions created by the proposed project have been analyzed through use of the CalEEMod model. The proposed project was analyzed in the CalEEMod model based on the land use parameters provided above.

Mobile Sources

Mobile sources include emissions generated from the additional vehicle trips that would occur through implementation of the proposed project. The vehicle trips associated with the proposed project were obtained from the *1950-1960 East Grand Avenue Project, El Segundo Draft Transportation Impact Analysis* (Traffic Analysis), prepared by Fehr and Peers, January 2022. The Traffic Analysis found that the proposed project would generate 1,027 weekday vehicle trips, which was entered into the CalEEMod. Since the Traffic Analysis did not provide Saturday or Sunday daily trip rates for the proposed project, the default CalEEMod daily trip generation rates of: 211 Saturday vehicle trips; and 65 Sunday vehicle trips were utilized.

The CalEEMod model provides the selection of "mitigation" to account for project conditions that would result in less emissions than a project without these conditions, however it should be noted that this "mitigation" may represent current conditions, such as development that is in close proximity to an existing transit facility, where a project built at such location would create less vehicle trips and associated emissions than a project that was not built in close proximity to an existing transit facility. The mobile source emissions analysis for the project included the CalEEMod "mitigation" of improved pedestrian network onsite and connecting offsite, and increase transit accessibility with 0.06 mile to the nearest transit to account for the existing LA Metro Bus Stop at Grand Avenue and Sepulveda Boulevard that is located as near as 400 feet west of the project site.

Area Sources

Area sources include emissions from consumer products, landscape equipment, and architectural coatings. The area source emissions were based on the on-going use of the proposed project in the CalEEMod model. However, the Landscape Plan shows that the Number 6 Recreation Center would have

one communal fire table and Number 12 Large Entertainment Courtyard would have three fire pits. Since SCAQMD Rule 445 restricts the installation of wood-burning devices into new developments, the fire table and three fire pits were modeled as four natural gas only fireplaces in the CalEEMod model. No other changes were made to the default area source parameters in the CalEEMod model.

Energy Usage

Energy usage includes emissions from electricity and natural gas used onsite. The energy usage was based on the ongoing use of the proposed project in the CalEEMod Model. No changes were made to the default energy usage parameters in the CalEEMod model.

Solid Waste

Waste includes the GHG emissions associated with the processing of waste from the proposed project as well as the GHG emissions from the waste once it is interred into a landfill. The analysis was based on the default CalEEMod solid waste generating rate of 87 tons of solid waste per year. No changes were made to the default solid waste parameters in the CalEEMod model.

The CalEEMod "mitigation" of a 50 percent reduction in landfill waste was selected to account for implementation of AB 341 that provides strategies to reduce, recycle or compost solid waste by 75 percent by 2020. Only 50 percent was selected, since AB 341 builds upon the waste reduction measures of SB 939 and 1374 and therefore, it was assumed approximately 25 percent of the waste reduction target has already been accounted for in the CalEEMod model.

Water and Wastewater

Water includes the water used for the interior of the buildings as well as for landscaping and is based on the GHG emissions associated with the energy used to transport and filter the water. The analysis was based on the default CalEEMod water usage rate of 16,628,769 gallons per year of indoor water use and 10,191,826 gallons per year of outdoor water use. No changes were made to the default water and wastewater parameters in the CalEEMod model.

The CalEEMod "mitigation" of the use of low flow faucets, and toilets and use of smart irrigation system controllers were selected to account for the implementation of the 2016 CCR Title 24 Part 11 (CalGreen) requirements.

Backup Diesel Generator

The proposed project would include the installation of a backup diesel-powered generator located on the northwest corner of the existing parking structure. The backup generator would provide backup power for critical systems in the new office building and parking structure, such as emergency lighting, security, and server rooms. The exact size of the backup generator has not yet been determined, however similar projects that Vista Environmental has worked on have utilized a 250 kW 389 horsepower backup generator for these power requirements. As such, this analysis has analyzed the emissions created from a 250 kW 389 horsepower diesel-powered backup generator.

Backup generators typically cycle on for 30 minutes on a weekly basis in order to keep the engine lubricated and ready to use in case of a power outage. The typical cycling of a backup generator would operate for approximately 26 hours per year. The backup diesel generator was modeled in CalEEMod based on a 389 horsepower engine, a 0.73 load factor, 0.5 hour per day, and 26 hours per year.

8.2 Energy Use Calculations

The proposed project is anticipated to consume energy during both construction and operation of the proposed project and the parameters utilized to calculate energy use from construction and operation of the proposed project are detailed separately below.

Construction-Related Energy Use

Construction of the proposed project is anticipated to use energy in the forms of petroleum fuel for both off-road equipment as well as from the transport of workers and materials to and from the project site and the calculations for each source are described below.

Off-Road Construction Equipment

The off-road construction equipment fuel usage was calculated through use of the CalEEMod model's default off-road equipment assumptions detailed above in Section 8.1. For each piece of off-road equipment, the fuel usage was calculated through use of the *2017 Off-road Diesel Emission Factors* spreadsheet, prepared by CARB (https://ww3.arb.ca.gov/msei/ordiesel.htm). The Spreadsheet provides the following formula to calculate fuel usage from off-road equipment:

> Fuel Used = Load Factor x Horsepower x Total Operational Hours x BSFC / Unit Conversion
>
> Where:
>
> Load Factor - Obtained from CalEEMod default values
>
> Horsepower – Obtained from CalEEMod default values
>
> Total Operational Hours – Calculated by multiplying the daily hours by the number of working days for each phase of construction as shown on the project applicant's construction schedule.
>
> BSFC – Brake Specific Fuel Consumption (pounds per horsepower-hour) – If less than 100 Horsepower = 0.408, if greater than 100 Horsepower = 0.367
>
> Unit Conversion – Converts pounds to gallons = 7.109

Table G shows the off-road construction equipment fuel calculations based on the above formula. Table G shows that the off-road equipment utilized during construction of the proposed project would consume 52,904 gallons of fuel.

Table G – Off-Road Equipment and Fuel Consumption from Construction of the Proposed Project

Equipment Type	Equipment Quantity	Horse-power	Load Factor	Operating Hours per Day	Total Operational Hours[1]	Fuel Used (gallons)
Demolition/Site Preparation						
Concrete/Industrial Saws	1	81	0.73	8	176	597
Excavators	3	158	0.38	8	528	1,637
Rubber Tired Dozers	2	247	0.4	8	352	1,795
Grading						
Excavators	1	158	0.38	8	304	942
Graders	1	187	0.41	8	304	1,203
Rubber Tired Dozers	1	247	0.4	8	304	1,551
Tractors/Loaders/Backhoes	3	97	0.37	8	912	1,879
Building Construction						
Crane	1	231	0.29	7	2,240	7,747
Forklifts	3	89	0.20	8	7,680	7,846
Generator Set	1	84	0.74	8	2,560	9,133
Tractor/Loader/Backhoes	3	97	0.37	7	6,720	13,842
Welder	1	46	0.45	8	2,560	3,041
Paving						
Cement and Mortar Mixers	2	9	0.56	6	192	56
Pavers	1	130	0.42	8	128	361

Source: CalEEMod Version 2020.4.0 (see Appendix A); CARB, 2017.

On-Road Construction-Related Vehicle Trips

The on-road construction-related vehicle trips fuel usage was calculated through use of the construction vehicle trip assumptions from the CalEEMod model run as detailed above in Section 8.1. The calculated total construction miles was then divided by the fleet average for all of Southern California miles per gallon rates for the year 2022 calculated through use of the EMFAC2017 model (https://www.arb.ca.gov/emfac/2017/) and the EMFAC2017 model printouts are shown in Appendix B. Table H shows the on-road construction vehicle trips modeled in CalEEMod and the fuel usage calculations.

Table H shows that the on-road construction-related vehicle trips would consume 40,837 gallons of fuel and as detailed above, Table G shows that the off-road construction equipment would consume 52,904 gallons of fuel. This would result in the total consumption of 93,742 gallons of petroleum fuel from construction of the proposed project.

Table H – On-Road Vehicle Trips and Fuel Consumption from Construction of the Proposed Project

Vehicle Trip Types	Daily Trips	Trip Length (miles)	Total Miles per Day	Total Miles per Phase[1]	Fleet Average Miles per Gallon[2]	Fuel Used (gallons)
Demolition/Site Preparation						
Worker Trips	15	14.7	221	4,851	26.0	187
Vendor Truck Trips	6	6.9	41	911	8.2	111
Haul Truck Trips	14.2	43.0	610	13,416	8.2	1,631
Grading						
Worker Trips	15	14.7	221	8,374	26.0	322
Vendor Truck Trips	6	6.9	41	1,573	8.2	191
Haul Truck Trips	26.7	43.0	1,149	43,645	8.2	5,306
Building Construction						
Worker Trips	111	14.7	1,632	522,144	26.0	20,091
Vendor Truck Trips	47	6.9	324	103,776	8.2	12,617
Paving/Site Improvements

Source: CalEEMod Version 2020.4.0; CARB, 2018.

Operations-Related Energy Use

The operation of the proposed project is anticipated to use energy in the forms of petroleum fuel, electricity, and natural gas, and the calculations for each source are described below.

Operational Petroleum Fuel

The on-road operations-related vehicle trips fuel usage was calculated through use of the total annual vehicle miles traveled assumptions from the CalEEMod model run as detailed above in Section 8.1, which found that operation of the proposed project would generate 6,839,658 vehicle miles traveled per year. The calculated total construction miles was then divided by the Southern California fleet average rate of 26.0 miles per gallon, which was calculated through use of the EMFAC2017 model and based on the year 2022. The EMFAC2017 model printouts are shown in Appendix B. Based on the above calculation methodology, operational vehicle trips generated from the proposed project would consume 263,181 gallons per year.

Operational Electricity Use

The operations-related electricity usage was calculated in the CalEEMod model run that is detailed above in Section 8.1 that found the parking structure will consume 561,408 kilowatt hours (kWh) per year, the proposed office building will consume 1,318,360 kWh per year, and the proposed surface parking lot will consume 3,220 kWh per year. As such the proposed project will use 1,882,988 kWh per year with

implementation of Title 24 part 6 requirements that require the implementation of building energy efficiency standards that include the use of LED lighting.

Operational Natural Gas Use

The operations-related natural gas usage was calculated in the CalEEMod model run that is detailed above in Section 8.1 that found the proposed project will use 1,087,390 kilo British Thermal Units (kBTU) per year, which is equivalent to 1,087 mega-British Thermal units (MBTU) per year of natural gas.

9.0 THRESHOLDS OF SIGNIFICANCE

9.1 Regional Air Quality

Many air quality impacts that derive from dispersed mobile sources, which are the dominate pollution generators in the Air Basin, often occurs hours later and miles away after photochemical processes have converted primary exhaust pollutants into secondary contaminants such as ozone. The incremental regional air quality impact of an individual project is generally very small and difficult to measure. Therefore, SCAQMD has developed significance thresholds based on the volume of pollution emitted rather than on actual ambient air quality because the direct air quality impact of a project is not quantifiable on a regional scale. The SCAQMD CEQA Handbook states that any project in the Air Basin with daily emissions that exceed any of the identified significance thresholds should be considered as having an individually and cumulatively significant air quality impact. For the purposes to this air quality impact analysis, a regional air quality impact would be considered significant if emissions exceed the SCAQMD significance thresholds identified in Table I.

Table I – SCAQMD Regional Criteria Pollutant Emission Thresholds of Significance

	Pollutant Emissions (pounds/day)						
	VOC	**NOx**	**CO**	**SOx**	**PM10**	**PM2.5**	**Lead**
Construction	75	100	550	150	150	55	3
Operation	55	55	550	150	150	55	3

9.2 Local Air Quality

Project-related construction air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin. In order to assess local air quality impacts the SCAQMD has developed Localized Significant Thresholds (LSTs) to assess the project-related air emissions in the project vicinity. SCAQMD has also provided *Final Localized Significance Threshold Methodology* (LST Methodology), July 2008, which details the methodology to analyze local air emission impacts. The LST Methodology found that the primary emissions of concern are NO_2, CO, PM10, and PM2.5.

The LST Methodology provides Look-Up Tables with different thresholds based on the location and size of the project site and distance to the nearest sensitive receptors. As detailed above in Section 7.3, the project site is located in Monitoring Area 3, which covers the Southwest Coastal LA County. The Look-Up Tables provided in the LST Methodology include project site acreage sizes of 1-acre, 2-acres and 5-acres. Since the area to be disturbed on the project site is 4.0 acres, the 2-acre and 5-acre project sites shown in the Look-Up Tables were interpolated in order to calculate the 4.0-acre threshold that has been utilized in this analysis.

The nearest offsite sensitive receptors are guests at the hotel located as near as 10 feet (3 meters) south of the project site. According to LST Methodology, any receptor located closer than 25 meters (82 feet) shall be based on the 25-meter thresholds. Table J below shows the LSTs for NO_2, PM10 and PM2.5 for both construction and operational activities.

Table J – SCAQMD Local Air Quality Thresholds of Significance

Activity	Allowable Emissions (pounds/day)[1]			
	NOx	CO	PM10	PM2.5
Construction	175	1,520	13	7
Operation	175	1,520	3	2

Notes:

[1] The nearest offsite sensitive receptors are guests at the hotel located as near as 10 feet (3 meters) south of the project site. According to SCAQMD methodology, all receptors closer than 25 meters are based on the 25-meter threshold.

Source: Calculated from SCAQMD's Mass Rate Look-up Tables for two and five acres in Air Monitoring Area 3, Southwest Coastal LA County.

9.3 Toxic Air Contaminants

According to the SCAQMD CEQA Handbook, any project that has the potential to expose the public to toxic air contaminants in excess of the following thresholds would be considered to have a significant air quality impact:

- If the Maximum Incremental Cancer Risk is 10 in one million or greater; or
- Toxic air contaminants from the proposed project would result in a Hazard Index increase of 1 or greater.

In order to determine if the proposed project may have a significant impact related to toxic air contaminants (TACs), the *Health Risk Assessment Guidance for analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*, (Diesel Analysis) prepared by SCAQMD, August 2003, recommends that if the proposed project is anticipated to create TACs through stationary sources or regular operations of diesel trucks on the project site, then the proximity of the nearest receptors to the source of the TAC and the toxicity of the hazardous air pollutant (HAP) should be analyzed through a comprehensive facility-wide health risk assessment (HRA).

9.4 Odor Impacts

The SCAQMD CEQA Handbook states that an odor impact would occur if the proposed project creates an odor nuisance pursuant to SCAQMD Rule 402, which states:

> "A person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
>
> The provisions of this rule shall not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals."

If the proposed project results in a violation of Rule 402 with regards to odor impacts, then the proposed project would create a significant odor impact.

9.5 Energy Conservation

The 2018 amendments and additions to the CEQA Checklist now include an Energy Section that analyzes the proposed project's energy consumption in order to avoid or reduce inefficient, wasteful or

unnecessary consumption of energy. Appendix F of the 2020 CEQA Statute and Guidelines, states the following:

> The goal of conserving energy implies the wise and efficient use of energy. The means of achieving this goal include:
>
> (1) Decreasing overall per capita energy consumption,
>
> (2) Decreasing reliance on fossil fuels such as coal, natural gas and oil, and
>
> (3) Increasing reliance on renewable energy sources.

Since the Energy Section was just added, no state or local agencies have adopted specific criteria or thresholds to be utilized in an energy impact analysis. However, the 2018 *Guidelines for the Implementation of the California Environmental Quality Act,* provide the following direction on how to analyze a project's energy consumption:

> "If analysis of the project's energy use reveals that the project may result in significant environmental effects due to wasteful, inefficient, or unnecessary use of energy, or wasteful use of energy resources, the EIR shall mitigate that energy use. This analysis should include the project's energy use for all project phases and components, including transportation-related energy, during construction and operation. In addition to building code compliance, other relevant considerations may include, among others, the project's size, location, orientation, equipment use and any renewable energy features that could be incorporated into the project. (Guidance on information that may be included in such an analysis is presented in Appendix F.) This analysis is subject to the rule of reason and shall focus on energy use that is caused by the project. This analysis may be included in related analyses of air quality, greenhouse gas emissions, transportation or utilities in the discretion of the lead agency."

If the proposed project creates inefficient, wasteful or unnecessary consumption of energy during construction or operation activities or conflicts with a state or local plan for renewable energy or energy efficiency, then the proposed project would create a significant energy impact.

9.6 Greenhouse Gas Emissions

The City of El Segundo has adopted a Climate Action Plan (El Segundo CAP) that has been prepared to assist the City comply with various local, regional, State and federal regulations that include AB 32, SB 32, and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP advances these goals and streamlines City efforts to deploy specific initiatives and programs that target the reduction of GHG emissions, while integrating these efforts with the other priorities such as economic development, regional mobility and connectivity, and improving the local air and water quality. The El Segundo CAP states: *With the CEQA process, a qualified CAP framework offers the ability to streamline future CEQA greenhouse gas analyses by being able to tier off the climate action plan*.

Therefore, the proposed project would be considered to be consistent with the El Segundo CAP if the proposed project can demonstrate it is consistent with the applicable emissions reduction measures included in the El Segundo CAP, and the programs and standards that would be implemented as a result of the El Segundo CAP.

The GHG emissions analysis for both construction and operation of the proposed project can be found below in Sections 10.8 and 10.9.

10.0 IMPACT ANALYSIS

10.1 CEQA Thresholds of Significance

Consistent with CEQA and the State CEQA Guidelines, a significant impact related to air quality, energy, and GHG emissions would occur if the proposed project is determined to:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard;
- Expose sensitive receptors to substantial pollutant concentrations;
- Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people;
- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation;
- Conflict with or obstruct a state or local plan for renewable energy;
- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs.

10.2 Air Quality Compliance

The proposed project would not conflict with or obstruct implementation of the SCAQMD Air Quality Management Plan (AQMP). The following section discusses the proposed project's consistency with the SCAQMD AQMP.

SCAQMD Air Quality Management Plan

The California Environmental Quality Act (CEQA) requires a discussion of any inconsistencies between a proposed project and applicable General Plans and regional plans (CEQA Guidelines Section 15125). The regional plan that applies to the proposed project includes the SCAQMD AQMP. Therefore, this section discusses any potential inconsistencies of the proposed project with the AQMP.

The purpose of this discussion is to set forth the issues regarding consistency with the assumptions and objectives of the AQMP and discuss whether the proposed project would interfere with the region's ability to comply with Federal and State air quality standards. If the decision-makers determine that the proposed project is inconsistent, the lead agency may consider project modifications or inclusion of mitigation to eliminate the inconsistency.

The SCAQMD CEQA Handbook states that "New or amended GP Elements (including land use zoning and density amendments), Specific Plans, and significant projects must be analyzed for consistency with the AQMP." Strict consistency with all aspects of the plan is usually not required. A proposed project should be considered to be consistent with the AQMP if it furthers one or more policies and does not obstruct other policies. The SCAQMD CEQA Handbook identifies two key indicators of consistency:

(1) Whether the project will result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP.

(2) Whether the project will exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

Both of these criteria are evaluated in the following sections.

Criterion 1 - Increase in the Frequency or Severity of Violations?

Based on the air quality modeling analysis contained in this report, short-term regional construction air emissions would not result in significant impacts based on SCAQMD regional thresholds of significance discussed above in Section 9.1 or local thresholds of significance discussed above in Section 9.2. The ongoing operation of the proposed project would generate air pollutant emissions that are inconsequential on a regional basis and would not result in significant impacts based on SCAQMD thresholds of significance discussed above in Section 9.1. The analysis for long-term local air quality impacts showed that local pollutant concentrations would not be projected to exceed the air quality standards. Therefore, a less than significant long-term impact would occur and no mitigation would be required.

Therefore, based on the information provided above, the proposed project would be consistent with the first criterion.

Criterion 2 - Exceed Assumptions in the AQMP?

Consistency with the AQMP assumptions is determined by performing an analysis of the proposed project with the assumptions in the AQMP. The emphasis of this criterion is to insure that the analyses conducted for the proposed project are based on the same forecasts as the AQMP. The AQMP is developed through use of the planning forecasts provided in the RTP/SCS (Connect SoCal) and FTIP (2019 FTIP). The RTP/SCS is a major planning document for the regional transportation and land use network within Southern California. The RTP/SCS is a long-range plan that is required by federal and state requirements placed on SCAG and is updated every four years. The FTIP provides long-range planning for future transportation improvement projects that are constructed with state and/or federal funds within Southern California. Local governments are required to use these plans as the basis of their plans for the purpose of consistency with applicable regional plans under CEQA. For this project, the City of El Segundo General Plan's Land Use Plan defines the assumptions that are represented in AQMP.

The project site is currently designated as Corporate Office in the General Plan and is zoned Corporate Office (CO). The CO Zone permits a maximum floor area ratio (FAR) of 0.8:1. Parcel 1 is allowed a maximum of 93,568 square feet of net floor area. The FAR for Parcel 1 will be 0.8:1. As such, the project is consistent with the existing land use designation and zoning. Therefore, the proposed project is not anticipated to exceed the AQMP assumptions for the project site and is found to be consistent with the AQMP for the second criterion.

Based on the above, the proposed project will not result in an inconsistency with the SCAQMD AQMP. Therefore, a less than significant impact will occur in relation to implementation of the AQMP.

Level of Significance

Less than significant impact.

10.3 Cumulative Net Increase in Non-Attainment Pollution

The proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable Federal or State ambient air quality standard. The following section calculates the potential air emissions associated with the construction and operations of the proposed project and compares the emissions to the SCAQMD standards.

Construction Emissions

The construction activities for the proposed project are anticipated to include demolition of an existing surface parking lot and passive open space area, grading of approximately 4 acres of the project site, building construction of the proposed office building, parking structure, surface parking lot and plaza, paving and site improvements, and application of architectural coatings. The construction emissions have been analyzed for both regional and local air quality impacts.

Construction-Related Regional Impacts

The CalEEMod model has been utilized to calculate the construction-related regional emissions from the proposed project and the input parameters utilized in this analysis have been detailed in Section 7.1. The summer or winter daily construction-related criteria pollutant emissions from the proposed project for each phase of construction activities are shown below in Table K and the CalEEMod daily printouts are shown in Appendix A. Since it is possible that demolition and grading activities may occur concurrently in year 2022, the emissions for demolition and grading activities have been combined in Table K. In addition, Table K shows the combined building construction (year 2024), paving/site improvements, and architectural coating activities, since these phases may occur concurrently towards the end of the building construction phase.

Table K – Construction-Related Regional Criteria Pollutant Emissions

Activity	Pollutant Emissions (pounds/day)					
	VOC	NOx	CO	SO_2	PM10	PM2.5
Combined Demolition and Grading (Year 2022)[1]						
Onsite	2.94	35.49	23.11	0.08	2.77	1.74
Offsite	1.57	43.08	12.29	0.14	4.08	1.24
Total	**4.51**	**78.57**	**35.40**	**0.22**	**6.85**	**2.97**
Building Construction (Year 2023)						
Onsite	1.57	14.38	16.24	0.03	0.70	0.66
Offsite	0.43	2.16	4.72	0.02	1.56	0.43
Total	**2.01**	**16.55**	**20.97**	**0.05**	**2.26**	**1.09**
Combined Building Construction (Year 2024), Paving/Site Improvements, and Architectural Coatings						
Onsite	66.99	23.45	30.17	0.05	1.11	1.04
Offsite	0.55	2.23	5.89	0.02	1.85	0.56
Total	**67.53**	**25.69**	**36.06**	**0.07**	**2.96**	**1.60**
Maximum Daily Construction Emissions	**67.53**	**78.57**	**36.06**	**0.22**	**6.85**	**2.97**
SCQAMD Thresholds	75	100	550	150	150	55
Exceeds Threshold?	No	No	No	No	No	No

Notes:
[1] Demolition and Grading based on adherence to fugitive dust suppression requirements from SCAQMD Rule 403.
[2] Onsite emissions from equipment not operated on public roads.
[3] Offsite emissions from vehicles operating on public roads.

Source: CalEEMod Version 2020.4.0.

Table K shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds during either the combined demolition and grading, building construction, or the combined building construction, paving/site improvement, and architectural coating phases. Therefore, a less than significant regional air quality impact would occur from construction of the proposed project.

Construction-Related Local Impacts

Construction-related air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin.

The local air quality emissions from construction were analyzed through utilizing the methodology described in *Localized Significance Threshold Methodology* (LST Methodology), prepared by SCAQMD, revised October 2009. The LST Methodology found the primary criteria pollutant emissions of concern are NOx, CO, PM10, and PM2.5. In order to determine if any of these pollutants require a detailed analysis of the local air quality impacts, each phase of construction was screened using the SCAQMD's Mass Rate LST Look-up Tables. The Look-up Tables were developed by the SCAQMD in order to readily determine if the daily onsite emissions of CO, NOx, PM10, and PM2.5 from the proposed project could result in a significant impact to the local air quality.

Table L shows the onsite emissions from the CalEEMod model for the different construction phases and the calculated localized emissions thresholds that have been detailed above in Section 7.2. Since it is possible that building construction/renovation, architectural coating, and paving/site improvement activities may occur concurrently, Table L shows the combined local criteria pollutant emissions from building construction, paving and architectural coating phases of construction.

Table L – Construction-Related Local Criteria Pollutant Emissions

Phase	Pollutant Emissions[1] (pounds/day)			
	NOx	**CO**	**PM10**	**PM2.5**
Combined Demolition and Grading (Year 2022)[2]	40.87	24.65	3.28	1.89
Building Construction (Year 2023)	14.65	16.83	0.89	0.71
Combined Building Construction (Year 2024), Paving/Site Improvements, and Architectural Coatings	24.67	31.02	1.42	1.19
Maximum Daily Construction Emissions	**40.87**	**31.02**	**3.28**	**1.89**
SCAQMD Local Construction Thresholds[3]	**175**	**1,520**	**13**	**7**
Exceeds Threshold?	No	No	No	No

Notes:
[1] The Pollutant Emissions include 100% of the On-Site emissions (off-road equipment and fugitive dust) and 1/8 of the Off-Site emissions (on road trucks and worker vehicles), in order to account for the on-road emissions that occur within a ¼ mile of the project site.
[2] Demolition and Grading phases based on adherence to fugitive dust suppression requirements from SCAQMD Rule 403.
[3] The nearest offsite sensitive receptors are guests at the hotel located as near as 10 feet (3 meters) south of the project site. According to SCAQMD methodology, all receptors closer than 25 meters are based on the 25-meter threshold.
Source: Calculated from SCAQMD's Mass Rate Look-up Tables for two and five acres in Air Monitoring Area 3, Southwest Coastal LA County.

The data provided in Table L shows that none of the analyzed criteria pollutants would exceed the local emissions thresholds during either the combined demolition and grading, building construction, or the

combined building construction, paving/site improvement, and architectural coatings phases. Therefore, a less than significant local air quality impact would occur from construction of the proposed project.

Operational Emissions

The on-going operation of the proposed project would result in a long-term increase in air quality emissions. This increase would be due to emissions from the project-generated vehicle trips, emissions from energy usage, onsite area source emissions created from the on-going use of the proposed project, and from the proposed backup diesel generator. The following section provides an analysis of potential long-term air quality impacts due to regional air quality and local air quality impacts with the on-going operations of the proposed project.

Operations-Related Regional Criteria Pollutant Analysis

The operations-related regional criteria air quality impacts created by the proposed project have been analyzed through use of the CalEEMod model and the input parameters utilized in this analysis have been detailed in Section 8.1. The worst-case summer or winter VOC, NOx, CO, SO_2, PM10, and PM2.5 daily emissions created from the proposed project's long-term operations have been calculated and are summarized below in Table M and the CalEEMod daily emissions printouts are shown in Appendix A.

Table M – Operational Regional Criteria Pollutant Emissions

	Pollutant Emissions (pounds/day)					
Emissions Source	**VOC**	**NOx**	**CO**	**SO_2**	**PM10**	**PM2.5**
Area Sources[1]	2.45	0.03	0.14	<0.00	<0.00	<0.00
Energy Usage[2]	0.03	0.30	0.25	<0.00	0.02	0.02
Mobile Sources[3]	2.65	2.65	24.31	0.05	5.39	1.46
Backup Generator[4]	0.32	0.89	0.81	<0.00	0.05	0.05
Total Emissions	**5.45**	**3.87**	**25.51**	**0.05**	**5.47**	**1.53**
SCQAMD Operational Thresholds	**55**	**55**	**550**	**150**	**150**	**55**
Exceeds Threshold?	No	No	No	No	No	No

Notes:
[1] Area sources consist of emissions from consumer products, architectural coatings, fire pits, and landscaping equipment.
[2] Energy usage consist of emissions from natural gas usage.
[3] Mobile sources consist of emissions from vehicles and road dust.
[4] The size of the proposed backup generator has not yet been determined. This analysis is based on a 389 Horsepower diesel generator that has a cycling schedule of 30 minutes per week
Source: Calculated from CalEEMod Version 2020.4.0.

The data provided in Table M shows that none of the analyzed criteria pollutants would exceed the regional emissions thresholds. Therefore, a less than significant regional air quality impact would occur from operation of the proposed project.

Friant Ranch Case

The operations-related regional criteria air quality impacts In *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502 (also referred to as "*Friant Ranch*"), the California Supreme Court held that when an EIR concluded that when a project would have significant impacts to air quality impacts, an EIR should "make a reasonable effort to substantively connect a project's air quality impacts to likely health consequences." In order to determine compliance with this Case, the Court developed a multi-part test that includes the following:

1) The air quality discussion shall describe the specific health risks created from each criteria pollutant, including diesel particulate matter.

This Analysis details the specific health risks created from each criteria pollutant above in Section 4.1 and specifically in Table B. In addition, the specific health risks created from diesel particulate matter is detailed above in Section 2.2 of this analysis. As such, this analysis meets the part 1 requirements of the Friant Ranch Case.

2) The analysis shall identify the magnitude of the health risks created from the Project. The Ruling details how to identify the magnitude of the health risks. Specifically, on page 24 of the ruling it states "The Court of Appeal identified several ways in which the EIR could have framed the analysis so as to adequately inform the public and decision makers of possible adverse health effects. The County could have, for example, identified the Project's impact on the days of nonattainment per year."

The Friant Ranch Case found that an EIR's air quality analysis must meaningfully connect the identified air quality impacts to the human health consequences of those impacts, or meaningfully explain why that analysis cannot be provided. As noted in the Brief of Amicus Curiae by the SCAQMD in the Friant Ranch case (https://www.courts.ca.gov/documents/9-s219783-ac-south-coast-air-quality-mgt-dist-041315.pdf) (Brief), SCAQMD has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes. The SCAQMD discusses that it may be infeasible to quantify health risks caused by projects similar to the proposed Project, due to many factors. It is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). The Brief states that it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant(s)). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk, it does not necessarily mean anyone will contract cancer as a result of the Project. The Brief also cites the author of the CARB methodology, which reported that a PM2.5 methodology is not suited for small projects and may yield unreliable results. Similarly, SCAQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by NOX or VOC emissions from relatively small projects, due to photochemistry and regional model limitations. The Brief concludes, with respect to the Friant Ranch EIR, that although it may have been technically possible to plug the data into a methodology, the results would not have been reliable or meaningful.

On the other hand, for extremely large regional projects (unlike the proposed project), the SCAQMD states that it has been able to correlate potential health outcomes for very large emissions sources – as part of their rulemaking activity, specifically 6,620 pounds per day of NOx and 89,180 pounds per day of VOC were expected to result in approximately 20 premature deaths per year and 89,947 school absences due to ozone. As shown above in Table K, project-related construction activities would generate a maximum of 67.53 pounds per day of VOC and 78.57 pounds per day of NOx and as shown above in Table M, operation of the proposed project would generate 5.45 pounds per day of VOC and 3.87 pounds per day NOx. The proposed Project would not generate anywhere near these levels of 6,620 pounds per day of NOx or 89,190 pounds per day of VOC emissions. Therefore, the proposed project's emissions are not sufficiently high enough to use a regional modeling program to correlate health effects on a basin-wide level.

Notwithstanding, this analysis does evaluate the proposed project's localized impact to air quality for emissions of CO, NOX, PM10, and PM2.5 by comparing the proposed project's onsite emissions to the SCAQMD's applicable LST thresholds. As evaluated in this analysis, the proposed project would not result in emissions that exceeded the SCAQMD's LSTs. Therefore, the proposed project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NOX, PM10, and PM2.5.

Operations-Related Local Air Quality Impacts

Project-related air emissions may have the potential to exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin. The proposed project has been analyzed for the potential local CO emission impacts from the project-generated vehicular trips and from the potential local air quality impacts from on-site operations. The following analyzes the vehicular CO emissions and local impacts from on-site operations.

Local CO Hotspot Impacts from Project-Generated Vehicular Trips

CO is the pollutant of major concern along roadways because the most notable source of CO is motor vehicles. For this reason, CO concentrations are usually indicative of the local air quality generated by a roadway network and are used as an indicator of potential local air quality impacts. Local air quality impacts can be assessed by comparing future without and with project CO levels to the State and Federal CO standards of 20 ppm over one hour or 9 ppm over eight hours.

At the time of the 1993 Handbook, the Air Basin was designated nonattainment under the CAAQS and NAAQS for CO. With the turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities, CO concentrations in the Air Basin and in the state have steadily declined. In 2007, the Air Basin was designated in attainment for CO under both the CAAQS and NAAQS. SCAQMD conducted a CO hot spot analysis for attainment at the busiest intersections in Los Angeles during the peak morning and afternoon periods and did not predict a violation of CO standards[1]. Since the nearby intersections to the proposed project are much smaller with less traffic than what was analyzed by the SCAQMD, no local CO Hotspot are anticipated to be created from the proposed project and no CO Hotspot modeling was performed. Therefore, a less than significant long-term air quality impact is anticipated to local air quality with the on-going use of the proposed project.

Local Criteria Pollutant Impacts from Onsite Operations

Project-related air emissions from onsite sources such as architectural coatings, landscaping equipment, and onsite usage of natural gas appliances may have the potential to create emissions areas that exceed the State and Federal air quality standards in the project vicinity, even though these pollutant emissions may not be significant enough to create a regional impact to the Air Basin.

The local air quality emissions from onsite operations were analyzed using the SCAQMD's Mass Rate LST Look-up Tables and the methodology described in LST Methodology. The Look-up Tables were developed by the SCAQMD in order to readily determine if the daily emissions of CO, NOx, PM10, and PM2.5 from

[1] The four intersections analyzed by the SCAQMD were: Long Beach Boulevard and Imperial Highway; Wilshire Boulevard and Veteran Avenue; Sunset Boulevard and Highland Avenue; and La Cienega Boulevard and Century Boulevard. The busiest intersection evaluated (Wilshire and Veteran) had a daily traffic volume of approximately 100,000 vehicles per day with LOS E in the morning and LOS F in the evening peak hour.

the proposed project could result in a significant impact to the local air quality. Table P shows the onsite emissions from the CalEEMod model that includes area sources, energy usage, backup generator, and vehicles operating in the immediate vicinity of the project site and the calculated emissions thresholds.

Table N – Operations-Related Local Criteria Pollutant Emissions

Onsite Emission Source	Pollutant Emissions (pounds/day)			
	NOx	CO	PM10	PM2.5
Area Sources[1]	<0.00	0.16	<0.00	<0.00
Energy Usage[2]	0.92	0.78	0.07	0.07
Mobile Sources[3]	2.06	6.01	1.83	0.50
Backup Generator[4]	2.06	6.01	1.83	0.50
Total Emissions	**2.99**	**6.95**	**1.90**	**0.57**
SCAQMD Local Operational Thresholds[5]	**197**	**2,387**	**14**	**4**
Exceeds Threshold?	No	No	No	No

Notes:
[1] Area sources consist of emissions from consumer products, architectural coatings, and landscaping equipment.
[2] Energy usage consist of emissions from natural gas usage.
[3] Mobile sources based on 1/8 of the gross vehicular emissions, which is the estimated portion of vehicle emissions occurring within a quarter mile of the project site.
[4] The size of the proposed backup generator has not yet been determined. This analysis is based on a 389 Horsepower diesel generator that has a cycling schedule of 30 minutes per week
[5] The nearest offsite sensitive receptors are guests at the hotel located as near as 10 feet (3 meters) south of the project site. According to SCAQMD methodology, all receptors closer than 25 meters are based on the 25-meter threshold.
Source: Calculated from SCAQMD's Mass Rate Look-up Tables for two and five acres in Air Monitoring Area 3, Southwest Coastal LA County.

The data provided in Table P shows that the on-going operations of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 9.2. Therefore, the on-going operations of the proposed project would create a less than significant operations-related impact to local air quality due to onsite emissions and no mitigation would be required.

Therefore, the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant.

Level of Significance

Less than significant impact.

10.4 Sensitive Receptors

The proposed project would not expose sensitive receptors to substantial pollutant concentrations. The local concentrations of criteria pollutant emissions produced in the nearby vicinity of the proposed project, which may expose sensitive receptors to substantial concentrations have been calculated above in Section 10.3 for both construction and operations, which are discussed separately below. The discussion below also includes an analysis of the potential impacts from toxic air contaminant emissions.

The nearest sensitive receptors to the project site are guests at the hotel located as near as 10 feet south of the project site. The nearest residents are at the multifamily homes at the northwest corner of Holly Avenue and Indiana Street that are located as near as 1,150 feet northwest of the project site. The nearest school is El Segundo Middle School that is located as near as a half mile west of the project site.

Construction-Related Sensitive Receptor Impacts

The construction activities for the proposed project are anticipated to include demolition of an existing surface parking lot and passive open space area, grading of approximately 4 acres of the project site, building construction of the proposed office building, parking structure, surface parking lot and plaza, paving and site improvements, and application of architectural coatings. Construction activities may expose sensitive receptors to substantial pollutant concentrations of localized criteria pollutant concentrations and from toxic air contaminant emissions created from onsite construction equipment, which are described below.

Local Criteria Pollutant Impacts from Construction

The local air quality impacts from construction of the proposed project has been analyzed above in Section 10.3 and found that the construction of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 9.2. Therefore, construction of the proposed project would create a less than significant construction-related impact to local air quality and no mitigation would be required.

Toxic Air Contaminants Impacts from Construction

The greatest potential for toxic air contaminant emissions would be related to diesel particulate matter (DPM) emissions associated with heavy equipment operations during construction of the proposed project. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "individual cancer risk". "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of toxic air contaminants over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. It should be noted that the most current cancer risk assessment methodology recommends analyzing a 30 year exposure period for the nearby sensitive receptors (OEHHA, 2015).

Construction activities for the proposed project would result in the operation of diesel-powered haul trucks and off-road equipment that would operate between 270 feet and 1,000 feet from the nearest homes to the west. As detailed in Section 8.1 above, construction activities would generate up to 83 haul truck trips per day during the grading phase of construction. According to *Health Risk Assessments for Proposed Land Use Project*, prepared by CAPCOA, July 2009, recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units (TRUs). Since construction activities would generate less than the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, a less than significant TAC impact would occur from construction-related haul trucks.

As detailed in Section 8.1 there would be up to nine pieces of diesel-powered off-road equipment operating simultaneously on the project site during the combined demolition and rough grading phase. All diesel-powered powered equipment would be required to adhere to California Code of Regulations Title 13, Article 4.8, Chapter 9, Section 2449 that regulates emissions from off-road diesel equipment in California. This regulation limits idling of equipment to no more than five minutes, requires equipment operators to label each piece of equipment and provide annual reports to CARB of their fleet's usage and emissions. This regulation also requires systematic upgrading of the emission Tier level of each fleet, and currently no commercial operator is allowed to purchase Tier 0 or Tier 1 equipment and by January 2023 no commercial operator is allowed to purchase Tier 2 equipment. In addition to the purchase restrictions,

equipment operators need to meet fleet average emissions targets that become more stringent each year between years 2014 and 2023. As of January, 2019, 25 percent or more of all contractors' equipment fleets must be Tier 2 or higher. Given the relatively limited number of heavy-duty construction equipment, the varying distances that construction equipment would operate to the nearby sensitive receptors (i.e., 270 feet to 1,000 feet away from the nearest homes), and the short-term construction schedule, the proposed project would not result in a long-term (i.e., 30 or 70 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk. Therefore, no significant short-term toxic air contaminant impacts would occur during construction of the proposed project. As such, construction of the proposed project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations.

Operations-Related Sensitive Receptor Impacts

The on-going operations of the proposed project may expose sensitive receptors to substantial pollutant concentrations from the potential local air quality impacts from onsite operations and from possible toxic air contaminant impacts.

Local Criteria Pollutant Impacts from Onsite Operations

The local air quality impacts from the operation of the proposed project would occur from onsite sources such as architectural coatings, landscaping equipment, and natural gas appliances, as well as from vehicle emissions on the project site and immediate vicinity of the project site. The analysis provided above in Section 10.3 found that the operation of the proposed project would not exceed the local NOx, CO, PM10 and PM2.5 thresholds of significance discussed above in Section 9.2. Therefore, the on-going operations of the proposed project would create a less than significant operations-related impact to local air quality due to on-site emissions and no mitigation would be required.

Operations-Related Toxic Air Contaminant Impacts

Particulate matter (PM) from diesel exhaust is the predominant TAC in most areas and according to *The California Almanac of Emissions and Air Quality 2013 Edition*, prepared by CARB, about 80 percent of the outdoor TAC cancer risk is from diesel exhaust. Some chemicals in diesel exhaust, such as benzene and formaldehyde have been listed as carcinogens by State Proposition 65 and the Federal Hazardous Air Pollutants program. The proposed project would generate diesel exhaust from delivery trucks and from the backup generator, which have been analyzed separately below.

Delivery Trucks TAC Emissions

The *Health Risk Assessments for Proposed Land Use Project*, prepared by CAPCOA, July 2009, recommends that sensitive receptors should not be placed within 1,000 feet of distribution centers that generate more than 100 trucks per day or more than 40 trucks per day with transport refrigeration units (TRUs). According to the ITE Trip Generation 10th Edition Supplement, Version 2/20/20, for the ITE Land Use 710 – General Office Building, daily truck trips represent 1 percent of the overall trip generation for the proposed project. Since the Traffic Analysis (Fehr and Peers, 2022) found that the proposed project would generate 1,027 gross daily trips, this would result in 10 daily truck trips per day or 5 truck deliveries per day to the project site. Since the proposed project would generate well below the 100 trucks per day threshold that would have the potential to create a significant TAC impact at the nearby sensitive receptors as determined by CAPCOA's screening criteria, a less than significant TAC impact would occur from delivery trucks.

Backup Generator TAC Emissions

Operation of the Proposed Project would create TAC emissions from operation of a backup diesel generator. Backup generators typically cycle on for 30 minutes on a weekly basis in order to keep the engine lubricated and ready to use in case of a power outage. The typical cycling of a backup generator would operate for approximately 26 hours per year. SCAQMD Rule 1110.2 exempts emergency standby generators that operate less than 200 hours per year from obtaining an air permit. The SCAQMD has developed the operating hour exemption limits based on levels that were determined to result in the generation of inconsequential emissions from backup generators. As such, the cancer risk created from the backup generator's TAC emissions to the nearby sensitive receptors is anticipated to be negligible. Therefore, through adherence to the backup generator operating time limits detailed in Rule 1110.2, less than significant long-term toxic air contaminant impacts would occur during operation of the backup generator.

Therefore, operation of the proposed project would result in a less than significant exposure of sensitive receptors to substantial pollutant concentrations.

Level of Significance

Less than significant impact.

10.5 Odor Emissions

The proposed project would not create objectionable odors affecting a substantial number of people. Individual responses to odors are highly variable and can result in a variety of effects. Generally, the impact of an odor results from a variety of factors such as frequency, duration, offensiveness, location, and sensory perception. The frequency is a measure of how often an individual is exposed to an odor in the ambient environment. The intensity refers to an individual's or group's perception of the odor strength or concentration. The duration of an odor refers to the elapsed time over which an odor is experienced. The offensiveness of the odor is the subjective rating of the pleasantness or unpleasantness of an odor. The location accounts for the type of area in which a potentially affected person lives, works, or visits; the type of activity in which he or she is engaged; and the sensitivity of the impacted receptor.

Sensory perception has four major components: detectability, intensity, character, and hedonic tone. The detection (or threshold) of an odor is based on a panel of responses to the odor. There are two types of thresholds: the odor detection threshold and the recognition threshold. The detection threshold is the lowest concentration of an odor that will elicit a response in a percentage of the people that live and work in the immediate vicinity of the project site and is typically presented as the mean (or 50 percent of the population). The recognition threshold is the minimum concentration that is recognized as having a characteristic odor quality, this is typically represented by recognition by 50 percent of the population. The intensity refers to the perceived strength of the odor. The odor character is what the substance smells like. The hedonic tone is a judgment of the pleasantness or unpleasantness of the odor. The hedonic tone varies in subjective experience, frequency, odor character, odor intensity, and duration. Potential odor impacts have been analyzed separately for construction and operations below.

Construction-Related Odor Impacts

Potential sources that may emit odors during construction activities include the application of coatings such as asphalt pavement, paints and solvents and from emissions from diesel equipment. Standard construction requirements that limit the time of day when construction may occur as well as SCAQMD

Rule 1108 that limits VOC content in asphalt and Rule 1113 that limits the VOC content in paints and solvents would minimize odor impacts from construction. As such, the objectionable odors that may be produced during the construction process would be temporary and would not likely be noticeable for extended periods of time beyond the project site's boundaries. Through compliance with the applicable regulations that reduce odors and due to the transitory nature of construction odors, a less than significant odor impact would occur and no mitigation would be required.

Operations-Related Odor Impacts

Potential sources that may emit odors during the on-going operations of the proposed project would primarily occur from the trash storage areas. Pursuant to City regulations, permanent trash enclosures that protect trash bins from rain as well as limit air circulation would be required for the trash storage areas. Due to the distance of the nearest receptors from the project site and through compliance with SCAQMD's Rule 402 and City trash storage regulations, no significant impact related to odors would occur during the on-going operations of the proposed project. Therefore, a less than significant odor impact would occur and no mitigation would be required.

Therefore, a less than significant odor impact would occur and no mitigation would be required.

Level of Significance

Less than significant impact.

10.6 Energy Consumption

The proposed project would impact energy resources during construction and operation. Energy resources that would be potentially impacted include electricity, natural gas, and petroleum based fuel supplies and distribution systems. This analysis includes a discussion of the potential energy impacts of the proposed projects, with particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. A general definition of each of these energy resources are provided below.

Electricity, a consumptive utility, is a man-made resource. The production of electricity requires the consumption or conversion of energy resources, including water, wind, oil, gas, coal, solar, geothermal, and nuclear resources, into energy. The delivery of electricity involves a number of system components, including substations and transformers that lower transmission line power (voltage) to a level appropriate for on-site distribution and use. The electricity generated is distributed through a network of transmission and distribution lines commonly called a power grid. Conveyance of electricity through transmission lines is typically responsive to market demands. According to http://www.ecdms.energy.ca.gov/elecbycounty.aspx, in 2020, Los Angeles County consumed 65,650 Gigawatt-hours per year of electricity.

Natural gas is a combustible mixture of simple hydrocarbon compounds (primarily methane) that is used as a fuel source. Natural gas consumed in California is obtained from naturally occurring reservoirs, mainly located outside the State, and delivered through high-pressure transmission pipelines. The natural gas transportation system is a nationwide network and, therefore, resource availability is typically not an issue. Natural gas satisfies almost one-third of the State's total energy requirements and is used in electricity generation, space heating, cooking, water heating, industrial processes, and as a transportation fuel. Natural gas is measured in terms of cubic feet. According to

http://www.ecdms.energy.ca.gov/gasbycounty.aspx, in 2020, Los Angeles County consumed 2,936.68 Million Therms of natural gas.

Petroleum-based fuels currently account for a majority of the California's transportation energy sources and primarily consist of diesel and gasoline types of fuels. However, the state has been working on developing strategies to reduce petroleum use. Over the last decade California has implemented several policies, rules, and regulations to improve vehicle efficiency, increase the development and use of alternative fuels, reduce air pollutants and GHG emissions from the transportation sector, and reduce vehicle miles traveled (VMT). Accordingly, petroleum-based fuel consumption in California has declined. According to "2010-2017_A15_Results.xlsx" obtained from: https://ww2.energy.ca.gov/almanac/transportation_data/gasoline/, in 2017, 3,659 million gallons of gasoline and 300 million gallons of diesel was sold in Los Angeles County.

The following section calculates the potential energy consumption associated with the construction and operations of the proposed project and provides a determination if any energy utilized by the proposed project is wasteful, inefficient, or unnecessary consumption of energy resources.

Construction Energy

The construction activities for the proposed project are anticipated to include demolition and rough grading of the existing surface parking lot, grading and foundation construction, building renovation and construction, application of architectural coatings, and paving and site improvements. The proposed project would consume energy resources during construction in three (3) general forms:

1. Petroleum-based fuels used to power off-road construction vehicles and equipment on the Project Site, construction worker travel to and from the Project Site, as well as delivery and haul truck trips (e.g. hauling of demolition material to off-site reuse and disposal facilities);
2. Electricity associated with the conveyance of water that would be used during Project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power; and,
3. Energy used in the production of construction materials, such as asphalt, steel, concrete, pipes, and manufactured or processed materials such as lumber and glass.

Construction-Related Electricity

During construction the proposed project would consume electricity to construct the new structures and infrastructure. Electricity would be supplied to the project site by Southern California Edison (SCE) and would be obtained from the existing electrical lines on the project site. The use of electricity from existing power lines rather than temporary diesel or gasoline powered generators would minimize impacts on energy use. Electricity consumed during project construction would vary throughout the construction period based on the construction activities being performed. Various construction activities include electricity associated with the conveyance of water that would be used during project construction for dust control (supply and conveyance) and electricity to power any necessary lighting during construction, electronic equipment, or other construction activities necessitating electrical power. Such electricity demand would be temporary, nominal, and would cease upon the completion of construction. Overall, construction activities associated with the proposed project would require limited electricity consumption that would not be expected to have an adverse impact on available electricity supplies and infrastructure.

Therefore, the use of electricity during project construction would not be wasteful, inefficient, or unnecessary.

Since SCE already provides power to the project site, it is anticipated that only nominal improvements would be required to SCE distribution lines and equipment with development of the proposed project. Compliance with City's guidelines and requirements would ensure that the proposed project fulfills its responsibilities relative to infrastructure installation, coordinates any electrical infrastructure removals or relocations, and limits any impacts associated with construction of the project. Construction of the project's electrical infrastructure is not anticipated to adversely affect the electrical infrastructure serving the surrounding uses or utility system capacity.

Construction-Related Natural Gas

Construction of the proposed project typically would not involve the consumption of natural gas. Natural gas would not be supplied to support construction activities, thus there would be no demand generated by construction. Since SoCal Gas already provides natural gas to the project site, construction-related activities would be limited to installation of new natural gas connections within the project site. Development of the proposed project would not require extensive infrastructure improvements to serve the project site. Construction-related energy usage impacts associated with the installation of natural gas connections are expected to be confined to trenching in order to place the lines below surface. In addition, prior to ground disturbance, the proposed project would notify and coordinate with SoCalGas to identify the locations and depth of all existing gas lines and avoid disruption of gas service. Therefore, construction-related impacts to natural gas supply and infrastructure would be less than significant.

Construction-Related Petroleum Fuel Use

Petroleum-based fuel usage represents the highest amount of transportation energy potentially consumed during construction, which would utilized by both off-road equipment operating on the project site and on-road automobiles transporting workers to and from the project site and on-road trucks transporting equipment and supplies to the project site.

The off-road construction equipment fuel usage was calculated through use of the off-road equipment assumptions and fuel use assumptions shown above in Section 8.2, which found that the off-road equipment utilized during construction of the proposed project would consume 52,904 gallons of fuel. The on-road construction trips fuel usage was calculated through use of the construction vehicle trip assumptions and fuel use assumptions shown above in Section 8.2, which found that the on-road trips generated from construction of the proposed project would consume 40,837 gallons of fuel. As such, the combined fuel used from off-road construction equipment and on-road construction trips for the proposed project would result in the consumption of 93,742 gallons of petroleum fuel. This equates to 0.0024 percent of the gasoline and diesel consumed in the County of Los Angeles annually. As such, the construction-related petroleum use would be nominal, when compared to current petroleum usage rates.

Construction activities associated with the proposed project would be required to adhere to all State and SCAQMD regulations for off-road equipment and on-road trucks, which provide minimum fuel efficiency standards. As such, construction activities for the proposed project would not result in the wasteful, inefficient, and unnecessary consumption of energy resources. Impacts regarding transportation energy would be less than significant. Development of the proposed project would not result in the need to manufacture construction materials or create new building material facilities specifically to supply the proposed project. It is difficult to measure the energy used in the production of construction materials

such as asphalt, steel, and concrete, it is reasonable to assume that the production of building materials such as concrete, steel, etc., would employ all reasonable energy conservation practices in the interest of minimizing the cost of doing business.

Operational Energy

The on-going operation of the proposed project would require the use of energy resources for multiple purposes including, but not limited to, heating/ventilating/air conditioning (HVAC), refrigeration, lighting, appliances, and electronics. Energy would also be consumed during operations related to water usage, solid waste disposal, landscape equipment and vehicle trips.

Operations-Related Electricity

Operation of the proposed project would result in consumption of electricity at the project site. The proposed project would consume electrical energy for interior and exterior lighting, heating and cooling systems, a variety of electrical appliances and office machinery, electrical vehicle charging infrastructure, and for outdoor irrigation system controls. As detailed above in Section 8.3 the proposed project would consume 1,882,988 kilowatt-hours per year of electricity. This equates to 0.0029 percent of the electricity consumed annually in the County of Los Angeles. As such, the operations-related electricity use would be nominal, when compared to current electricity usage rates in the County.

It should be noted that, the proposed project would comply with all Federal, State, and City requirements related to the consumption of electricity, that includes CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed office building, including enhanced insulation, use of energy efficient lighting and appliances, water and space heating systems, as well as requiring a variety of other energy-efficiency measures to be incorporated into the proposed office building. Therefore, it is anticipated the proposed project will be designed and built to minimize electricity use and that existing and planned electricity capacity and electricity supplies would be sufficient to support the proposed project's electricity demand. Thus, the project would not result in the wasteful or inefficient use of electricity and no mitigation measures would be required.

Operations-Related Natural Gas

Operation of the proposed project would result in increased consumption of natural gas at the project site. As detailed above in Section 8.3 the proposed project would consume 1,087 MBTU per year of natural gas. This equates to 0.0004 percent of the natural gas consumed annually in Los Angeles County. As such, the operations-related natural gas use would be nominal, when compared to current natural gas usage rates in the County.

It should be noted that, the proposed project would comply with all Federal, State, and City requirements related to the consumption of natural gas, that includes CCR Title 24, Part 6 *Building Energy Efficiency Standards* and CCR Title 24, Part 11: *California Green Building Standards.* The CCR Title 24, Part 6 and Part 11 standards require numerous energy efficiency measures to be incorporated into the proposed project, including enhanced insulation as well as use of efficient natural gas appliances and HVAC units. Therefore, it is anticipated the proposed project will be designed and built to minimize natural gas use and that existing and planned natural gas capacity and natural gas supplies would be sufficient to support the proposed project's natural gas demand. Thus, impacts with regard to natural gas supply and infrastructure capacity would be less than significant and no mitigation measures would be required

Therefore, the proposed project would not result in the wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. Impacts would be less than significant.

Level of Significance

Less than significant impact.

10.7 Energy Plan Consistency

The proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Although the City has not adopted any specific plans that address energy efficiency, the City adopted the El Segundo CAP on December 2017, that has been prepared to help the City comply with the City's GHG emissions reduction goals through implementation of many measures that also result in energy conservation and efficiency. The City's Municipal Code, Section Chapter 11 Green Building Standards Code, requires all development projects in the City to meet the California Green Building Standards Code (CalGreen) building requirements that require the proposed project to implement various energy efficiency design features into the proposed office buildings. The CalGreen building requirements have been detailed above in Section 5.1 of this Report. As such, the proposed project would be designed to meet all applicable State building energy efficiency standards as well as to meet the City's energy efficiency standards. Therefore, the proposed project would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency. Impacts would be less than significant.

Level of Significance

Less than significant impact.

10.8 Generation of Greenhouse Gas Emissions

The proposed project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment. The proposed project would consist of the development of an office building, parking structure, surface parking lot and plaza.

The El Segundo CAP has been prepared to help the City comply with the City's GHG emissions reduction goals as well as State and federal regulations that include AB 32, SB 32, and the 2017 Climate Change Scoping Plan Update GHG emission reduction goals. The El Segundo CAP states "Within the CEQA process, a qualified CAP framework offers the ability to streamline future CEQA greenhouse gas analyses by being able to tier off the climate action plan."

In order to show consistency with the CAP, quantification of the proposed project's GHG emissions are not required. However, the proposed project's GHG emissions have been provided for informational purposes only. The project's GHG emissions have been calculated with the CalEEMod model based on the construction and operational parameters detailed above in Section 8.1. A summary of the results is shown below in Table O and the CalEEMod model run is provided in Appendix C.

Table O – Project Related Greenhouse Gas Annual Emissions

Category	Greenhouse Gas Emissions (Metric Tons per Year)			
	CO_2	CH_4	N_2O	CO_2e
Area Sources[1]	0.51	<0.00	<0.00	0.51
Energy Usage[2]	393.35	0.03	<0.00	395.42
Mobile Sources[3]	641.50	0.05	0.03	651.37
Backup Generator[4]	3.85	<0.00	<0.00	3.86
Solid Waste[5]	8.83	0.52	<0.00	21.88
Water and Wastewater[6]	53.80	0.44	0.01	67.94
Construction[7]	28.72	<0.00	<0.00	29.21
Total GHG Emissions	**1,130.55**	**1.04**	**0.04**	**1,170.19**

Notes:
[1] Area sources consist of GHG emissions from consumer products, architectural coatings, and landscaping equipment.
[2] Energy usage consists of GHG emissions from electricity and natural gas usage.
[3] Mobile sources consist of GHG emissions from vehicles.
[4] The size of the proposed backup generator has not yet been determined. This analysis is based on a 389 Horsepower diesel generator that has a cycling schedule of 30 minutes per week.
[5] Waste includes the CO_2 and CH_4 emissions created from the solid waste placed in landfills.
[6] Water includes GHG emissions from electricity used for transport of water and processing of wastewater.
[7] Construction emissions amortized over 30 years as recommended in the SCAQMD GHG Working Group on November 19, 2009.
Source: CalEEMod Version 2020.4.0.

The data provided in Table O shows that the proposed project would create 1,170.19 $MTCO_2e$ per year. It should be noted that Table O is based on current emission rates from area sources, energy usage, solid waste, water and wastewater sources. Future State regulations, including SB 100 that requires 100 percent of retail sales of electricity to be generated from zero-carbon emissions sources by 2045, which along with other regulations will result in reducing these emissions sources to near zero levels. In addition, the transportation sources only incorporate previously adopted state regulations and do not account for recent state regulations, including the anticipated reductions from Executive Order N-79-20 that requires 100 percent of new passenger vehicles sold in California to be zero-emissions by 2035. The GHG emission reduction strategies provided in the El Segundo CAP would further reduce the GHG emissions shown in Table P.

Level of Significance

Less than significant impact.

10.9 Greenhouse Gas Plan Consistency

The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing GHG emissions. The applicable plan for the proposed project would be the CAAP. The proposed project's consistency with GHG emissions reduction strategies in the CAAP is shown in Table P.

Table P – Consistency with the El Segundo CAP

Sub-Strategies	Project Consistency
Goal LUT: A – Accelerate the Market for EV Vehicles	
LUT: A1 Electric Vehicle (EV) Parking Policies	**Not Applicable**. This Strategy requires the City to consider to allow reduction of parking spaces in exchange for EV or Neighborhood Electric Vehicle (NEV) parking. The project applicant is not requesting a reduction in parking spaces.
LUT: A1.1 Offer free parking to EVs	**Not Applicable**. The project applicant is not requesting a reduction in parking spaces. However, the proposed project is providing EV parking spaces.
LUT: A1.1 Offer reduced-price EV parking	**Not Applicable**. The project applicant is not requesting a reduction in parking spaces. However, the proposed project is providing EV parking spaces.
LUT: A1.1 Lower parking minimums for developments provided EV parking	**Not Applicable**. The project applicant is not requesting a reduction in parking spaces. However, the proposed project is providing EV parking spaces.
LUT: A2 EV Charging Policies	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.1 Install level 1, 2, and DC 3 charging in city-owned parking lots	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.2 Install charging at city-owned facilities.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.3 Provide on-street level 1 and 2 charging.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A2.4 Adopt charging standards beyond CalGreen 2016 requirements.	**Not Applicable**. This action is applicable to the City to implement. However, the proposed project is required to meet CalGreen 2016 requirements.
LUT: A2.5 Create policies that encourage facility owners to provide level 1 charging.	**Not Applicable**. This action is applicable to the City to implement. However, the proposed project will include designated EV parking.
LUT: A2.6 Cooperate with regional agencies to expand charging networks.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A3 Administrative Redness	**Not Applicable**. This action is applicable to the City to implement.
LUT: A3.1 Offer online permitting to streamline the application process.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A3.2 Minimize time to complete inspection.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A3.3 Offer inspection within 24 hours of request.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A4 Public Information Projects	**Not Applicable**. This action is applicable to the City to implement.
LUT: A4.1 Publicize EV programs through a variety of media.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A5 Multi-Modal Streets Complete Streets	**Not Applicable**. This action is applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: A5.1 Publicize city charging and parking policies.	**Not Applicable**. This action is applicable to the City to implement.
LUT: A5.2 Provide signage, maps, and information for slow speed vehicles.	**Not Applicable**. This action is applicable to the City to implement.
Goal LUT: B – Encourage Ride-Sharing	
LUT: B1 Facilitate Private and Public Mobility Services (Ride-Hailing, Ride-Sharing, Car-Sharing, Bike-Sharing)	**Not Applicable**. This policy is only applicable to the City to work with private and public services to provide different types of mobility services for sharing.
LUT: B1.1 Facilitate bike-sharing.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project provides both short-term and long-term bike parking.
LUT: B1.2 Facilitate car-sharing.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project is over parked and the extra parking spaces could be used for a car-sharing use in the future.
LUT: B1.3 Facilitating ride-hailing and ride-sharing.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project is over parked and the extra parking spaces could be used for ride-hailing and ride-sharing uses in the future.
LUT: B1.4 Remove barriers to private sector bike and car-sharing.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: B1.5 Assist private sector organizations to secure funding.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: B1.6 Conduct a ride/bike sharing study or plan.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: C – Encourage Transit Usage	
LUT: C1 Provide a Bus Rapid Transit (BRT) System	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C1.1 Work with Transit Agency to implement a Bus Rapid Transit System.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C1.2 Work with Transit Agency to add additional bus rapid transit routes.	**Not Applicable**. This policy is only applicable to the City to implement
LUT: C1.3 Collaborate with neighboring cities/SBCCOG for a regional transit system.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2 Expand Transit Network	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.1 Work with Transit Agency to expand bus and rail transit network	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.2 Work with Transit Agency to improve connectivity.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.3 Collaborate with a range of agencies to expand funding for transit.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.4 Work with Transit Agency to improve transit amenities.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.5 Work with Transit Agency to better accommodate bicycles.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: C2.6 Prioritize funding around transit stations to encourage walking and biking.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.7 Implement first/last mile improvements at stations/destinations.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.8 Introduce a fixed-route transit service in the jurisdiction.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.9 Provide/expand local shuttle services.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.10 Explore programs to offer discounted transit passes.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C2.11 Fund transit services for elderly and handicap.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C3 Increase Transit Service Frequency and Speed	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: C3.1 Work with Transit Agency to increase service frequency and speed.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: D – Adopt Active Transportation Initiatives	
LUT: D1 Provide Traffic Calming Measures	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures in future developments.
LUT: D1.1 Conduct a pedestrian/bicycle study.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project will provide an onsite pedestrian and bicycle circulation system and facilities.
LUT: D1.2 Use traffic calming measures on streets where feasible.	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures on the project site.
LUT: D1.3 Implement traffic calming measures in future developments.	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures on the project site.
LUT: D1.4 Promote traffic calming measures in future developments.	**Consistent.** The proposed project meets the City's requirements to provide traffic calming measures in future developments.
LUT: D2 Provide Pedestrian/Bicycle Networks Improvements	**Consistent.** The proposed project provides an onsite pedestrian and bicycle circulation system and associated amenities.
LUT: D2.1 Provide pedestrian and bicycle networks.	**Consistent.** The proposed project does provide pedestrian and bicycle circulation.
LUT: D3 Improve Design of Development.	**Consistent.** The proposed project is an improvement over the existing uses on the project site that would result in promoting design of development.
LUT: D3.1 Amend the Bicycle and Pedestrian Master Plan.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide an onsite pedestrian and bicycle circulation system.
LUT: D3.2 Require bicycle parking through the Zoning Code or other implementation documents.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide both short term and long term bicycle parking.

Sub-Strategies	Project Consistency
LUT: D3.3 Require new developments to provide pedestrian, bicycle, and transit amenities.	**Consistent.** The proposed project would provide pedestrian and bicycle amenities.
LUT: D3.4 Amend the zoning ordinance to require shower facilities and dressing areas for new developments.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.5 Require commercial and multi-family residential projects to provide permanent bicycle parking facilities.	**Consistent.** The proposed project would provide permanent (long-term) bicycle parking locations.
LUT: D3.6 Provide short and long-term bicycle parking near key areas.	**Consistent.** The proposed project would provide both short and long-term bicycle parking on the project site.
LUT: D3.7 Develop appropriate bicycle infrastructure for high traffic intersections and corridors.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide a bicycle circulation system.
LUT: D3.8 Develop appropriate infrastructure within pedestrian sheds of key areas.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project would provide an onsite pedestrian circulation system.
LUT: D3.9 Retrofit bicycle racks and parking facilities in underserved areas.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.10 Create of bicycle lanes, routes, and shared-use paths into street systems, new subdivisions, and large developments.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project would provide an onsite pedestrian circulation system.
LUT: D3.11 Improve active transportation networks (Identify gaps/deficiencies and implement projects to address them)	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.12 Construct or improve pedestrian infrastructure around transit.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project would provide an onsite pedestrian circulation system.
LUT: D3.13 Develop active transportation networks for Transit-Oriented District station area plans.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: D3.14 Implement policies to minimize conflicts between pedestrians and motorists. Identify pedestrian collision hot spots.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: E – Parking Strategies	
LUT: E1 Limit Parking Supply	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E1.1 Create parking benefit districts which invest meter revenue in other public amenities.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E1.2 Reduce/eliminate parking minimums for new developments.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E1.3 Reduce/eliminate parking minimums for mixed-use, pedestrian, and transit-oriented developments.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E1.4 Implement parking pricing to a downtown area.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E2 Unbundle Parking Cost from Property Costs	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E2.1 Adopt a comprehensive parking policy to unbundle the true cost of providing parking.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
LUT: E2.2 Encourage developers of new development to unbundle parking and eliminate the assignment of specific stalls.	**Consistent.** The proposed project parking structure would not assign specific stalls other than for electric and clean air vehicle spaces within the public parking areas.
LUT: E3 Implement On-Street Marking Pricing	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E3.1 Implement on-street parking pricing.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E3.2 Change policies to disincentive parking within downtown.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E4 Residential Area Parking Permits	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E4.1 Institute residential parking programs.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: E4.2 Institute residential permit parking.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: F – Organizational Strategies	
LUT: F1 Encourage Telecommuting and Alternative Work Schedules	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F1.1 Encourage municipal telecommuting and alternative work schedules (voluntary)	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F1.2 Encourage local employers to implement and alternative work schedules.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2 Implement a Commute Trip Reduction Program	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.1 Establish a commute trip reduction marketing campaign.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.2 Work with local employers encouraging subsidized or discounted transit programs.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.3 Work with local employers to increase carpooling.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.4 Encourage employers to provide vanpool and shuttles from major stations.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.5 Implement a (voluntary) commute trip reduction program.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F2.6 Implement an employee education program	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F3 Provide Car-Sharing Programs	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: F3.1 Implement a car-sharing program	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: G – Land Use Strategies	
LUT: G1 Increase Density	**Consistent.** The proposed project provides higher density.
LUT: G1.1 Encourage higher density through general plan appropriately in targeted areas.	**Consistent.** The proposed project provides higher density in an area general planned appropriately.
LUT: G1.2 Encourage higher density through zoning code appropriately in targeted areas.	**Consistent.** The proposed project is consistent with zoning code for higher density.

Sub-Strategies	Project Consistency
LUT: G1.3 Increase housing density near transit.	**Consistent.** The proposed project provides housing near bus/transit routes.
LUT: G2 Increase Diversity	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.1 Update mixed-use policies in General Plan.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.2 Encourage mixed-use policies through Zoning Code.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.3 Encourage transitions from single-family to higher intensity mixed-uses.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.4 Encourage mixed-use and infill development projects in key in-fill areas.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.5 Revise development standards that act as barriers to mixed-use projects.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.6 Conduct land use/market analysis to identify sites that could support new or expanded neighborhood centers.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G2.7 Encourage new mixed-use development near transit.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G3 Increase Destination Accessibility.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G3.1 Increase destination accessibility.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4 Increase Transit Accessibility.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.1 Encourage Transit Accessibility through general plan.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.2 Encourage Transit Accessibility through zoning code.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.3 Update travel demand ordinance.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.4 Conduct a public transit gap study.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.5 Provide a shuttle service connecting areas.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G4.6 Establish commuter shuttles linking business districts with transit.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G5 Integrate Affordable and Below-Market Housing.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G5.1 Encourage policies that promote a mix of housing types.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6 Develop a NOD Plan	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6.1 Amend zoning code or general plan to encourage higher density and smaller scale "Business Establishment Density."	**Consistent.** The proposed project would result in higher density general office uses, when compared to the existing conditions.

Sub-Strategies	Project Consistency
LUT: G6.2 Establish NOD centers in zoning code.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6.3 Support higher Business Establishment Density with NOD centers.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: G6.4 Encourage business establishment mix that promote walking.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal LUT: H – Digital Technology Strategies	
LUT: H1 Collaborate on and Implement the South Bay Digital Master Plan	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: H1.1 Implement the South Bay Digital Master Plan "South Bay Net."	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: H1.2 Implement e-government initiatives.	**Not Applicable**. This policy is only applicable to the City to implement.
LUT: H1.3 Develop city-wide area networks to connect public facilities and other key buildings with each other and the South Bay Net.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: A – Increase Energy Efficiency in existing Residential Units	
EE: A1 EE Training, Education and Recognition.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.1 Post links on website/social media and provide materials at Public Events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.2 Email list for email blasts of new information or trainings.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.3 Establish an annual EE Fair.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.4 Create a resource center.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.5 Hire/Designate Energy Advocate.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A1.6 Partner with South Bay Cities Council of Governments and Utilities to obtain educational content.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A2 Increase Participation in Existing EE Programs	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A2.1 Partner with SBCCOG and Utilities for outreach events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A2.2 Staff outreach to home owners associations (HOAs) and other housing groups.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A3 Establish, Promote or Require Home Energy Evaluations.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A3.1 Promote home energy audits through programs such as Energy Upgrade California or other State programs.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A3.2 Establish free "Energy Checkup" program with the assistance of the SBCCOG if funding can be obtained.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
EE: A4 Promote, Incentivize or Require Home Energy Renovations	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.1 Promote existing incentivized programs such as Energy Upgrade California.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.2 Develop or promote a green building program.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project will be designed to meet the most current CalGreen requirements.
EE: A4.3 Promote Financing Programs such as PACE (Properly Assessed Clean Energy).	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.4 Streamline panel upgrade when it does not involve relocation.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: A4.5 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: B – Increase Energy Efficiency in New Residential Developments	
EE: B1 Increase Energy Efficiency in New Residential Developments.	**Not Applicable**. The proposed project is not new residential development.
EE: B1.1 Educate City staff, developers, etc., on future Title 24 updates and the additional energy efficiency opportunities for new residential development.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: B1.2 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: B1.3 Create an Energy award program for net-zero-net energy homes.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: C – Increase Energy Efficiency in Existing Commercial Units	
EE: C1 EE Training and Education	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.1 Post links on websites/social media and provide materials at public events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.2 Email list for e-mail blasts of new information or trainings.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.3 Establish an annual EE fair.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.4 Create a resource center.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.5 Hire/Designate Energy Advocate.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C1.6 Partner with SBCCOG and Utilities to obtain education content.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C2 Increase Participation in Existing EE Programs	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C2.1 Partner with SBCCOG and Utilities for outreach events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C2.2 Staff outreach to business groups.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C3 Incentivize or Required Non-Residential Energy Audits	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
EE: C3.1 Promote energy audits such as through Energy Upgrade California or other state programs.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4 Promote or Require Commercial Energy Retrofits	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.1 Promote existing incentivized programs such as Energy Upgrade California.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.2 Develop or promote a green building program.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.3 Promote Financing Programs such as PACE (Properly Assessed Clean Energy).	**Not Applicable**. This policy is only applicable to the City to implement.
EE: C4.4 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: D – Increase Energy Efficiency in New Commercial Developments	
EE: D Encourage or Require EE Standards Exceeding Title 24	**Consistent.** The proposed project will be designed to meet or exceed existing Title 24 requirements.
EE: D1.1 Educate City staff, developers, etc., on future Title 24 updates and the additional energy efficiency opportunities for new commercial development.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: D1.2 Establish online permitting to facilitate permit processing.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: D1.3 Create and energy award program from net-zero-net-energy businesses.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: E – Increase Energy Efficiency through Increased Water Efficiency (WE)	
EE: E1 Promote or Require Water Efficiency Through SB X7-7.	**Not Applicable**. This policy is only applicable to the City to implement. However, the project is required to meet Title 24 Part 11 related to water efficacy.
EE: E1.1 Post links on website/social media and provide materials at public events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E1.2 Email list for e-mail blasts of new information or trainings.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E1.3 Require low-irrigation landscaping.	**Consistent.** The proposed project will provide low-irrigation landscaping.
EE: E1.4 Partner with SBCCOG and WBMWD to obtain educational content.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E1.5 Partner with SBCCOG and WBMWD for outreach events.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2.1 Staff time dedicated to work with HOAs, businesses, and other groups for outreach.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2 Promoting Water Efficiency Standards Exceeding SB X7-7	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2.2 Allow recycled or grey water uses for non-municipal uses.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: E2.3 Promote rainwater rebates and demonstrations.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: F – Decrease Energy Demand through Reducing Urban Heat Island Effect	
EE: F1 Promote Tree Planting for Shading and EE	**Consistent.** The proposed project provides a landscape plan that provides trees for shading.

Sub-Strategies	Project Consistency
EE: F1.1 Encourage tree planting at plan check.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project does provide a landscape plan with planting palette.
EE: F1.2 Work with community to develop a tree-planting group.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: F1.3 Develop a city tree planting program.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: F2.1 Pass an ordinance requiring or incentivizing cool roofs.	**Not Applicable**. This policy is only applicable to the City to implement.
EE: F2.2 Pass an ordinance requiring or incentivizing cool pavements.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EE: G – Participate in Education, Outreach and Planning for Energy Efficiency	
No Sub-Strategies provided for this Goal.	
Goal EE: H – Increase Energy Efficiency in Municipal Buildings	
No Sub-Strategies provided for this Goal.	
Goal EE: I – Increase Energy Efficiency in City Infrastructure	
No Sub-Strategies provided for this Goal.	
Goal SW: A – Increase Diversion and Reduction of Residential Waste	
SW: A1.1 Educate residents about waste reduction and diversion – Provide information to residents about recycling, composting, and source reduction opportunities on the website, newsletters, or flyers.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: A2.1 Implement collection of green waste for residents – Provide a green waste collection service for residents by expanding current services that offer drop-off site at Public Works yard.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal SW: B – Increase Diversion and Reduction of Commercial Waste	
SW: B1.1 Educate businesses about waste reduction and diversion – Provide information to businesses about recycling, composting, and source reduction opportunities on the website, newsletters, or flyers.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: B2.1 Implement a Food Scrap Diversion program for businesses – Provide a food waste collection service for businesses.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: B3.1 Require food waste and recycling at special events – Before approving permits, investigate requiring special events' solid waste management plans to include food waste collection and recycling; note- waste planning is required for large venues and events under the CA law AB 2176.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal SW: C – Increase Diversion and Reduction of Overall Community Waste	
SW: C1.1 Investigate the feasibility of setting a Zero Waste goal in a Zero Waste Strategic Plan – If found feasible, develop a comprehensive Zero Waste Plan to achieve 90% diversion of waste from landfills, including strategies to divert waste and tools to track progress.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
SW: C1.2 Investigate the feasibility of setting a goal of diverting waste from landfill by (percentage to be determined when adopting a goal) – If found feasible, develop a comprehensive Waste Plan to achieve by (percentage to be determined when adopting a plan) diversion of waste from landfills, including strategies to divert waste and tools to track progress.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal SW: D – Reduce and Divert Municipal Waste	
SW: D1.1 Implement a Recycle at Work program – educate employees about the benefits of recycling and waste reduction in the work place.	**Consistent.** The proposed project will be required to meet the Cal Recycles standards related to construction and operation of the proposed project.
SW: D1.2 Reduce paper in municipal facilities – Adopt a policy to encourage paper reduction through various activities such as: Reduce margins and logos on templates, letterheads, and memos; Upload bid documents using online resources instead of printing for contractors; Require fewer or smaller-sized copies of project plans; Use electronic devices for meetings; Require double sided printing when feasible.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: D1.3 Reuse materials at municipal facilities – Adopt a policy to re-use, repair, or refurbish office furniture and equipment at a cost savings compared to purchasing new materials; And if not cost saving, re-use or redistribute office items such as supplies, computers, and furniture to community non-profit groups in order to divert from landfill.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: D1.4 Provide additional recycling in public places – Continue to install additional recycling containers in public places such as parks and streets.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: D1.5 Adopt a Municipal Purchasing Policy – Create a purchasing policy for municipal facilities to reduce purchase of disposable items, and require environmentally preferable products to be purchased when possible and reasonable.	**Not Applicable**. This policy is only applicable to the City to implement.
SW: D1.6 Demonstrate composting at a municipal facility – Investigate composting at city facilities and possibly use the compost in environmentally friendly landscaping at facilities or community gardens.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal UG: A – Increase and Maintain Urban Greening in the Community	
UG: A1.1 Establish/maintain a community garden – Create a new or maintain a current community garden.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A1.2 Promote gardening and composting – Provide resources and information regarding community gardens and composting to educate the public on how to grow organic edible plants.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A1.3 Organize tool lending program and bounty exchange – Work with community organizations or neighborhood groups to organize garden-tool lending	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
program and/or a garden bounty exchange program to encourage more community gardens.	
UG: A2.1 Promote rooftop gardens for residential and commercial buildings - Provide informational materials to contractors, homeowners and businesses about the benefits of rooftop gardens.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A3.1 Establish a local farmers market – Work with local organizations to establish farmer markets in the community.	**Not Applicable**. This policy is only applicable to the City to implement.
UG: A3.2 Promote farmers market – Promote farmers market to the community through website, newsletters, or flyers.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal UG: B – Increase and Maintain Urban Greening in Municipal Facilities	
UG: B1.1 Landscape/open space and tree maintenance – Develop a program to conserve open spaces and trees and promote the ability of such resources to remove carbon from the atmosphere.	**Not Applicable**. This policy is only applicable to the City to implement.
Goal EGS: A – Support Energy Generation and Storage in the Community	
EGS: A1.1 Investigate the feasibility of Community Choice Aggregation.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A2.1 Accelerate implementation of renewable and alternative energy based technology through permitting process (e.g. reduced permit fees, streamlined permit approval process) – City can identify and remove regulatory barriers or procedural barriers to installing alternative energy technologies in building and development codes, design guidelines, and zoning ordinances; and work with related agencies, such as fire, water, health and others that may have policies or requirements that adversely impact the development or use of renewable energy technologies.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A2.2 Encourage and support on-site installation and use of renewable and alternative energy generation systems for residential, commercial, institutional, and industrial uses.	**Not Applicable**. This policy is only applicable to the City to implement. However, the proposed project will be designed to meet Title 24 requirements related to renewable and alternative energy generation systems.
EGS: A3.1 Develop and adopt policies for generating energy from renewable and alternative sources such as solar power (includes PV and thermal), microgrids, energy storage, co-generation, wind, geothermal, biomass, and fuel cells.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A4.1 Work with investor-owned utilities or CCAs and local, regional, and state partners to identify, implement, or promote financial tools to encourage on-site alternative and renewable energy generation projects.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A4.2 Update the City's website to include links to information for renewable and alternative energy rebates, incentives, and case studies.	**Not Applicable**. This policy is only applicable to the City to implement.

Sub-Strategies	Project Consistency
EGS: A4.3 Promote community awareness to conserve energy in conjunction with using renewable and alternative energy.	**Not Applicable**. This policy is only applicable to the City to implement.
EGS: A5.1 Explore renewable and alternative energy technologies – Explore renewable and alternative energy technologies including solar photovoltaics (PV), solar thermal, microgrids, energy storage, wind, geothermal, wave/tidal, and fuel cells to increase capacity for municipal operated and owned facilities and properties, and evaluate their suitability.	**Not Applicable**. This policy is only applicable to the City to implement.

Source: City of El Segundo CAP, 2017.

As shown in Table P, with implementation of statewide regulatory requirements including the CalGreen building standards that have been codified in Chapter 11 of the Municipal Code, the proposed project would be consistent with all applicable strategies detailed in the El Segundo CAP. Therefore, implementation of the proposed project would not conflict with any applicable plan that reduces GHG emissions.

Level of Significance

Less than significant impact.

APPENDIX A

CalEEMod Model Daily Printouts

1950-1960 East Grand Avenue - Los Angeles-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1950-1960 East Grand Avenue

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	93.56	1000sqft	0.94	105,469.00	0
Enclosed Parking with Elevator	258.00	Space	0.66	103,200.00	0
Other Non-Asphalt Surfaces	70.66	1000sqft	1.62	70,660.00	0
Parking Lot	23.00	Space	0.78	9,200.00	0
Apartments High Rise	1.00	Dwelling Unit	0.00	0.00	3

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total area disturbed 4 acres

Construction Phase - Construction schedule provided by applicant

Trips and VMT - 6 vendor trucks per day added to demolition and grading phases to account for water truck emissions.

Demolition - 3,159 tons of paving debris

Grading - 8,120 cubic yards of export

Vehicle Trips - Weekday Trip Rate set to match Traffic Study

Woodstoves - 2 natural gas only firepits

1950-1960 East Grand Avenue - Los Angeles-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Water And Wastewater - Apartment set to zero water use

Solid Waste - Apartment set to zero solid waste

Construction Off-road Equipment Mitigation - Water Exposed Area 3x per day selected to account for SCAQMD Rule 403 minimum requirements

Mobile Land Use Mitigation - 0.075 mile to nearest bus stop and improve pedestrian network onsite and connecting offsite

Water Mitigation - Install low-flow fixtures and use water-efficient irrigation systems to account for Title 24 Part 11 requirements
Waste Mitigation

Waste Mitigation - 50% reduction in waste disposed selected to account for AB 341.

Stationary Sources - Emergency Generators and Fire Pumps - 1 Backup diesel generator 389 hp, 0.5 hr-day, 26 hr-yr

Other Non-Asphalt Surfaces	70.66	1000sqft	1.62	70,660.00	0
Apartments High Rise	1.00	Dwelling Unit	0.00	0.00	3

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total area disturbed 4 acres

Construction Phase - Construction schedule provided by applicant

Trips and VMT - 6 vendor trucks per day added to demolition and grading phases to account for water truck emissions.

Demolition - 3,159 tons of paving debris

Grading - 8,120 cubic yards of export

Construction Off-road Equipment Mitigation - Water Exposed Area 3x per day selected to account for SCAQMD Rule 403 minimum requirements

Vehicle Trips - Weekday Trip Rate set to match Traffic Study

1950-1960 East Grand Avenue - Los Angeles-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Woodstoves - 2 natural gas only firepits

Water And Wastewater - Apartment set to zero water use

Solid Waste - Apartment set to zero solid waste

Stationary Sources - Emergency Generators and Fire Pumps - 1 Backup diesel generator 389 hp, 0.5 hr-day, 26 hr-yr

Mobile Land Use Mitigation - 0.075 mile to nearest bus stop and improve pedestrian network onsite and connecting offsite

Water Mitigation - Install low-flow fixtures and use water-efficient irrigation systems to account for Title 24 Part 11 requirements
Waste Mitigation

Waste Mitigation - 50% reduction in waste disposed selected to account for AB 341.

APPENDIX C

CalEEMod Model Annual Printouts

1950-1960 East Grand Avenue - Los Angeles-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

1950-1960 East Grand Avenue

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	93.56	1000sqft	0.94	105,469.00	0
Enclosed Parking with Elevator	258.00	Space	0.66	103,200.00	0
Other Non-Asphalt Surfaces	70.66	1000sqft	1.62	70,660.00	0
Parking Lot	23.00	Space	0.78	9,200.00	0
Apartments High Rise	1.00	Dwelling Unit	0.00	0.00	3

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Total area disturbed 4 acres

Construction Phase - Construction schedule provided by applicant

Trips and VMT - 6 vendor trucks per day added to demolition and grading phases to account for water truck emissions.

Demolition - 3,159 tons of paving debris

Grading - 8,120 cubic yards of export

Vehicle Trips - Weekday Trip Rate set to match Traffic Study

Woodstoves - 2 natural gas only firepits

1950-1960 East Grand Avenue - Los Angeles-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Water And Wastewater - Apartment set to zero water use

Solid Waste - Apartment set to zero solid waste

Construction Off-road Equipment Mitigation - Water Exposed Area 3x per day selected to account for SCAQMD Rule 403 minimum requirements

Mobile Land Use Mitigation - 0.075 mile to nearest bus stop and improve pedestrian network onsite and connecting offsite

Water Mitigation - Install low-flow fixtures and use water-efficient irrigation systems to account for Title 24 Part 11 requirements
Waste Mitigation

Waste Mitigation - 50% reduction in waste disposed selected to account for AB 341.

Stationary Sources - Emergency Generators and Fire Pumps - 1 Backup diesel generator 389 hp, 0.5 hr-day, 26 hr-yr

RE: CULTURAL RESOURCES AND PALEONTOLOGICAL IDENTIFICATION MEMO FOR THE 1950-1960 EAST GRAND AVENUE PROJECT, CITY OF EL SEGUNDO, LOS ANGELES COUNTY, CALIFORNIA

Dear Mr. Blumenthal:

In support of the 1950-1960 East Grand Avenue Project (project), Michael Baker International staff completed a South Central Coastal Information Center (SCCIC) records search, literature and historical map review, historical society consultation, and a buried archaeological site sensitivity analysis of the project area. These efforts were completed to determine whether the project could result in significant impacts, as defined by California Environmental Quality Act (CEQA) Section 15064.5, to historical and archaeological resources. Additionally, a paleontological records search was requested from the Natural History Museum of Los Angeles County (NHMLA), and a search of online and published databases was completed to identify the paleontological sensitivity of the project area . Methods, results, and recommendations are summarized below.

PROJECT DESCRIPTION

The project includes the construction of a new 5-story commercial office building and a new 23-space surface parking lot at 1950 East Grand Avenue, and a 4-level, 258-space parking structure at 1960 East Grand Avenue. No modifications are proposed for the existing 12-story office building at 1960 East Grand Avenue or the 11-level parking structure at 1950 East Grand Avenue, with the exception of minor modifications to accommodate a pedestrian bridge connecting the third floor of the new office building to the 11-level parking structure. Although the project would replace the surface parking that currently exists north of the 11-level parking structure, the three surface parking spaces located on the eastern side of the existing office building parallel to the drive aisle would remain. A new central plaza area would be developed between the new and existing office buildings. The plaza would include outdoor seating areas with trellis structures defining the seating areas.

PROJECT AREA

The project area is identified as the boundaries of APNs 4138-007-065 and 4138-007-066 because this includes the maximum extent of ground disturbance and project activities associated with demolition, site preparation, and construction (see **Attachment 1**).

2729 Prospect Park Drive, Suite 220, Rancho Cordova, CA 95670
P: (916) 361-8384 F: (916) 361-1574

GEOLOGIC SETTING

California is divided into 11 geomorphic provinces, each defined by unique geologic and geomorphic characteristics. The project is located on the western end of the Peninsular Ranges geomorphic province. Northwest trending mountain ranges and valleys following faults branching from the San Andreas Fault distinguish the Peninsular Ranges province. The Peninsular Ranges are bound to the east by the Colorado Desert and extend north to the San Bernardino–Riverside County line (Norris and Webb 1976), west into the submarine continental shelf, and south to the California state line.

Locally, the project is within the western end of the inland portion of the actively subsiding Los Angeles Basin. This basin is bound by the Santa Monica and San Gabriel Mountains to the north, the Santa Ana Mountains to the east, and the Palos Verdes Hills to the south (Yerkes et al. 1965). The project is located in the southwestern block of the Los Angeles Basin, which was the site of initial basin deformation, and is currently dominated by folded marine strata (Hauksson 1990). The geologic units underlying the project record coastal and inland deposition during the Pleistocene Epoch (2.5 million years ago to 11,700 years ago).

The project is broadly located within the Southern California/Northern Baja Coast region and it is composed of coastal and alluvial plains, marine terraces, and low hills within an area extending over 200 miles south into Baja California. Soil mapping of the project area indicates a high degree of surficial soil disturbance as it has been mapped as Urban Land from the Marina complex with 0-5% slope. Marina complex soil are dune deposits classified as Xeropsamments, which are entisols consisting of unconsolidated sand deposits found in areas with a xeric moisture regime (NRCS 2021).

The project is located within the Los Angeles Plain ecoregion. Ecoregions denote general similarity in ecosystems and environmental resources. Moist and cool marine air greatly moderates temperatures and rainfall in the Los Angeles Plain with annual precipitation ranging from 10 to 17 inches. The ecoregion is nearly level with flat floodplains and terraces and very gently to gently sloping alluvial fans. The soil temperature regime is thermic. Hydrology has been greatly modified and channelized. The Los Angeles River drains from the San Fernando Valley and San Gabriel Mountains (Griffith et al. 2016).

A geotechnical analysis of the project area provided preliminary geotechnical recommendations for the proposed development. Existing fill soils were encountered between 2 and 22 feet in thickness; however, the site grade has been lowered several feet since the time the prior borings were drilled. As such, current analysis of prior boring logs indicates a shallow, possibly less than 1 foot, depth of disturbance beneath the surface of the proposed five-story building and three-level parking structure with underlying Pleistocene-age native soils (Wood 2020).

CULTURAL RESOURCES IDENTIFICATION METHODS

The methods and results of the SCCIC records search, literature and historical map search, historical society consultation, and buried archaeological site sensitivity analysis are presented below.

SOUTH CENTRAL COASTAL INFORMATION CENTER

SCCIC staff conducted a records search (File No. 22538.8697) of the project area and quarter-mile search radius on June 15, 2021. The SCCIC, as part of the California Historical Resources Information System, California State University, Fullerton, an affiliate of the California Office of Historic Preservation (OHP), is the official state repository of cultural resources records and reports for Los Angeles County. As part of the records search, the following federal and California inventories were reviewed:

- California Inventory of Historic Resources (OHP 1976)
- California Points of Historical Interest (OHP 1992 and updates)
- California Historical Landmarks (OHP 1996)
- Built Environment Resources Directory (OHP 2021). The directory includes the listings of the National Register of Historic Places (National Register), National Historic Landmarks, the California Register of Historical Resources (California Register), California Historical Landmarks, and California Points of Historical Interest within Los Angeles County.

No cultural resources were identified within the project area or within the quarter-mile search radius. Three cultural resource reports were previously completed within the project area; two reports were within the quarter-mile search area as identified below.

Results

The division of prehistory into temporal periods provides a framework for understanding culture change in years before present (BP). The earliest inhabitants to the Los Angeles Basin occurred in the Paleocoastal or Paleoindian Period terms, indicating proximity to the coast (Moratto 1984; Erlandson et al. 2007), and is generally dated between about 13,000 and 8,500 BP. These earliest inhabitants were highly mobile hunter-gatherers. Warren (1968) and others (Sutton and Gardner 2010) redefined the Millingstone Horizon as the Encinitas Tradition, which dates to between about 8,500 BP and 3,500 BP. Encinitas is a widespread cultural phenomenon distinguished by an abundance of manos and metates and a dearth of vertebrate faunal remains, projectile points, and mortar and pestle groundstone tools. Definitions of the Intermediate Period (3500–3000 B.P) and Late Prehistoric Period (1,500 years ago to the Mission Era in the late 18th century) continue to be employed as temporal periods as Wallace (1955) defined them, though understanding of cultural practices, technology, and migrations, among other aspects, has been thoroughly deepened (Sutton 2010).

At the beginning of the historic period, the project area is located within the ancestral territory of the Gabrieliño. No Gabrieliño villages are known to be within the vicinity of the project area. The nearest place name, *Waachnga* (McCawley 1996), is located approximately 3 miles north-northwest of the project area. This place name potentially corresponds to the location of the Gabrieliño village *Gauchn* (Kirkman 1937). The Gabrieliño are named because of their association with the Mission San Gabriel Arcángel, located approximately 20 miles northeast. Generally, their territory included all of the Los Angeles Basin, parts of the Santa Ana and Santa Monica Mountains, along the coast from Aliso Creek in the south to Topanga Canyon in the north, and San Clemente, San Nicolas, and Santa Catalina Islands. The Gabrieliño spoke a dialect of the Cupan group of the Takic language family (Bean and Smith 1978: 538-549).

The project area was once part of Rancho Sausal Redondo and is first depicted in an 1868 BLM plat map of the region. The project area remained undeveloped until 1927 when it is depicted as

being a part of agricultural development. The project area was used for agricultural purposes from at least 1928, but by 1952 agricultural development had ceased. No built features are depicted until 1971 when a small rectangular building is depicted in the northwest corner of the project area. However, by 1981, the small rectangular building is no longer extant. By 1994, the project area is depicted with the current multi-story commercial office buildings, parking lot, and plaza. (BLM 1868; Harper and Smith 2008; Historicaerials.com 2021; Metro 2011; OAC 1901; Stickel 1993; UCSB 1927, 1928, 1938, 1952, 1956, 1960, 1962, 1971, 1979; USGS 1924, 1930, 1948, 1950, 1964, 1981

BURIED SITE SENSITIVITY ANALYSIS

The soils of the project area have been heavily impacted by modern development upon the surface and in the near-surface sediments. Though the soil sits upon Holocene-age sediment, they all are mapped as Urban Land of varying complexes, including the Marina complex (NRCS 2021). Urban Land is heavily modified through the creation of fills, soil import, and construction, and is typically of low sensitivity for significant prehistoric resources.

The project area has low sensitivity for significant or potentially significant prehistoric or historic-period archaeology sites as a result of historic and modern development.

HISTORICAL SOCIETY CONSULTATION

On July 23, 2021, Michael Baker International staff emailed a letter and figures depicting the project area to the Los Angeles City Historical Society. The correspondence requested any information or concerns regarding historical resources within the project area. No response was received. See **Attachment 2.**

PALEONTOLOGICAL RESOURCES IDENTIFICATION METHODS

The records search results, literature review, and sensitivity analysis are presented below.

PALEONTOLOGICAL RECORDS SEARCHES AND LITERATURE REVIEW

The geology of the El Segundo area has been mapped by Dibblee and Minch (2007) at a scale of 1:24,000. Deposits are mapped as Old sand dunes (Qos) consisting of older surficial sediments dating to the late Pleistocene.

The climate of Southern California during the Pleistocene was cooler and moister than the modern Mediterranean climate (Lamb 1989). In contrast to the harsh, cold conditions in high latitudes near the ice sheets, Southern California experienced a relatively milder climate during the Pleistocene (Calder 1983). During this time, familiar "Ice Age" fauna, such as mammoth, mastodons, horses, camelids, and ground sloths, inhabited the area (Stock 2001).

The NHMLA completed a paleontology collection records search for locality and specimen data on June 18, 2021; see **Attachment 3**. The records search showed no previously identified fossil

localities within the project area. Six fossil localities from the same sedimentary deposits as the project area occur nearby, either at the surface or at depth, within 3 miles of the project area, as identified below.

Locality Number	Location	Formation	Taxa	Depth
LACM IP 34957-34958	El Segundo Power Generating Station; water line trench on Franklin Ave., approx. 10 ft E of Standard St. (approx. 1.2 miles W of project)	Marine Terrace, Qos Dune Sand over Qal Marine Terrace (massive, light brown to reddish-brown sand)	Invertebrates (*Tivela stultorum*)	3–20 ft. bgs.
LACM VP 3264	Los Angeles International Airport (approx. 1 mile N of project)	Unknown formation (Pleistocene sands)	Elephant family (Proboscidea)	25 ft. bgs.
LACM VP 7332	Westchester, NW of intersection of West Century Blvd. & Bellanca Ave. (approx. 2 miles NE of project)	Unknown formation (Pleistocene; silty sand)	Mammoth (*Mammuthus*)	40 ft. bgs.
LACM VP 4942	SE corner of Airport Blvd. & Manchester Ave. (approx. 2.8 miles NE of project)	Unknown formation (Pleistocene, massive sandy mudstone with scattered pieces of gravel)	Mammoth (*Mammuthus*)	16 ft. bgs.
LACM VP 3789	8734 Bellanca Ave., Westchester (approx. 2.75 miles NE of project)	Unknown (Pleistocene; pebbly grey-green to brown mud that directly overlies a gray-green fine sand)	Mammoth (*Mammuthus*)	14 ft. bgs.
LACM VP 3266	W Athens Blvd. & Menlo Ave., Athens (6 miles E of project)	Unknown formation (Pleistocene, calcareous silstone)	Uncatalogued vertebrates	15–18 ft. bgs.

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; ft. bgs., feet below ground surface

Michael Baker International conducted a supplemental investigation within 3 miles of the project site using the following online sources:

- University of California Museum of Paleontology Locality Search (UCMP Locality Search 2021)
- The Paleobiology Database (PBDB 2021)
- FAUNMAP (FAUNMAP 2021)

No additional fossil localities were identified.

PALEONTOLOGICAL RESOURCES SENSITIVITY ANALYSIS

The paleontological records search and literature review indicate that the geologic formations in the project area are known to contain paleontological localities with rare, well-preserved fossil materials that offer important information about the plant or animal and/or its evolutionary history. The project area is highly sensitive for paleontological resources within intact deposits. It is underlain with highly sensitive, Pleistocene-age old sand dune deposits (Qos) and known fossil localities are within 3 miles of the project area.

FINDINGS AND RECOMMENDATIONS

The SCCIC records search, literature and historical map review, and historical society consultation identified no historical or archaeological resources as defined by CEQA Section 15064.5(a) within the project area. Sensitivity for buried archaeological resources is low due to historical and modern development of the project area. Nonetheless, there is a potential for disturbing previously unknown archaeological resources during excavation into native soil.

The project area is highly sensitive for paleontological resources because is underlain with highly sensitive, Pleistocene-age old sand dune deposits known to have produced rare, well-preserved fossil materials within proximity to the project area. Due to the depth of ground-disturbing activities required to build multi-story structures, the project has the potential to disturb paleontological resources.

Impacts may be avoided through implementation of the following recommendations:

> **Archaeological Resources Inadvertent Discovery.** In the event that any subsurface cultural resources are encountered during earth-moving activities, it is recommended that all work within 50 feet be halted until an archaeologist can evaluate the findings and make recommendations. Prehistoric materials can include flaked-stone tools (e.g., projectile points, knives, choppers) or obsidian, chert, or quartzite toolmaking debris; culturally darkened soil (i.e., midden soil often containing heat-affected rock, ash, and charcoal, shellfish remains, and cultural materials); and stone milling equipment (e.g., mortars, pestles, handstones). Historical materials might include wood, stone, or concrete footings, walls, and other structural remains; debris-filled wells or privies; and deposits of wood, metal, glass, ceramics, and other refuse. The archaeologist may evaluate the find in accordance with federal, state, and local guidelines, including those set forth in the California Public Resources Code Section 21083.2, to assess the significance of the find and identify avoidance or other measures as appropriate. If suspected prehistoric or historical archaeological deposits are discovered during construction, all work within the immediate area of the discovery shall be redirected and the find must be evaluated by a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983).

Human Remains Inadvertent Discovery. If human remains are found, those remains would require proper treatment in accordance with State of California Health and Safety Code Sections 7050.5-7055. Specifically, Health and Safety Code Section 7050.5 describes the requirements if any human remains are discovered during excavation of a site. As required by state law, the requirements and procedures set forth in Section 5097.98 of the California Public Resources Code would be implemented, including notification of the County coroner, notification of the Native American Heritage Commission, and consultation with the individual identified by the Native American Heritage Commission to be the "most likely descendant." If human remains are found during excavation, excavation must stop in the vicinity of the find and any area that is reasonably suspected to overlie adjacent remains until the County coroner has been called out, and the remains have been investigated and appropriate recommendations have been made for the treatment and disposition of the remains.

Paleontological Monitoring. Due to substantial fossil finds in the project's vicinity and within the same geologic formation which underlies the entire project area, it is recommended that the project be monitored by a qualified professional paleontologist during excavation into native Pleistocene-age materials. In the event that paleontological resources are encountered during earth disturbance activities, all construction activities in the area of the find shall be temporarily halted and the paleontologist shall evaluate the find to determine the appropriate treatment in accordance with Society for Vertebrate Paleontology guidelines for identification, evaluation, disclosure, avoidance, recovery, and/or curation, as appropriate. Any fossils recovered during mitigation shall be deposited to an accredited and permanent scientific institution. A qualified professional paleontologist is a professional with a graduate degree in paleontology, geology, or related field, with demonstrated experience in the vertebrate, invertebrate, or botanical paleontology of California, as well as at least one year of full-time professional experience, or equivalent specialized training in paleontological research (i.e., the identification of fossil deposits, application of paleontological field and laboratory procedures and techniques, and curation of fossil specimens), and at least four months of supervised field and analytic experience in general North American paleontology.

PREPARER QUALIFICATIONS

Chris Wendt, Architectural Historian, has over 12 years of experience teaching history and English. He conducts National Register, California Register, and various local register evaluations for projects subject to CEQA and Section 106 of the National Historic Preservation Act (NHPA). For these evaluations, he conducts a variety of tasks including field survey and photographic documentation of historic-era resources, property research, writing architectural descriptions, and developing historic statements. He is deeply entrenched in issues of local history teaching and has served as the visitor services and volunteer coordinator for the Los Angeles Museum of the Holocaust and Museum of Sonoma County. He also worked with the Petaluma Historical Museum and Library and Cotati Museum and Historical Society where he conducted archival research and

aided in the identification of historical resources. He is a Secretary of the Interior Professionally Qualified historian and architectural historian.

Nicholas F. Hearth, Principal Investigator/Senior Archaeologist, is a registered professional archaeologist (#989903) and meets the Secretary of the Interior's Professional Qualification Standards for archaeology and history, and the Society for California Archaeology's professional qualification standards for Principal Investigator. Mr. Hearth has 18 years of experience in cultural resources management, including project management, personnel management, Native American consultation, archival research, laboratory analysis, ethnographic and historical research, field survey, prehistoric and historical excavation, laboratory analysis, collections management, and GIS applications. He has experience with cultural and tribal cultural resources issues as they relate to CEQA and the National Environmental Policy Act (NEPA). He directs the preparation of cultural resources technical studies compliant with CEQA and Section 106 of the NHPA, including studies documenting research, survey, testing, excavation, monitoring, and evaluation for inclusion in the National and California Registers. He has worked in California, Nevada, Utah, New Mexico, across the Midwest, throughout New England, and in four countries in Central America.

Benjamin Scherzer, Senior Paleontologist, holds a master of science degree in earth sciences from Montana State University, Bozeman. He has more than 10 years of experience in paleontological research, field surveys, fossil salvage, laboratory identification, report preparation, and curatorial experience. Mr. Scherzer is a member of the Society for Vertebrate Paleontology, Geological Society of America, Society for Sedimentary Geology, and the Paleontological Society.

Margo Nayyar, Senior Cultural Resources Manager, is a senior architectural historian with 12 years of cultural management experience in California. Her experience includes built environment surveys, evaluation of historic-era resources using guidelines outlined in the National and California Registers, and preparation of cultural resources technical studies pursuant to CEQA and Section 106 of the NHPA, including identification studies, finding of effect documents, memorandum of agreements, programmatic agreements, and Historic American Buildings Survey/Historic American Engineering Record/Historic American Landscapes Survey mitigation documentation. She prepares cultural resources sections for CEQA environmental documents, including infill checklists, initial studies, and environmental impact reports, as well as NEPA environmental documents, including environmental impact statements and environmental assessments. She also specializes in municipal preservation planning, historic preservation ordinance updates, Native American consultation, and provision of Certified Local Government training to interested local governments. She develops Survey 123 and Esri Collector applications for large-scale historic resources surveys, and authors National Register nomination packets. Ms. Nayyar meets the Secretary of the Interior's Professional Qualification Standards for history and architectural history.

Sincerely,

Chris Wendt, MA Architectural Historian	Nicholas F. Hearth, RPA Senior Archaeologist	Benjamin Scherzer, MS Senior Paleontologist

Historical Society Consultation

From:	Wendt, Chris
To:	info@lacityhistory.org
Cc:	Nayyar, Margo
Subject:	RE: Consultation for the 1950-1960 E Grand Ave Project in El Segundo, CA
Date:	Friday, July 23, 2021 2:08:00 PM
Attachments:	LA City HS_combined.pdf

To whom it may concern,

Michael Baker International is conducting a cultural resources investigation for the 1950-1960 East Grand Avenue project in El Segundo; see the attached file for a project location and description. Please notify us if your organization has any information or concerns about historic properties in the area of potential effect. This is not a request for research; it is solely a request for public input related to any concerns that the Historical Society may have. If you have any questions, please contact me at your earliest convenience at chris.wendt@mbakerintl.com or (707) 787-7488.

Sincerely,

Chris Wendt | Architectural Historian

LOS ANGELES CITY HISTORICAL SOCIETY
P.O. BOX 862311
LOS ANGELES, CA 90086-2311

RE: CONSULTATION FOR THE 1950-1960 EAST GRAND AVENUE PROJECT, EL SEGUNDO, LOS ANGELES COUNTY, CALIFORNIA

To Whom It May Concern:

Michael Baker International is conducting a cultural resources investigation for the 1950-1960 East Grand Avenue Project (project). The project is located at 1950-1960 East Grand Avenue, in the City of El Segundo, as depicted on the accompanying figures (see **Attachment 1**).

The project proposes the construction of a commercial office building located at 1950 East Grand Avenue (Assessor Parcel Number [APN]: 4138-007-065). The proposed commercial office building is to be 4-stories in height with 93,559 net square-footage and will include a mezzanine level and a new 23-space parking lot. In addition, the project proposed the construction of a 4-level parking structure with 258 spaces located at 1960 East Grand Avenue (APN: 4138-007-066). Furthermore, the project proposes landscape and hardscape improvements that include the addition of a large outdoor landscaped plaza with outdoor seating. The proposed plaza will be located between the existing 12-story office building at 1960 East Grand Avenue and the proposed 4-story office building at 1950 East Grand Avenue and which will create a cohesive pedestrian-oriented office campus.

Please notify us if your organization has any information or concerns about historical resources on the project site. This is not a request for research; it is solely a request for public input related to any concerns that the Los Angeles City Historical Society may have. If you have any questions, please contact me at your earliest convenience at chris.wendt@mbakerintl.com or (925) 949-2461.

Sincerely,

Chris Wendt

re: Paleontological resources for an office building project at 1950-1960 E Grand Ave

Dear X-person:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the office building project area as outlined on the portion of the Venice USGS topographic quadrangle map that you sent to me via e-mail on June 15, 2021. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM IP 34957-34958	El Segundo Power Generating Station; Water line trench on Franklin Ave., approx. 10 ft E of Standard St.	Marine Terrace (Late Pleistocene; massive, light brown to reddish-brown sand)	Pismo clam (*Tivela stultorum*) and other invertebrates	3 – 20 ft bgs
LACM VP 3264	Los Angeles International Airport	Unknown formation (Pleistocene sands)	Elephant family (Proboscidea)	25 ft bgs
LACM VP 7332	Westchester, NW of intersection of West Century Blvd & Bellanca Ave	Unknown formation (Pleistocene; silty sand)	Mammoth (*Mammuthus*)	40 ft bgs
LACM VP 4942	SE corner of Airport Blvd. & Manchester Ave	Unknown formation (Pleistocene, massive sandy mudstone w scattered pieces of gravel)	Mammoth (*Mammuthus*); bison (*Bison*); hare (*Lepus*)	16 ft bgs
LACM VP 3789	8734 Bellanca Avenue, Westchester	Unknown (Pleistocene; pebbly gray-green to brown mud that directly overlies a gray-green	Mammoth (*Mammuthus*)	14 ft bgs

		fine sand)		
LACM VP 3266	W Athens Blvd & Menlo Ave, Athens	Unnamed formation (Pleistocene, calcareous siltstone)	Uncatalogued vertebrates	15-18 ft bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los Angeles County ("NHMLA"). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

Proposed Development
1950 and 1960 Grand Avenue
El Segundo, California

Dear Mr. Komae:

We are pleased to submit the results of our geotechnical consultation in support of the proposed development to be constructed at 1950 and 1960 Grand Avenue in El Segundo, California. This consultation was performed in general accordance with the agreement between owner and consultant dated May 20, 2020. This report has been revised based on comments from Mr. Richard Chen of Labib Funk + Associates and Ms. Kimberly Christensen of Kimberly Christensen Consulting and our change order request dated August 12, 2020.

The scope of our services was planned based on our discussions with Mr. Robert Revzan of Artesian Realty Advisors. Mr. Revzan provided us with a description of the project and a conceptual design plan for the project dated April 15, 2020.

The results of our current geotechnical consultation and design recommendations are presented in this report. Please note that you or your representative should submit copies of this report to the appropriate governmental agencies for their review and approval prior to obtaining a building permit.

'Wood' is a trading name for John Wood Group PLC and its subsidiaries

It has been a pleasure to be of professional service to you. Please contact us if you have any questions or if we can be of further assistance.

Sincerely,

Executive Summary

We have completed our geotechnical consultation for the proposed development located at 1950 and 1960 Grand Avenue in El Segundo, California. Prior subsurface explorations, engineering analyses, and foundation design recommendations are summarized below.

The proposed project will consist of a new five-story office building and three-level parking structure. The structural details are not available at this time. However, no significant subterranean construction is planned as part of the proposed project; only minor grading and site work are anticipated.

Existing fill soils, between 2 and 2 feet in thickness, were encountered in our prior borings within the proposed development areas. The thickness of fill at each prior boring location is shown on Figure 2. It should be noted that the site grade has been lowered several feet since the time our prior borings were drilled. The fill soils consist of silty sand and sand. Deeper fill could occur between borings and in unexplored areas, particularly near where utilities and/or structures are located or were previously located. The underlying natural soils generally consist of sands with some near surface silty sands and layers of clayey silt and sandy silt below a depth of 80 feet below ground surface (bgs). Groundwater was not encountered within the maximum 101-foot depth explored at the site. The historic-high groundwater level near the site is mapped by the California Geological Survey (CGS) to be deeper than 40 feet bgs.

Based on the available geologic data, active or potentially active faults with the potential for surface fault rupture are not known to be located directly beneath or projecting toward the site. Therefore, the potential for surface rupture due to fault plane displacement propagating to the surface at the site during the design life of the building is considered low. Although the site could be subjected to strong ground shaking in the event of an earthquake, this hazard is common in Southern California and the effects of ground shaking can be mitigated by proper engineering design and construction in conformance with current building codes and engineering practices. The site is relatively level and the absence of nearby slopes precludes slope stability hazards. The site is located within the limits of the El Segundo Oil Field, therefore, there is a possibility that undocumented wells could be encountered during construction. Any well encountered would need to be properly abandoned in accordance with the current requirements of CalGEM. Additionally, the site is within an area with the potential for methane and other volatile gases to occur beneath the site. A methane investigation may be required by the City of El Segundo. The potential for other geologic hazards such as liquefaction, tsunamis, inundation, seiches, and subsidence affecting the site is considered low. We estimate that the seismically-induced settlement beneath the site will be less than 1 inch in the event of the Maximum Considered Earthquake.

Based on the prior field investigations, existing fill was encountered to depths of between approximately 5 and 12 feet bgs within the approximate footprint of the proposed five-story office building and between approximately 2 and 10 feet bgs within the footprint of the proposed three-level parking structure. Deeper fill soils could be present between the borings or elsewhere at the site. As previously stated, LCA observed the placement and compaction of fill soils during the construction of the existing buildings at the site and the placement and compaction of up to eight feet of fill soils within the property during the development of the general area in the late 1960s and early 1970s; however, all existing fill soils were not excavated prior to the placement of this fill. Furthermore, the fill that was observed and tested during placement in the late 1960s and early 1970s was compacted to at least 90% of the maximum dry density obtainable by the ASTM Designation D1557-66T method of compaction, modified to use three layers. Therefore, these fill soils were not compacted to the current standard of at least 90% of the maximum dry density obtainable by the ASTM Designation D1557

using five layers. Accordingly, the existing fill soils are not considered suitable for support of the proposed buildings or floor slabs on grade.

If all existing fill is excavated and replaced as properly compacted fill, the proposed office building and parking structure may be supported by spread/continuous footings established in the resulting properly compacted fill and/or the undisturbed natural soils and floor slabs may be supported on grade. As an alternative, the existing fill soils may be left in-place, and the proposed structures could be supported on deep foundations extending through the fill into the underlying natural soils. Deep foundations could consist of drilled cast-in-place concrete piles, driven pre-cast concrete piles, or augered cast-in-place (ACIP) concrete piles. However, driven piles may not be a desirable alternative because of the expected noise and vibration during pile driving. Recommendations for shallow foundations, drilled cast-in-place pile foundations, and ACIP pile foundations are presented in the following sections. Recommendations for driven pile foundations can be also provided, if desired.

Floor slabs should be structurally supported if it is desired to leave the existing fill in place and support the building on deep foundations.

Ideally, all existing fill should excavated and replaced as properly compacted fill for support of pavement and other exterior concrete walks and slabs on grade. However, if the risk of settlement and greater than normal maintenance is considered acceptable, the grading in these areas could be limited to scarification and compaction of the upper 6 inches of the subgrade. Where all existing fill is not excavated and replaced as properly compacted fill, the exposed subgrade should be carefully observed to identify any soft/loose areas that would require additional excavation and/or compaction.

1.0 Scope

This report provides geotechnical design information for the proposed development located at 1950 and 1960 Grand Avenue in El Segundo, California. The proposed development consists of the construction of a new five-story office building and three-level parking structure. The location of the project site is illustrated on Figure 1, Site Vicinity Map. The locations of existing buildings, our prior exploration borings, and the proposed structures are shown on Figure 2, Plot Plan.

Our predecessor firm of LeRoy Crandall and Associates (LCA) performed the original geotechnical investigation for the subject site, the results of which were submitted in a report entitled "Report of Geotechnical Investigation: Proposed Building Development; Grand Avenue Between Sepulveda, Continental, and El Segundo Boulevards, El Segundo, California; for the Nu-West Inc.; LCA Job No. ADE-81408; dated February 8, 1982" and a supplemental report dated June 22, 1984. In addition, LCA provided geotechnical observation and testing services of the compacted fill placed to grade the site and pile driving for the existing buildings. The results of the LCA geotechnical inspection were presented in a report entitled "Inspection and Testing of Compacted Fill, and Inspection of Foundation Excavations: Xerox Centre – Building 1; 1960 Grand Avenue, El Segundo, California; for the Homart Development Corporation; LCA Job No. B-85241; dated February 5, 1988" and "Soil Inspection and Testing Services: Parking Structure – Phase I; 1940 East Grand Avenue, El Segundo, California; for the Homart Development Corporation; LCA Job No. B-85241-B; dated March 10, 1988." LCA also provided geotechnical inspection and testing services during the grading for the development of the general area in 1969, 1970, and 1971. We acknowledge that we have reviewed the aforementioned reports and we concur with the data findings contained therein.

This consultation was authorized to evaluate the physical characteristics of the soils at the site of the proposed development based on the existing data available and to provide recommendations for design of foundations and minor retaining walls, for floor slab support, for hardscape and paving support, and for grading for the project. More specifically, the scope of this consultation included the following:

- Review of prior geotechnical data at the site.
- Perform surface wave measurements at the site to estimate the shear wave velocity profile beneath the site.
- Perform a limited geologic-seismic hazards evaluation.
- Recommend foundation parameters for design of foundations, including frictional resistance, passive resistance, and the anticipated total and differential settlements due to expected structural loadings.
- Provide seismic design parameters based on the current California Building Code (CBC).
- Perform a site-specific ground motion hazard analysis in accordance with requirements of the 2019 CBC and ASCE 7-16.
- Provide recommendations for subgrade preparation and floor slab support.

- Provide recommendations for design of minor retaining walls.
- Provide recommendations for earthwork, including site preparation, excavation, the placing of compacted fill, and quality control measures relating to earthwork.
- Provide preliminary findings regarding the feasibility of infiltration as a means of disposal of onsite stormwater runoff based on the soil types underlying the site.
- Provide recommendations for design of asphalt and portland cement concrete paving.

The scope of this consultation did not include the assessment of general site environmental conditions for the presence of contaminants in the soils and groundwater of the site.

Our recommendations are based on the results of the prior field explorations, laboratory tests, and appropriate engineering analyses. The results of the prior field explorations and laboratory tests are presented in Appendix A.

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable geotechnical consultants practicing in this or similar localities. No other warranty, express or implied, is made as to the professional advice included in this report. This report has been prepared for 1960 GRAND OFFICE OWNER 1, L.P. and their design consultants to be used solely in the design of the proposed development in El Segundo, California. This report has not been prepared for use by other parties, and may not contain sufficient information for purpose of other parties or other uses.

2.0 Site Conditions and Project Description

The project site was part of a former oil field. There may have been oil sumps and possibly below grade storage reservoirs that have been backfilled. The site was graded as part of the development of the general area in 1969, 1970, and 1971; this grading consisted of the placement of compacted fill. The specification for this previous grading did not require that all existing fill soils be removed prior to placing new fill. LCA inspected and tested the placement of the new fill, as requested by the developer at that time. Our records indicate that up to eight feet fill was placed during this grading period.

The site is currently occupied by a nine-level parking structure, a 12-story office building, a surface parking lot, and various landscape and hardscape features. The existing parking structure contains one to two basement levels, with a lowest finished floor elevation (FFE) established at Elevation 93, and is supported on conventional spread/continuous footings. The existing office building does not contain a basement level (lowest FFE established at Elevation 113.5) and is supported on driven 12-inch square pre-cast pre-stressed concrete piles, ranging between approximately 26 and 39 feet in length. The site currently slopes down gently to the north, with a difference in elevation of approximately 10 feet across the property. Various underground utilities cross the site.

The proposed project will consist of a new five-story office building and three-level parking structure. The structural details are not available at this time. However, no significant subterranean construction is planned as part of the proposed project; only minor grading and site work are anticipated. For the purposes of this report, we have assumed that maximum dead-plus-live column loads for the proposed office building and parking structure will be on the order of 500 kips or less.

3.0 Field Explorations and Laboratory Tests

Subsurface information at the project site was available from prior geotechnical investigations performed by our predecessor firm (LCA) that performed the original geotechnical investigation for the subject site. The prior LCA borings were drilled to depths of between 5 and 101 feet below ground surface (bgs) at the time of drilling. The boring locations from the prior investigations are illustrated on Figure 2. Details of the prior explorations and the logs of the borings are presented in Appendix A. Surface wave measurements were recently performed for us by GEOVision to estimate the shear wave velocity profile beneath the site; the results of these measurements are presented in Appendix B.

Laboratory tests were performed by LCA on selected samples to aid in the classification of the soils and to evaluate the pertinent engineering properties of the foundation soils. The following tests were performed:

- Moisture content and dry density determinations.
- Direct Shear.
- Consolidation.
- Compaction.
- California Bearing Ratio.

All testing was performed in general accordance with applicable ASTM specifications at the time of testing. Details of the prior laboratory testing program are presented in the Appendix.

4.0 Soil Conditions

Existing fill soils, between 2 and 22 feet in thickness, were encountered in our prior borings within the proposed development areas. The thickness of fill at each prior boring location is shown on Figure 2. It should be noted that the site grade has been lowered several feet since the time our prior borings were drilled. The fill soils consist of silty sand and sand. Deeper fill could occur between borings and in unexplored areas, particularly near where utilities and/or structures are located or were previously located.

The underlying natural soils generally consist of sands with some near surface silty sands and layers of clayey silt and sandy silt below a depth of 80 feet bgs.

Groundwater was not encountered within the maximum 101-foot depth explored at the site. The historic-high groundwater level near the site is mapped by the California Geological Survey (CGS) to be deeper than 40 feet bgs.

5.0 Limited Geologic-Seismic Hazards Evaluation

5.1 Geologic Setting

The site is located in the Centinela Valley, a broad plain extending from the Baldwin Hills on the north and the Palos Verdes Hills on the south. Geomorphically, it is in the coastal portion of California's Peninsular Ranges Geomorphic Province. This province extends north-westerly from Baja California into the Los Angeles Basin and westerly into the offshore area, including Santa Catalina, Santa Barbara, San Clemente, and San Nicolas islands (Yerkes et al., 1965). The Newport-Inglewood fault zone, located approximately 3.7 miles northeast of the site, is the major structural feature in the vicinity of the site.

Locally, the site is situated approximately 1 mile south of Los Angeles International Airport and approximately 2.2 miles east of the Pacific Ocean at a mean elevation of 113 feet above mean sea level (AMSL) (NAVD 88). The location of the site in relation to regional topography is shown on Figure 1, Site Vicinity Map.

5.2 Geologic Materials

According to published geologic maps and reports, the site is underlain by late to middle Pleistocene-age eolian and dune deposits (Saucedo et al., 2016; Dibblee and Minch, 2007; CDMG, 1998). Our prior geotechnical investigation drilled 24 exploratory borings within the property with total depths ranging from 5 feet to 101 feet (LeRoy Crandall and Associates, 1981, 1982 and 1984). According to these reports, the fill ranged from 2 feet to 22 feet bgs in the proposed development areas and consisted of silty sand and sand. Below the fill, the eolian and dune deposits consisted primarily of sand with some near surface silty sand and layers of clayey silt and sandy silt below a depth of 80 feet to the maximum depths explored.

The site was part of a former oil field. The site was graded as part of the development of the general area in 1969, 1970, and 1971. The specifications for this previous grading did not require removal of existing fill soils prior to placement of new compacted fill. Up to 8 feet of fill was placed during this period, which was observed and tested by our predecessor firm LeRoy Crandall and Associates. During the 1981, 1982 and 1984 investigations, a petroliferous odor was noted in several of the borings in the artificial fill at discrete depths ranging from 3 feet to 19 feet in the project area. A subsequent investigation was performed in 1986 to evaluate the petroliferous odors (LeRoy Crandall and Associates, 1986). Additional borings were drilled and soil samples were tested for the presence of hydrocarbons. The constituents analysed were below the level of detection in the samples. The report concluded that the contamination was minor and did not constitute a hazard to the environment or human health and safety (LeRoy Crandall and Associates, 1986).

5.3 Groundwater

The Site is located in the West Coast subbasin of the Coastal Plain of the Los Angeles Groundwater Basin (California Department of Water Resources [DWR], 2003). The West Coast subbasin is bounded by the Ballona Escarpment on the north, the Palos Verdes Hills on the south, the Newport-Inglewood fault zone on the east, and the Pacific Ocean on the west (DWR, 2003). In general, the subsurface is characterized by unconsolidated and semi-consolidated marine and terrestrial fluviodeltaic (alluvial) sediments deposited between Holocene and late Pliocene ages (Poland et al., 1959). Below the site, the primary water-bearing zones in order of depth, are the Old Dune Sand (ODS) aquifer, Gage aquifer, and the Silverado aquifer (DWR, 1961).

The site is approximately 1,500 feet east of the alignment of the West Coast Basin Barrier Project (WCBBP) (Intera, 2019). The WCBBP injects water into the Gage and Upper Silverado aquifers to prevent salt water intrusion. The injection creates a hydraulic mound or ridge along the line of injection wells, which influences

hydraulic gradients in the Gage and Upper Silverado Aquifers near the injection wells and can also locally influence the Old Sand Dune aquifer (upper 100 feet bgs).

Water was not encountered in our prior geotechnical explorations to the maximum drilled depth of 101 feet. According to the California Geological Survey (CGS), formerly the California Division of Mines and Geology (CDMG), the historic-high groundwater level is greater than 40 feet bgs (CDMG, 1998).

5.4 Geologic-Seismic Hazards

Surface Fault Rupture

The site is not within a currently established Alquist-Priolo Earthquake Fault Zone (A-P Zone) for surface fault rupture hazard (CGS 2020a, 2018a, 2002). An A-P Zone is an area which requires investigation to evaluate whether the potential for surface fault rupture is present near an active fault (CGS, 2018b; Bryant and Hart, 2007). An active fault is defined as a fault with surface displacement within the last 11,700 years (Holocene). The closest active fault is located approximately 3.7 miles northeast of the site for a section of the Newport-Inglewood fault zone (CGS, 2002; Jennings and Bryant, 2010). The closest A-P Zone is associated with a section of the Newport-Inglewood fault and is approximately 3.6 miles northeast of the site (CGS, 2020a and 2002).

Based on the available geologic data, active faults with the potential for surface fault rupture are not known to be located directly beneath or projecting toward the project site. Therefore, the potential for surface rupture due to fault plane displacement propagating to the surface at the project site during the design life of the proposed development is considered low.

Seismicity and Ground Shaking

The proximity of the site relative to known active faults indicates the site could be subjected to significant ground shaking caused by earthquakes. This hazard is common in Southern California and the effects of ground shaking can be mitigated by proper engineering design and construction in conformance with current building codes and engineering practices.

Liquefaction and Seismic-Induced Settlement

Liquefaction potential is greatest where the groundwater level is shallow, and submerged loose, fine sands occur within a depth of about 50 feet or less. Liquefaction potential decreases as grain size and clay and gravel content increase. As ground acceleration and shaking duration increase during an earthquake, liquefaction potential increases. According to the City of El Segundo General Plan Public Safety Element (1992) and the CGS (CGS, 2018a), the site is not within an area identified as having a potential for liquefaction. Based on the absence of groundwater in the upper 50 feet bgs beneath the site, the potential for liquefaction is considered low.

Seismically-induced settlement is often caused by loose to medium-dense granular soils densified during ground shaking. Dry and partially saturated soils as well as saturated granular soils are subject to seismic-induced settlement. Generally, differential settlements due to seismically-settlement could have adverse effects on structures. Based on our borings and our recent surface wave measurements, the site is underlain by Pleistocene-age sediments composed of dense poorly graded sand. We estimate that the seismically-induced settlement beneath the site will be less than 1 inch in the event of the Maximum Considered Earthquake.

Slope Stability

Topographically, the site is relatively level precluding any slope stability hazards. According to the CGS (2018a), the site is not within an area identified as having a potential for landslide susceptibility. Additionally, the site is not within an area identified as having a potential for earthquake-induced landslides (CGS, 2020b).

Tsunamis, Inundation, Seiches, Flooding and Subsidence

The site is at an approximate mean elevation of 113 feet AMSL. The site is not in a Tsunami Inundation Area (California Emergency Management Agency, California Geological Survey, and University of Southern California, 2009.) Therefore, tsunamis (seismic sea waves) are not considered a significant hazard at the site.

According to the City of El Segundo General Plan Public Safety Element (1992) and mapping by the California Office of Emergency of Services (CalOES, 2007), the site is not located downslope of any large bodies of water that could adversely affect the site in the event of earthquake-induced dam failures or seiches (wave oscillations in an enclosed or semi-enclosed body of water).

The site is in an area of minimal flooding potential (Zone X). Zone X, as defined by the Federal Emergency Management Agency (FEMA, 2008), is an area outside of the 0.2% annual chance flood. Therefore, the potential for flooding at the site is considered low.

The site is not within an area of known subsidence associated with fluid withdrawal (groundwater or petroleum), peat oxidation, or hydrocompaction.

Oil Wells and Methane Gas

According to the California Geologic Energy Management Division's [CalGEM, previously the California Division of Oil, Gas, and Geothermal Resources (DOGGR)] Well Finder System, the site is situated within the active El Segundo oil field. Although there are no known oil wells within the site, there are 7 known oil wells within 1,000 feet of the site (CalGEM, 2020). The wells are classified as "plugged." The closest active oil well is approximately 3,500 feet west-southwest of the site. There is a remote possibility that undocumented wells could be encountered during construction. Any well encountered would need to be properly abandoned in accordance with the current requirements of CalGEM.

Oil and gas wells are potential concerns when they seep oil or gas, are not abandoned to current regulations, or have associated surface contamination. They may also be associated with methane hazards. According to the Los Angeles County Department of Public Work's Solid Waste Information Management System (LACDPW, 2020), the site "is located within 300 feet of one or more oil or gas wells. A methane mitigation system may be required."

5.5 Geologic Conclusions

Based on the available geologic data, active or potentially active faults with the potential for surface fault rupture are not known to be located directly beneath or projecting toward the site. Therefore, the potential for surface rupture due to fault plane displacement propagating to the surface at the site during the design life of the building is considered low.

Although the site could be subjected to strong ground shaking in the event of an earthquake, this hazard is common in Southern California and the effects of ground shaking can be mitigated by proper engineering design and construction in conformance with current building codes and engineering practices.

The site is relatively level and the absence of nearby slopes precludes slope stability hazards. The site is located within the limits of the El Segundo Oil Field, therefore, there is a possibility that undocumented wells could be encountered during construction. Any well encountered would need to be properly abandoned in accordance with the current requirements of CalGEM. Additionally, the site is within an area with the potential for methane and other volatile gases to occur beneath the site. A methane investigation may be required by the City of El Segundo. The potential for other geologic hazards such as liquefaction, tsunamis, inundation, seiches, and subsidence affecting the site is considered low. We estimate that the seismically-induced settlement beneath the site will be less than 1 inch in the event of the Maximum Considered Earthquake.

6.0 Recommendations

6.1 General

Based on the prior field investigations, existing fill were encountered to depth of between approximately 5 and 12 feet bgs within the approximate footprint of the proposed five-story office building and between approximately 2 and 10 feet bgs within the footprint of the proposed three-level parking structure. Deeper fill soils could be present between the borings or elsewhere at the site. As previously stated, LCA observed the placement and compaction of fill soils during the construction of the existing buildings at the site and the placement and compaction of up to eight feet of fill soils within the property during the development of the general area in the late 1960s and early 1970s; however, all existing fill soils were not excavated prior to the placement of this fill. Furthermore, the fill that was observed and tested during placement in the late 1960s and early 1970s was compacted to at least 90% of the maximum dry density obtainable by the ASTM Designation D1557-66T method of compaction, modified to use three layers. Therefore, these fill soils were not compacted to the current standard of at least 90% of the maximum dry density obtainable by the ASTM Designation D1557 using five layers. Accordingly, the existing fill soils are not considered suitable for support of the proposed buildings or floor slabs on grade.

If all existing fill is excavated and replaced as properly compacted fill, the proposed office building and parking structure may be supported by spread/continuous footings established in the resulting properly compacted fill and/or the undisturbed natural soils and floor slabs may be supported on grade. As an alternative, the existing fill soils may be left in-place, and the proposed structures could be supported on deep foundations extending through the fill into the underlying natural soils. Deep foundations could consist of drilled cast-in-place concrete piles, driven pre-cast concrete piles, or augered cast-in-place (ACIP) concrete piles. However, driven piles may not be a desirable alternative because of the expected noise and vibration during pile driving. Recommendations for shallow foundations, drilled cast-in-place pile foundations, and ACIP pile foundations are presented in the following sections. Recommendations for driven pile foundations can be also provided, if desired.

Floor slabs should be structurally supported if it is desired to leave the existing fill in place and support the building on deep foundations.

Ideally, all existing fill should excavated and replaced as properly compacted fill for support of pavement and other exterior concrete walks and slabs on grade. However, if the risk of settlement and greater than normal maintenance is considered acceptable, the grading in these areas could be limited to scarification and compaction of the upper 6 inches of the subgrade. Where all existing fill is not excavated and replaced as properly compacted fill, the exposed subgrade should be carefully observed to identify any soft/loose areas that would require additional excavation and/or compaction.

6.2 Foundations

6.2.1 Shallow Foundations

Bearing Value and Settlement

If all of the existing fill soils are excavated and replaced as properly compacted fill, spread/continuous footings established in properly compacted fill and/or undisturbed natural soils and at least 2 feet below the lowest adjacent grade or floor level may be designed to impose an allowable net dead-plus-live load bearing pressure corresponding to the column loads and tolerable settlements presented on Figure 3, with a maximum value of 8,000 pounds per square foot. The estimated settlements for the range of anticipated dead-plus-live loads are presented on Figure 3. Differential settlement will depend on the distribution of structural loads and can be

determined between individual columns using the values provided on Figure 3. Where higher settlement values can be tolerated, higher bearing values may be used, as shown on Figure 3. We anticipate that the majority of the estimated settlements will occur relatively quickly after the structural loads are applied.

The footing excavations should be deepened as necessary to extend into satisfactory soils. A one-third increase in the allowable bearing values may be used for wind or seismic loads. The recommended bearing values are net values, and the weight of concrete in the footings may be taken as 50 pounds per cubic foot; the weight of soil backfill may be neglected when determining the downward loads.

While the actual bearing value and settlement of compacted fill will depend on the materials used and the compaction methods employed, the quoted bearing values and settlements will be applicable if the on-site soils are used and are compacted as recommended. The bearing value of the compacted fill should be confirmed during grading.

Lateral Resistance

Lateral loads may be resisted by soil friction and by the passive resistance of the soils. A coefficient of friction of 0.4 may be used between the footings and the floor slab and the supporting undisturbed natural soils or properly compacted fill soils. The passive resistance of the undisturbed natural soils and/or properly compacted fill may be assumed to be equal to the pressure developed by a fluid with a density of 300 pounds per cubic foot. A one third increase in the passive values may be used when considering wind or seismic loads. The passive resistance and the frictional resistance of the soils may be combined without reduction in determining the total lateral resistance.

Ultimate Values

The recommended bearing and lateral load design values are for use with loadings determined by a conventional working stress design. When considering an ultimate design approach, the recommended design values may be multiplied by the following factors:

Design Item	Ultimate Design Factor
Bearing Value	3.0
Coefficient of Friction	1.5
Passive Resistance	1.5

In no event, however, shall foundation sizes be less than those required to support dead-plus-live loads when using the working stress design method.

6.2.2 Drilled Cast-In-Place Concrete Piles

Axial Capacities

The allowable downward and upward capacities of 18-, 24-, and 30-inch-diameter drilled cast-in-place concrete piles as a function of penetration into natural soils are presented on Figure 4. The pile capacities shown on Figure 4 are dead-plus-live load capacities; a one-third increase may be used for wind or seismic loads. The capacities presented are based on the strength of the soils; the compressive and tensile strength of the pile sections should be checked to verify the structural capacity of the piles. Piles in groups should be spaced at least

3 pile diameters on centers. If the piles are so spaced, no reduction in the axial capacities need be considered due to group action.

Settlement

We estimate the settlement of the proposed office building and parking structure, supported on drilled cast-in-place concrete piles in the manner recommended, to be less than ½ inch. The differential settlement between adjacent columns is estimated to be less than ¼ inch.

Lateral Loads

Lateral loads may be resisted by the piles and by the passive resistance of the soils against pile caps. We have computed the lateral capacities of the piles using the computer program LPILE by ENSOFT, Inc. The resistance of the soils adjacent to 18-, 24-, and 30-inch-diameter drilled or ACIP concrete piles are shown in the following tables for top of pile deflections of ¼ and ½ inch. These resistances have been calculated assuming both free and fixed-head pile conditions. The lateral resistance of other sizes of piles may be assumed to be proportional to the pile diameter. The piles should be long enough to reach the depths to zero moment presented in the following tables.

Lateral Load Design Data
18-inch-diameter Drilled or ACIP Pile

	Pile Head Deflection (inches)			
	¼		½	
Pile Head Condition	**Free**	**Fixed**	**Free**	**Fixed**
Lateral Load (kips)	10	30	19	59
Maximum Moment (inch-kips)	550	1,710	1,100	3,340
Depth to Maximum Moment (ft)	8	0	8	0
Depth to Zero Moment (ft)	24½	25½	24½	25½

Lateral Load Design Data
24-inch-diameter Drilled or ACIP Pile

	Pile Head Deflection (inches)			
	¼		½	
Pile Head Condition	**Free**	**Fixed**	**Free**	**Fixed**
Lateral Load (kips)	18	59	37	115
Maximum Moment (inch-kips)	1,340	3,940	2,650	7,700
Depth to Maximum Moment (ft)	8½	0	8½	0
Depth to Zero Moment (ft)	30	31½	30	31½

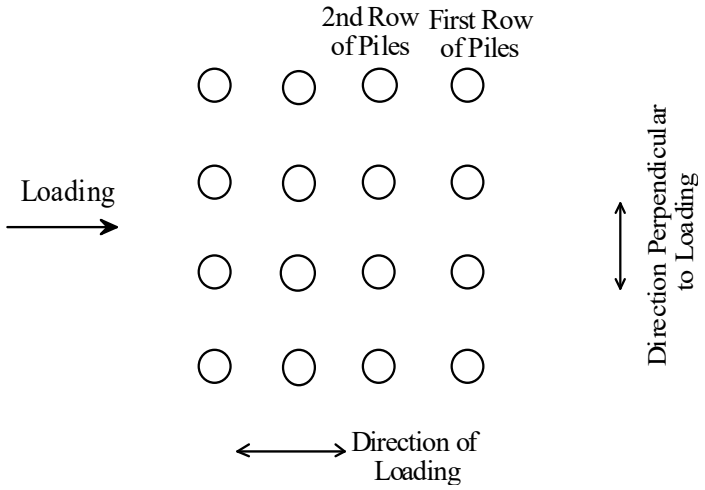
Lateral Load Design Data
30-inch-diameter Drilled or ACIP Pile

	Pile Head Deflection (inches)			
	¼		½	
Pile Head Condition	**Free**	**Fixed**	**Free**	**Fixed**
Lateral Load (kips)	31	99	61	189
Maximum Moment (inch-kips)	2,570	7,510	5,060	14,460
Depth to Maximum Moment (ft)	9	0	9	0

Depth to Zero Moment (ft)	35	37	35½	37

By: LH 5/28/20 Checked: EJJ 5/29/20

For piles in groups spaced as shown below and at least 3 pile diameters on centers, no reduction in the lateral capacities need be considered for the first (leading) row of piles in the direction perpendicular to loading. For subsequent rows in the direction of loading, piles in groups spaced closer than 8 pile diameters on centers will have a reduction in lateral capacity due to group effects. Therefore, the lateral capacity of piles in groups, except for the first row of piles, spaced at 3 pile diameters on centers, may be assumed to be reduced by half. The reduction of lateral capacity in the direction of loading for other pile spacing may be interpolated.



Lateral loads may be resisted by the piles and the passive resistance of the soils against pile caps. The resistance of the piles and the passive resistance of the soils against pile caps and grade beams may be combined without reduction in determining the total lateral resistance. The passive resistance of the existing fill soils against pile caps and grade beams may be assumed to be equal to the pressure developed by a fluid with a density of 210 pounds per cubic foot. A one-third increase in the passive value may be used for wind or seismic loads.

Drilled Pile Installation

Based on the results of our prior borings, caving in the sandy soils should be anticipated and special provisions to prevent caving of shaft side walls during construction may be required. Special drilling provisions include, but are not limited to, reduced drilling speed and the use of casing and/or drilling mud. As some caving and raveling may occur during installation, piles spaced less than five diameters on center should be drilled and filled alternately, with the concrete permitted to set at least 24 hours before drilling an adjacent hole. Pile excavations should be filled with concrete as soon after drilling and inspection as possible; the holes should not be left open overnight.

Only competent drilling contractors with experience in the installation of drilled cast-in-place piles in similar soil and groundwater conditions should be considered for the pile construction. We suggest requesting the piling contractor to submit a list of similar projects along with references for each project.

As geotechnical engineer of record (GEOR), we should observe the drilling of the pile excavations and the placing of the concrete continuously to verify that the desired diameter and depth of piles are achieved.

6.2.3 Augered Cast-In-Place (ACIP) Concrete Piles

Axial Capacities

The allowable downward and upward capacities of 18-, 24-, and 30-inch-diameter ACIP piles as a function of penetration into natural soils are presented on Figures 5.1 and 5.2. The pile capacities shown on Figures 5.1 and 5.2 are dead-plus-live load capacities; a one-third increase may be used for wind or seismic loads. The capacities presented are based on the strength of the soils; the compressive and tensile strength of the pile sections should be checked to verify the structural capacity of the piles. Piles in groups should be spaced at least 3 pile diameters on centers. If the piles are so spaced, no reduction in the axial capacities need be considered due to group action.

ACIP piles are considered to be specialized foundation system and are typically designed and installed by specialty contractors under a design-build contract. The axial capacities provided herein are to assist you in obtaining a preliminary cost for the ACIP piles. The axial and lateral capacities of the piles should be evaluated by the contractor.

Settlement

We estimate the settlement of the proposed office building and parking structure supported on ACIP concrete piles in the manner recommended, to be less than ½ inch. The differential settlement between adjacent columns is estimated to be less than ¼ inch.

Lateral Loads

Lateral loads recommended in the Section 6.2.2 are also applicable for ACIP concrete piles.

Pile Installation

Adjacent piles with a spacing of less than five diameters on center should be drilled and filled alternately, with the concrete permitted to set at least 24 hours, before drilling an adjacent hole.

The grout/concrete should be pumped under pressure as the auger is withdrawn at a slow and uniform rate. The volume of grout/concrete pumped should be measured and compared to the design volume for each pile. Reinforcement should be installed as soon after the auger has been withdrawn as possible. Based on our experience, some difficulty may be encountered while placing the reinforcing steel for longer piles, particularly due to the relatively dry sandy nature of some of the soil deposits beneath the site, which may absorb water from the grout/concrete causing a faster set, unless special considerations are made in the grout/concrete mix design.

Only competent drilling contractors with experience in the installation of ACIP piles in similar soil and groundwater conditions should be considered for the pile construction. We suggest requesting the piling contractor to submit a list of similar projects along with references for each project.

The installation and testing of the ACIP piles should be observed by our personnel to verify that the desired diameter, depth, and capacity of the piles are achieved.

Pile Testing

The design capacity of the ACIP piles should be verified by performing conventional static load tests or high strain dynamic load test in accordance with applicable ASTM guidelines. At least two pre-production piles at the 5-story building and two pre-production piles at the parking structure should be load tested to verify design capacities and installation procedures. Some form of integrity testing, such as sonic echo testing, nuclear logging (gamma-gamma logging), crosshole sonic logging, or thermal integrity profiling should be performed on the pre-production ACIP piles to identify any anomalies within the piles (inclusion of soil or voids).

6.3 Site-Specific Ground Motion Hazard Analysis

6.3.1 Mapped Seismic Design Parameters

We have determined the seismic parameters in accordance with the Section 1613 of the 2019 edition of the CBC and Section 11.4 of ASCE 7-16 Standard using the Office of Statewide Health Planning and Development (OSHPD), Seismic Design Maps Web Application. The shear wave velocities of the materials beneath the site were measured using multichannel analysis of surface waves (MASW) and passive array techniques as described in Appendix B (GEOVision, 2020). The time-averaged shear wave velocity in the 30 meters (V_{S30}) beneath the ground surface at the site is 333 meters per second. The California Building Code (CBC) Site Class was determined to be site class "D" based on the computed V_{S30}. The mapped seismic parameters may be taken as presented in Table 1.

6.3.2 Site-Specific Ground Motion Hazard Analysis

In addition to the Code Spectra parameters presented in Table 1, we have performed a site-specific ground motion hazard analysis in accordance with Chapter 21 of ASCE 7-16 to obtain site-specific seismic design acceleration parameters, the risk-targeted maximum considered earthquake response spectrum, and the design earthquake response spectrum.

Site Conditions

In addition to V_{S30}, site information necessary for the analysis includes the depth to shear wave velocities of 1,000 meters per second ($Z_{1.0}$) and 2,500 meters per second ($Z_{2.5}$), which were computed as 750 meters and 3.75 kilometers, respectively, based on the Southern California Earthquake Center's Community Shear Wave Velocity Model, Version 4.26 (SCEC-CVM-S4.26) (Graves and Pitarka, 2014).

Ground Motion Models

The ergodic ground motion models (GMMs) selected for use in this analysis were those developed for the Pacific Earthquake Engineering Research Center (PEER) Next Generation Attenuation (NGA) West 2 project. Four of the five GMMs - Abrahamson et al. (2014), Boore et al. (2014), Campbell and Bozorgnia (2014), and Chiou and Youngs (2014) were used; an equal weighting of 0.25 was used for each of these GMMs. The fifth NGA West 2 GMM (Idriss, 2014) was not used because the model is only based on data from "quasi-linear sites" where V_{S30} is greater than 450 meters per second and, therefore, is not applicable at this site. The GMMs provide ergodic median component ground motion (RotD50) estimates as a function of the V_{S30}, $Z_{1.0}$ and $Z_{2.5}$.

Ground Motion Hazard Analysis

We performed a Probabilistic Seismic Hazard Analysis (PSHA) and a Deterministic Seismic Hazard Analysis (DSHA) using the computer programs OpenSHA (Field et al., 2003) and EZ-Frisk (Risk Engineering, 2015), respectively, to develop the site-specific response spectra in accordance with ASCE 7-16 for the site.

The site-specific probabilistic response spectra were developed using the OpenSHA program. An average of Fault Models 3.1 and 3.2 from the Third Uniform California Earthquake Rupture Forecast (UCERF3) was used as the earthquake rupture forecast model for the PSHA (Field et al., 2013). In addition to known fault sources, background seismicity was also included in the PSHA. The site-specific deterministic response spectrum was computed as the maximum of the 84th percentile at each spectral ordinate computed using the USGS 2008 California fault model. The deterministic spectrum is controlled by the Newport-Inglewood fault for spectral periods less than 2 seconds and by the Palos Verdes fault for spectral periods 2 seconds and greater.

The computed 5%-damped probabilistic and deterministic median ground motions were converted from RotD50 to maximum component response direction ground motions (RotD100) using the scaling factors recommended in Shahi-Baker (Shahi and Baker, 2014), as presented in Table 2 and on Figure C-1. In accordance with Section 21.2.1 of ASCE 7-16, the probabilistic risk-targeted response spectrum (MCE_R) was taken as the maximum direction response spectrum with a 2% probability of being exceeded in 50 years multiplied by the risk coefficients C_{RS} and C_{R1} to achieve a 1% probability of collapse within a 50-year period. In accordance with Section 21.2.2 of Chapter 21 of ASCE 7-16, the deterministic MCE response spectrum was taken as the largest of the maximum direction response spectrum of the compiled 84th percentile deterministic events and the deterministic lower limit at each spectral period as shown in Table 3 and on Figure C-2. The risk-targeted probabilistic response spectrum is also presented in Table 2 and on Figure C-2. The risk-targeted coefficients, C_{RS} and C_{R1}, were taken from Figures 22-18 and 22-19 in ASCE 7-16. The C_{RS} and C_{R1} values were computed as 0.905 and 0.9, respectively, for the site. The risk-targeted coefficients were applied to spectral periods as C_{RS} for periods less than or equal to 0.2 second, linear interpolation was used between C_{RS} and C_{R1} between 0.2 and 1 second and taken as C_{R1} for periods greater than 1 second.

In accordance with Section 21.2.3 of Chapter 21 of ASCE 7-16, the site-specific MCE_R response spectrum was taken as the minimum of the deterministic MCE_R and probabilistic MCE_R response spectra and as never less than 80% of the code-based MCE_R, computed per Section 11.4.7 of ASCE 7-16, at each spectral period, as shown in Table 4 and on Figure C-3.

In accordance with Chapter 21.3 of ASCE 7-16, the site-specific design earthquake response spectrum was taken as the lesser of two-thirds of the site-specific MCE_R and 80% of the design response spectrum computed per Section 11.4.6 of ASCE 7-16 as presented in Table 5 and on Figure C-4. The final site-specific MCE_R and design earthquake response spectra are presented in Figure 6.

The site-specific design acceleration parameters were determined in accordance with Chapter 21.4 of ASCE 7-16. The parameter S_{DS} is taken as 90% of the maximum spectral acceleration obtained from the site-specific spectrum within the oscillator period range 0.2 to 5 seconds. S_{D1} is taken as the maximum value of the product of the oscillator period and the spectra acceleration for oscillator periods from 1 to 5 seconds. S_{MS} and S_{M1} are taken as 1.5 times S_{DS} and S_{D1}, respectively. The site-specific values are presented in Table 1.

6.4 Floor Slab Support

The subgrade for floor slabs supported on grade should be prepared as recommended in the Grading section of this report.

Construction activities and exposure to the environment can cause deterioration of the prepared subgrade. Therefore, we recommend that our field representative observe the condition of the final subgrade soils

immediately prior to slab-on-grade construction, and, if necessary, perform further density and moisture content tests to determine the suitability of the final prepared subgrade.

Where vinyl or other moisture-sensitive floor covering is planned (for both slabs on grade and structurally supported ground floor slabs), we recommend that the floor slabs in those areas be underlain by a capillary break consisting of a vapor-retarding membrane over a 4-inch-thick layer of gravel. A 2-inch-thick layer of sand should be placed between the gravel and the membrane to decrease the possibility of damage to the membrane. We suggest the following gradation for the gravel:

Sieve Size	Percent Passing
¾″	90–100
No. 4	0–10
No. 100	0–3

A low-slump concrete should be used to minimize possible curling of the slabs. A 2-inch-thick layer of coarse sand should be placed over the vapor retarding membrane to reduce slab curling. If this sand bedding is used, care should be taken during the placement of the concrete to prevent displacement of the sand. Concrete slabs should be allowed to cure properly before placing vinyl or other moisture-sensitive floor covering.

6.5 Minor Retaining Walls

6.5.1 Lateral Pressures

For design of minor cantilevered retaining walls, where the surface of the backfill is level, it may be assumed that drained soils will exert a lateral pressure equal to that developed by a fluid with a density of 30 pounds per cubic foot.

For the design of minor braced walls below grade, such as elevator pit walls, where the surface of the backfill is level, it may be assumed that drained soils will exert a lateral pressure equal to that developed by a fluid with a density of 60 pounds per cubic foot.

In addition to the recommended earth pressures, walls adjacent to areas subject to vehicular traffic should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot surcharge behind the walls due to normal vehicular traffic. If the traffic is kept back at least 10 feet from the walls, the traffic surcharge may be neglected.

For minor retaining walls, which are anticipated to be less than 6 feet in height, the seismic lateral earth pressure will be negligible.

6.5.3 Drainage

Minor retaining walls and other minor walls, such as elevator pit walls, should be designed to resist hydrostatic pressures or be provided with drainage or weepholes. In either case, the retaining walls should be waterproofed.

For minor retaining walls, the drainage could consist of a 4-inch-diameter perforated pipe placed with the perforations down at the base of the wall. The pipe should be sloped at least 2 inches in 100 feet and surrounded by at least 4 inches of ¾-inch crushed rock or gravel separated from the adjacent soils by an appropriate filter fabric. The crushed rock or gravel should have less than 5% passing a No. 200 sieve.

6.6 Paving

To provide support for paving, the subgrade soils should be prepared as recommended in the following section on grading. Compaction of the subgrade, including trench backfills, to at least 90%, and achieving a firm, hard, and unyielding surface will be important for paving support. The preparation of the paving area subgrade should be performed immediately prior to placement of the base course. Proper drainage of the paved areas should be provided since this will reduce moisture infiltration into the subgrade and increase the life of the paving.

The paving thicknesses are based on the results of our previous California Bearing Ratio (CBR) tests, which indicated values of 8 and 17 at 90% compaction.

6.6.1 Asphalt Concrete Paving

The required paving and base thicknesses will depend on the expected wheel loads and volume of traffic (Traffic Index or TI). Assuming that the paving subgrade is prepared as recommended in the following section on grading, the minimum recommended paving thicknesses are presented in the following table.

Assumed Traffic Index	Asphalt Concrete (Inches)	Base Course (Inches)
4 (Automobile Parking)	3	4
5 (Driveways with Light Truck Traffic)	3	4
6 (Driveways with Heavy Truck Traffic)	4	4

The asphalt paving sections were determined using the Caltrans design method. We can determine the recommended paving and base course thicknesses for other Traffic Indices if required. Careful inspection is recommended to verify that the recommended thicknesses or greater are achieved, and that proper construction procedures are followed.

6.6.2 Portland Cement Concrete Paving

Portland cement concrete paving sections were determined in accordance with procedures developed by the Portland Cement Association. Concrete paving sections for a range of Traffic Indices are presented in the following table. We have assumed that the portland cement concrete will have a compressive strength of at least 3,000 pounds per square inch.

Assumed Traffic Index	Concrete Paving (Inches)	Base Course (Inches)
4 (Automobile Parking)	6½	4
5 (Driveways with Light Truck Traffic)	7	4
6 (Driveways with Heavy Truck Traffic)	7½	4

The paving should be provided with joints at regular intervals no more than 15 feet in each direction. Load transfer devices, such as dowels or keys, are recommended at joints in the paving to reduce possible offsets. The paving sections in the above table have been developed based on the strength of unreinforced concrete. Steel reinforcing may be added to the paving to reduce cracking and to prolong the life of the paving.

6.6.3 Base Course

The base course for both asphaltic and concrete paving should meet the specifications for Class 2 Aggregate Base as defined in Section 26 of the latest edition of the State of California, Department of Transportation, Standard Specifications. Alternatively, the base course could meet the specifications for untreated base as defined in Section 200-2 of the latest edition of the Standard Specifications for Public Works Construction. The base course should be compacted to at least 95%.

6.7 Grading

The existing fill soils are not considered suitable for support of the proposed buildings or floor slabs on grade. For structures supported on deep foundations, the existing fill soils may be left in-place. For structures supported on conventional spread/continuous footings with slabs supported on grade, all existing fill should be excavated and replaced as properly compacted fill.

Ideally, all existing fill should excavated and replaced as properly compacted fill for support of pavement and other exterior concrete walks and slabs on grade. However, if the risk of settlement and greater than normal maintenance is considered acceptable, the grading in these areas could be limited to scarification and compaction of the upper 6 inches of the subgrade. Where all existing fill is not excavated and replaced as properly compacted fill, the exposed subgrade should be carefully observed to identify any soft/loose areas that would require additional excavation and/or compaction.

The excavation of existing fill and the replacement as properly compacted fill should extend laterally beyond foundation a distance equal to the depth of removal beneath the foundations. The excavation need not extend laterally beyond floor slabs, pavement, or other exterior concrete walks and slabs on grade.

The on-site soils are considered suitable for use as compacted fill after removal of deleterious materials, such as debris or organic matter. All required fill should be uniformly well compacted and observed and tested during placement.

6.7.1 Site Preparation

After the site is cleared and existing fill soils are excavated from the building area where recommended, the exposed soils should be carefully observed for the removal of all unsuitable deposits. Next, the exposed soils should be scarified to a depth of 6 inches, brought to near-optimum moisture content, and rolled with heavy compaction equipment. The upper 6 inches of the exposed soils should be compacted to at least 90% of the maximum dry density obtainable by the ASTM Designation D1557 method of compaction (95% within building areas).

6.7.2 Excavation and Temporary Slopes

Where excavations are deeper than about 4 feet, the sides of the excavations should be sloped back at 1:1 (horizontal to vertical) or shored for safety. Unshored excavations should not extend below a plane drawn at 1½ :1 (horizontal to vertical) extending downward from adjacent existing footings. Alternatively, vertical excavation may be supported by properly designed shoring. We would be pleased to present data for design of shoring if required.

Excavations should be observed by personnel of our firm so that any necessary modifications based on variations in the soil conditions can be made. All applicable safety requirements and regulations, including OSHA regulations, should be met.

6.7.3 Compaction

Any required fill soils should be placed in loose lifts not more than 8 inches thick and compacted. The fill should be compacted to at least 90% of the maximum density obtainable by the ASTM Designation D1557 test method (95% within building areas). The moisture content of the on-site soils at the time of compaction should vary no more than 2% below or above optimum moisture content.

6.7.4 Backfill

All required backfill should be mechanically compacted in layers; flooding should not be permitted. Proper compaction of backfill will be necessary to reduce settlement of the backfill and to reduce settlement of overlying slabs and paving. Backfill should be compacted to at least 90% of the maximum dry density obtainable by the ASTM Designation D1557 method of compaction (95% within building areas). The on-site soils may be used in the compacted backfill. The exterior grades should be sloped to drain away from the foundations to prevent ponding of water.

Some settlement of the backfill should be expected, and any utilities supported therein should be designed to accept differential settlement, particularly at the points of entry to the building. Also, provisions should be made for some settlement of concrete walks supported on backfill.

6.7.5 Material for Fill

The on-site materials, less any debris or organic matter, may be used in required fills. Cobbles larger than 4 inches in diameter should not be used in the fill. Any required import material should consist of relatively non-expansive soils with and Expansion Index of less than 35. The imported materials should contain sufficient fines (at least 15% passing the No. 200 sieve) so as to be relatively impermeable and result in a stable subgrade when compacted. All proposed import materials should be approved by our personnel prior to being placed at the site.

6.8 Feasibility of Infiltration

Based on the soil types encountered during our prior investigations at the site, infiltration is anticipated to be a feasible means of disposal of on-site stormwater runoff. In fact, the property immediately adjacent to the west of the project site was formerly occupied by a stormwater percolation/detention basin with the bottom established at approximately Elevation 92 and side slopes with inclinations ranging between 7:1 (horizontal:vertical) to 10:1; a 12-foot wide gravel drain, with a bottom elevation of 78.5 was also installed within the basin.

The infiltration system should be designed by the project civil engineer depending on the volume of water expected to be discharged into the infiltration system; the civil engineer will likely require site-specific testing to evaluate the infiltration rate to be used in the design. Recommendations provided by the governing regulatory agency, including the guidelines provided in the County of Los Angeles Department of Public Works, "Low Impact Development Standards Manual," should be followed in selecting locations, designing, installing, and maintaining the infiltration system. All stormwater infiltration facilities should be set back at least 20 feet (vertically or horizontally) from existing structures and other settlement-sensitive features.

6.9 Geotechnical Observation

The reworking of the upper soils and the compaction of all required fill should be observed and tested during placement by a representative of our firm. This representative should perform at least the following duties:

- Observe the clearing operations for proper removal of all unsuitable materials.
- Perform field percolation testing to provide design parameters for design of stormwater infiltration facility.
- Observe the exposed subgrade in areas to receive fill and in areas where excavation has resulted in the desired finished subgrade. The representative should also observe proofrolling and delineation of areas requiring overexcavation.
- Evaluate the suitability of on-site and import soils for fill placement; collect and submit soil samples for required or recommended laboratory testing where necessary.
- Observe the fill and backfill for uniformity during placement.
- Test backfill for field density and compaction to determine the percentage of compaction achieved during backfill placement.
- Observe and probe foundation materials to confirm that suitable bearing materials are present at the design foundation depths.
- Observe the installation of drilled cast-in-place concrete or ACIP pile foundation for achievement of proper depth and diameter, if used.

The governmental agencies having jurisdiction over the project should be notified prior to commencement of grading so that the necessary grading permits can be obtained and arrangements can be made for required inspection(s). The contractor should be familiar with the inspection requirements of the reviewing agencies.

7.0 Basis for Recommendations

The recommendations provided in this report are based upon our understanding of the described project information and on our interpretation of the data collected during our subsurface explorations. We have made our recommendations based upon experience with similar subsurface conditions under similar loading conditions. The recommendations apply to the specific project discussed in this report; therefore, any change in the structure configuration, loads, location, or the site grades should be provided to us so that we can review our conclusions and recommendations and make any necessary modifications.

The recommendations provided in this report are also based upon the assumption that the necessary geotechnical observations and testing during construction will be performed by representatives of our firm. The field observation services are considered a continuation of the geotechnical investigation and essential to verify that the actual soil conditions are as expected. This also provides for the procedure whereby the client can be advised of unexpected or changed conditions that would require modifications of our original recommendations. In addition, the presence of our representative at the site provides the client with an independent professional opinion regarding the geotechnically-related construction procedures. If another firm is retained for the geotechnical observation services, our professional responsibility and liability would be limited to the extent that we would not be the geotechnical engineer of record.

Project labor agreements are often written in such a manner to preclude non-union firms from providing inspection and testing services during construction. If your project is considering being signatory to a project labor agreement or other union labor agreement, it would be beneficial for the labor agreement to include language that specifically excludes construction soils and materials inspection. Failure to exclude construction inspection from the project labor agreement would likely preclude the geotechnical engineer of record from continuing services during construction and limit construction inspection and testing to union firms. We would be pleased to meet with you to discuss the implications associated with project labor agreements.

According to Section 11.4.8 in ASCE 7-16, "a ground motion hazard analysis shall be performed in accordance with Section 21.2 for the following structures on Site Class D and E sites with S_1 greater than or equal to 0.2." However, "A ground motion hazard analysis is not required for structures where: Structures on Site Class D sites with S_1 greater than or equal to 0.2, provided the value of the seismic response coefficient C_s is determined by Eq. (12.8-2) for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Eq. (12.8-3) for $T_L \geq T > 1.5T_s$ or Eq. (12.8-4) for $T > T_L$." The F_v value of 1.7 above from Table 11.4-2 assumes that this exception is met and that a ground motion hazard analysis is not required. Should this exception not be met, a ground motion hazard analysis will be required to determine the Design response spectra for the proposed structures at this site.

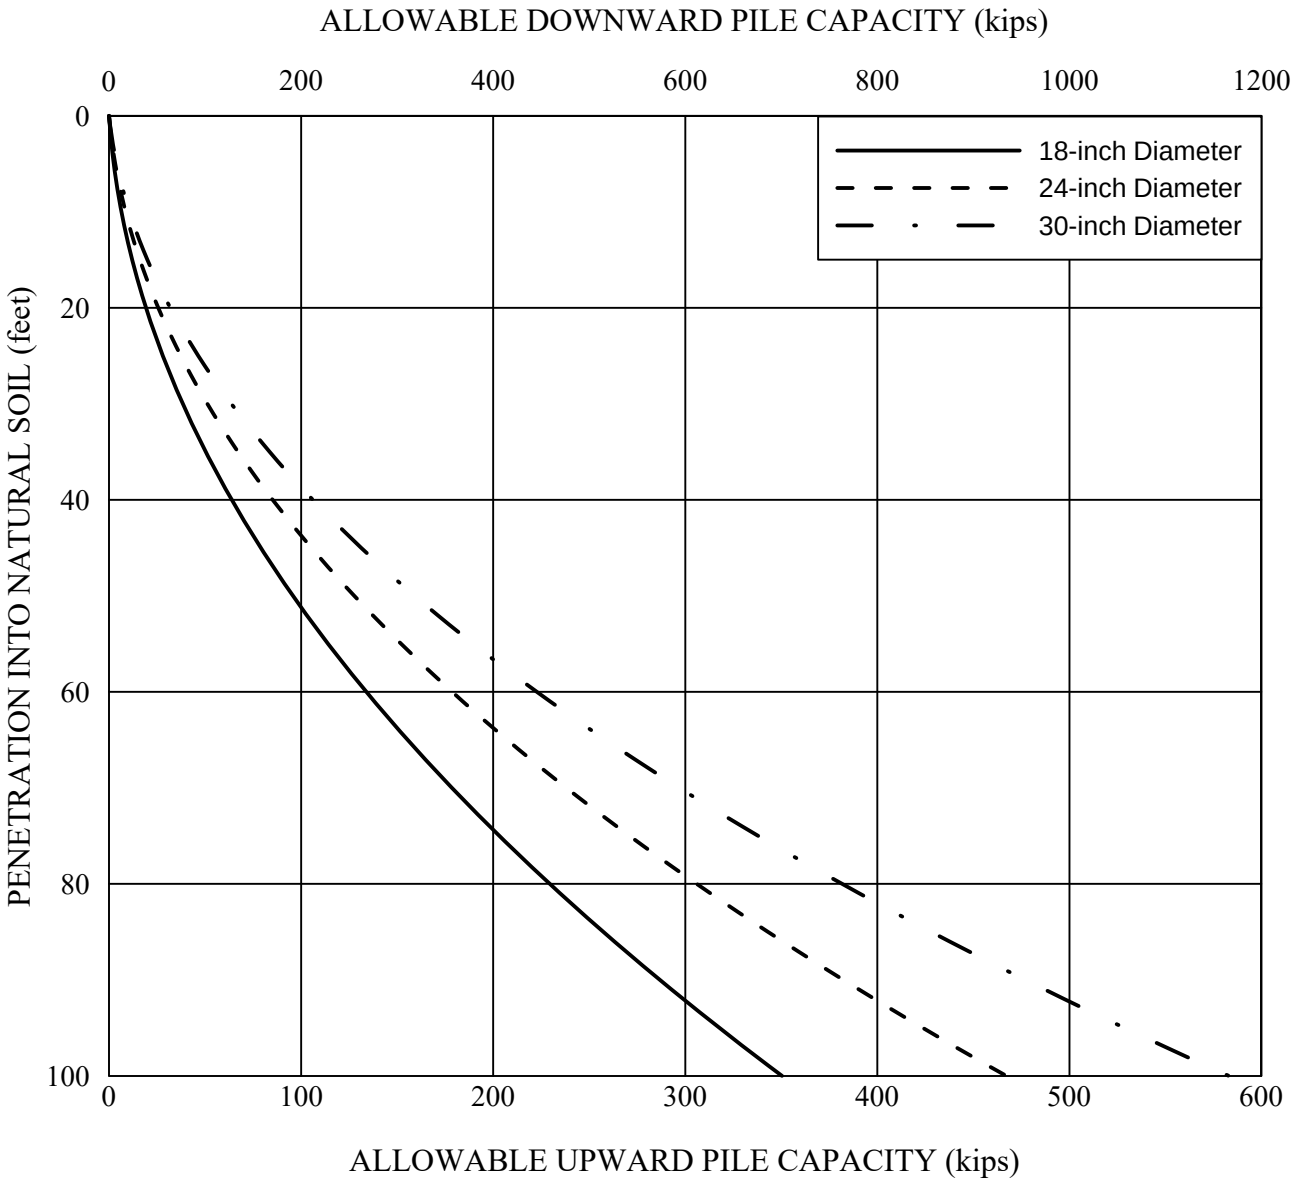
Drilled Pile Capacities



NOTES:

(1) The indicated values refer to the total of dead plus live loads; a one-third increase may be used when considering wind or seismic loads.

(2) Piles in groups should be spaced a minimum of 3 pile diameters on centers.

(3) The indicated values are based on the strength of the soils; the actual pile capacities may be limited to lesser values by the strength of the piles.

PRIOR FIELD EXPLORATIONS AND LABORATORY TEST RESULTS BY WOOD PREDECESSOR COMPANY LEROY CRANDALL AND ASSOCIATES

Appendix A
Prior Field Explorations and Laboratory Test Results by Wood Predecessor Company LeRoy Crandall and Associates

Our predecessor firm of LeRoy Crandall and Associates previously performed subsurface exploration and laboratory testing at the site. Boring logs are presented in Figures A-1.1 through A-1.21. The following laboratory test results are presented:

- Moisture and density: presented on the boring logs in Figures A-1 through A-21.
- Direct shear: presented in Figures A-3.1 and A-3.2.
- Consolidation: presented in Figures A-4.1 through A-4.3.
- Compaction and CBR presented in Figures A-5.1 and A-5.2

1 INTRODUCTION

In-situ seismic measurements using active- and passive-source surface wave techniques were performed at 1950 E Grand Avenue in El Segundo, California on August 27, 2020. The purpose of this investigation was to provide a shear (S) wave velocity profile to a depth of 30 m (100 ft), or greater, and estimate the average S-wave velocity of the upper 30 m (V_{S30}) or 100 ft (V_{S100ft}). The active-source surface wave technique utilized during this investigation consisted of the multi-channel analysis of surface waves (MASW) method. The passive-source surface wave technique consisted of the array microtremor method. The locations of the active- and passive-source surface wave testing locations are shown on Figure 1. Array microtremor measurements were made using a triangle-shaped array (Array 1) and MASW measurements were made on a linear array along one of the legs of Array 1 (Array 2).

V_{S30} is used in the NEHRP provisions and the Uniform Building Code (UBC) to separate sites into classes for earthquake engineering design (BSSC, 2009). V_{S100ft} is used in the International Building Code (IBC) for site classification. These site classes are as follows:

Class A – hard rock – $V_{S30} > 1500$ m/s (UBC) or $V_{S100ft} > 5{,}000$ ft/s (IBC)
Class B – rock – $760 < V_{S30} \leq 1500$ m/s (UBC) or $2{,}500 < V_{S100ft} \leq 5{,}000$ ft/s (IBC)
Class C – very dense soil and soft rock – $360 < V_{S30} \leq 760$ m/s (UBC)
or $1{,}200 < V_{S100ft} \leq 2{,}500$ ft/s (IBC)
Class D – stiff soil – $180 < V_{S30} \leq 360$ m/s (UBC) or $600 < V_{S100ft} \leq 1{,}200$ ft/s (IBC)
Class E – soft soil – $V_{S30} < 180$ m/s (UBC) or $V_{S100ft} < 600$ ft/s (IBC)
Class F – soils requiring site-specific evaluation

At many sites, active surface wave techniques (MASW) with the utilization of portable energy sources, such as hammers and weight drops, are sufficient to obtain S-wave velocity sounding to 30 m (100 ft) depth. At sites with high ambient noise levels and/or very soft soils, these energy sources may not be sufficient to image to this depth and a larger energy source, such as a bulldozer, is necessary. Alternatively, passive surface wave techniques, such as the array microtremor technique can be used to extend the depth of investigation at sites that have adequate ambient noise conditions. It should be noted that two-dimensional passive-source surface wave arrays (e.g. triangular, circular, or L-shaped arrays) are expected to perform better than linear arrays.

This report contains the results of the active and passive surface wave measurements conducted at the site. An overview of the surface wave methods is given in Section 2. Field and data reduction procedures are discussed in Sections 3 and 4, respectively. Data modeling is presented in Section 5 and interpretation and results are presented in Section 6. References and our professional certification are presented in Sections 7 and 8, respectively.

2 OVERVIEW OF SURFACE WAVE TECHNIQUES

2.1 Introduction

Active- and passive-source (ambient vibration) surface wave techniques are routinely utilized for site characterization. Active surface wave techniques include the spectral analysis of surface waves (SASW) and multi-channel array surface wave (MASW) methods. Passive surface wave techniques include the horizontal over vertical spectral ratio (HVSR) technique and the array and refraction microtremor methods.

The basis of surface wave methods is the dispersive characteristic of Rayleigh and Love waves when propagating in a layered medium. Surface waves of different wavelengths (λ) or frequencies (f) sample different depth. As a result of the variance in the shear stiffness of the distinct layers, waves with different wavelengths propagate at different phase velocities; hence, dispersion. A surface wave dispersion curve is the variation of V_R or V_L with λ or f. The Rayleigh wave phase velocity (V_R) depends primarily on the material properties (V_S, mass density, and Poisson's ratio or compression wave velocity) over a depth of approximately one wavelength. The Love wave phase velocity (V_L) depends primarily on V_S and mass density. Rayleigh and Love wave propagation are also affected by damping or seismic quality factor (Q). Rayleigh wave techniques are utilized to measure vertically polarized S-waves (S_V-wave); whereas, Love wave techniques are utilized to measure horizontally polarized S-waves (S_H-wave).

2.2 Surface Wave Techniques

The MASW and array microtremor techniques were utilized during this investigation and are discussed below.

2.2.1 MASW Technique

A description of the MASW method is given by Park, 1999a and 1999b and Foti, 2000. Ground motions are typically recorded by 24, or more, geophones typically spaced 1 to 3 m apart along a linear array and connected to a seismograph. Energy sources for shallow investigations include various sized hammers and vehicle mounted weight drops. When applying the MASW technique to develop a one-dimensional (1-D) V_S model, it is preferable to use multiple-source offsets from both ends of the array. The most commonly applied MASW technique is the Rayleigh-wave based MASW method, which we refer to as MAS_RW to distinguish from Love-wave based MASW (MAS_LW). MAS_RW and MAS_LW acquisition can easily be combined with P- and S-wave seismic refraction acquisition, respectively. MAS_RW data are generally recorded using a vertical source and vertical geophone but may also be recorded using a horizontal geophone with radial (in-line) orientation. MAS_LW data are recorded using transversely orientated horizontal source and transverse horizontal geophone.

A wavefield transform is applied to the time-history data to convert the seismic record from time-offset space to frequency-wavenumber (f-k) space in which the fundamental or higher surface-wave modes can be easily identified as energy maxima and picked. Frequency and/or wavenumber can easily be mapped to phase velocity, slowness, or wavelength using the following properties: $k = 2\pi/\lambda$, $\lambda = v/f$. Common wave-field transforms include: the f-k transform (a 2D fast Fourier transform), slant-stack transform (also referred to as intercept-

slowness or τ-p transform and equivalent to linear Radon transform), frequency domain beamformer, and phase-shift transform. The minimum wavelength that can be recovered from MASW data set without spatial aliasing is equal to the minimum receiver spacing. Occasionally, SASW analysis procedures are used to extract surface wave dispersion data, from fixed receiver pairs, at smaller wavelengths than can be recovered by wavefield transformation. Construction of a dispersion curve over the wide frequency/wavelength range necessary to develop a robust V_S model while also limiting the maximum wavelength based on an established near-field criterion (e.g. Yoon and Rix, 2009; Li and Rosenblad, 2011), generally requires multiple source offsets.

Although the clear majority of MASW surveys record Rayleigh waves, it has been shown that Love wave techniques can be more effective in some environments, particularly shallow rock sites and sites with a highly attenuative, low velocity surface layer (Xia, et al., 2012; **GEO***Vision*, 2012; Yong, et al., 2013; Martin, et al., 2014). Rayleigh wave techniques, however, are generally more effective at sites where velocity gradually increases with depth because larger energy sources are readily available for the generation of Rayleigh waves. Rayleigh wave techniques are also more applicable to sites with high velocity layers and/or velocity inversions because the presence of such structures is more apparent in the Rayleigh wave dispersion curves than in Love wave dispersion curves. Rayleigh wave techniques are preferable at sites with a high velocity surface layer because Love waves do not theoretically exist in such environments. Occasionally, the horizontal radial component of a Rayleigh wave may yield higher quality dispersion data than the vertical component because different modes of propagation may have more energy in one component than the other. Recording both the vertical and horizontal components of the Rayleigh wave is particularly useful at sites with complex modes of propagation or when attempting to recover multiple Rayleigh wave modes for multi-mode modeling as demonstrated in Dal Moro, et al, 2015. Joint inversion of Rayleigh and Love wave data may yield more accurate V_S models and also offer a means to investigate anisotropy, where S_V- and S_H-wave velocity are not equal, as shown in Dal Moro and Ferigo, 2011.

2.2.2 Array Microtremor Technique

A detailed discussion of the array microtremor method can be found in Okada, 2003. Unlike active source techniques which use an active energy source (i.e. hammer), the array microtremor technique (also referred to as passive surface wave or array ambient vibration method) records background noise (ambient vibrations) emanating from ocean wave activity, wind noise, traffic, industrial activity, construction, etc. The technique uses 4, or more, receivers aligned in a 2-dimensional array. Triangle, circle, semi-circle, and "L" shaped arrays are commonly used, although any 2-dimensional arrangement of receivers can be used. For investigations of the upper 100 m, receivers typically consist of 1 to 4.5 Hz geophones. For deeper investigations, 5 to 120 s seismometers are generally utilized. The nested triangle array, which consists of several embedded equilateral triangles, is popular as it provides accurate dispersion curves with a relatively small number of geophones. The "L" array is useful at sites located at the corner of intersecting streets. The maximum receiver separation in an array should be at a minimum equal to the desired depth of investigation. Typically, 15 to 60 minutes of ambient vibration data is recorded depending on the size of the array, desired depth of investigation, and noise conditions. Investigations to depths on the order of 1 km may require that ambient vibrations are recorded for a much longer duration. The surface wave dispersion curve is typically estimated from array microtremor data using various f-k methods such as beamforming (Lacoss, et al., 1969), and

maximum-likelihood (Capon, 1969), and the spatial-autocorrelation (SPAC) method. The beam-forming and maximum-likelihood methods are generally referred to as the frequency wavenumber (FK) and high-resolution frequency wavenumber (HRFK or HFK) methods. The SPAC method was originally based on work by Aki, 1957 and has since been extended and modified (Ling and Okada, 1993 and Ohori *et al*., 2002) to permit the use of noncircular arrays, and is now collectively referred to as extended spatial autocorrelation (ESPAC or ESAC). Further modifications to the SPAC method permit the use of irregular or random arrays (Bettig *et al*., 2001). Although it is common to apply SPAC methods to obtain a surface wave dispersion curve for modeling, other approaches involve direct modeling of the coherency data, also referred to as SPAC coefficients (Asten, 2006 and Asten, *et al*., 2015). The beam-forming and maximum-likelihood methods are generally referred to as the frequency wavenumber (FK) and high-resolution frequency wavenumber (HRFK or HFK) methods, respectively. More recently, a Rayleigh wave three-component beamforming method (RTBF) has been developed (Wathelet, et al., 2018) and appears to offer significant resolution enhancements over other methods.

FK, HRFK and RTBF methods are generally expected to perform better when ambient vibration sources are not azimuthally well-distributed (e.g. rural area where the primary noise source is a large industrial facility). SPAC methods are expected to perform better when noise sources are azimuthally well-distributed (e.g. in a large urbanized area).

The minimum wavelength surface wave that can be extracted from an array microtremor dataset acquired utilizing a symmetric array is typically set equal to the minimum receiver spacing. The maximum wavelength is often set equal to twice the maximum receiver separation for SPAC analysis and the maximum receiver spacing for FK analysis.

2.3 Surface Wave Dispersion Curve Modeling

The dispersion curves generated from the active and passive surface wave soundings are generally combined and modeled using iterative forward and inverse modeling routines. The final model profile is assumed to represent actual site conditions. The theoretical model used to interpret the dispersion curve assumes horizontally layered, laterally invariant, homogeneous-isotropic material. Although these conditions are seldom strictly met at a site, the results of active and/or passive surface wave testing provide a good "global" estimate of the material properties along the array. The results may be more representative of the site than a borehole "point" estimate.

The surface wave forward problem is typically solved using the Thomson-Haskell transfer-matrix (Thomson, 1950; Haskell, 1953) later modified by Dunkin (1965) and Knopoff (1964), dynamic stiffness matrix (Kausel and Roësset, 1981), or reflection and transmission coefficient (Kennett, 1974) methods. All of these methods can determine fundamental- and higher-mode phase velocities, which correspond to plane waves in 2-D space. The transfer-matrix method is often used in MASW and passive surface-wave software packages, whereas the dynamic stiffness matrix is utilized in many SASW software packages. MAS_RW and/or passive surface-wave modeling may involve modeling of the fundamental mode, some form of effective mode, or multiple individual modes (multi-mode). As outlined in Roësset et al. (1991), several options exist for forward modeling of Rayleigh wave SASW data. One formulation takes into account only fundamental mode plane Rayleigh-wave motion (called the 2-D solution), whereas another includes all stress waves (e.g. body, fundamental, and higher mode surface waves) and

incorporates a generalized receiver geometry (3-D global solution) or actual receiver geometry (3-D array solution).

The fundamental mode assumption is generally applicable to modeling Rayleigh-wave dispersion data collected at normally dispersive sites, providing there are not abrupt increases in velocity or steep velocity gradients. Effective-mode or multi-mode approaches are often required for irregularly dispersive sites and sites with steep velocity gradients at shallow depth. If active and passive surface wave data are combined or $MASW$ data are combined from multiple seismic records with different source offsets and receiver gathers, then effective-mode computations are limited to algorithms that assume far-field plane Rayleigh wave propagation. Local search (e.g. linearized matrix inversion methods) or global search methods (e.g., Monte Carlo approaches such as simulated annealing, generic algorithms and neighborhood algorithm) are typically used to solve the inverse problem.

The maximum wavelength (λ_{max}) recovered from a surface wave data set is typically used to estimate depth of investigation although a sensitivity analysis of the V_S models would be a more robust means to estimate depth of investigation. For normally dispersive velocity profiles with a gradual increase in V_S with depth, the maximum depth of investigation is on the order of $\lambda_{max}/2$ for both Rayleigh and Love wave dispersion data. For velocity profiles with an abrupt increase in V_S at depth, the maximum depth of investigation is on the order of $\lambda_{max}/3$ for Rayleigh wave dispersion data but less than $\lambda_{max}/3$ for Love wave dispersion data. The depth of investigation can be highly variable for sites with complex velocity structure (e.g. high velocity layers).

As with all surface geophysical methods, the inversion of surface wave dispersion data does not yield a unique V_S model and multiple possible solutions may equally fit the experimental data. Based on experience at other sites, the shear wave velocity models (V_S and layer thicknesses) determined by surface wave testing are within 20% of the velocities and layer thicknesses that would be determined by other seismic methods (Brown, 1998). The average velocity of the upper 30 m, however, is much more accurate, often to better than 5%, because it is not sensitive to the layering in the model. V_{S30} does not appear to suffer from the non-uniqueness inherent in V_S models derived from surface wave dispersion curves (Martin et al., 2006, Comina et al., 2011). Therefore, V_{S30} is more accurately estimated from the inversion of surface wave dispersion data than the resulting V_S models.

It may not always be possible to develop a coherent, fundamental mode dispersion curve over sufficient frequency range for modeling due to dominant higher modes with the higher modes not clearly identifiable for multi-mode modeling. It may, however, be possible to identify the Rayleigh wave phase velocity of the fundamental mode at 40 m wavelength (V_{R40}) in which case V_{S30} can at least be estimated using the Brown et al., 2000 relationship:

$$V_{S30} = 1.045V_{R40}$$

This relationship was established based on a statistical analysis of a large number of surface wave data sets from sites with control by velocities measured in nearby boreholes and has been further evaluated by Martin and Diehl, 2004, and Albarello and Gargani, 2010. Further investigation of this approach has revealed that V_{S30} is generally between V_{R40} and V_{R45} with V_{R40} often being most appropriate for shallow groundwater sites and V_{R45} for deep ground water sites. A detailed study of such an approach for Love wave dispersion data has not been

conducted; however, preliminary analysis demonstrates that V_{S30} is generally between V_{L50} and V_{L55}. Although we do not recommend that these empirical V_{S30} estimates replace modeling of surface wave dispersion data, they do offer a means of cost effectively evaluating V_{S30} over a large area. V_{R40} or V_{L55} can also be used to quantify error in V_{S30} by evaluating the scatter in the dispersion data at these wavelengths.

3 FIELD PROCEDURES

The active- and passive-source surface wave sounding locations at the site were established by **GEO***Vision* personnel and are shown in Figure 1. Two types of surface wave data were acquired at the site: an active-source surface wave array to characterize near-surface velocity structure and a passive-source surface wave array to characterize deeper velocity structure. Passive surface wave data were acquired along Array 1 using the array microtremor method. Active surface wave data were acquired along Array 2 using the MASW technique.

The passive surface wave equipment consisted of two Geometrics Geode signal enhancement seismographs, 4.5 Hz vertical geophones, and seismic cables. The triangle-shaped Array 1 consisted of 43, 4.5 Hz geophones spaced 6 – 7.5 m (19.7 – 23 ft) apart with the outer dimensions of the array being 60 m (197 ft).

Ambient noise measurements were made along the passive array for 60 minutes with a 2 ms sample rate (120, 30 second records). All passive surface wave data were stored on a laptop computer for later processing. The field geometry and associated files names were documented in field notes.

MASW equipment used during this investigation consisted of two Geometrics Geode signal enhancement seismographs, 4.5 Hz vertical geophones, seismic cable, a 4 lb. hammer, a 12 and 20 lb. sledgehammers, and a 240 lb. accelerated weight drop (AWD). MASW data were acquired along a linear array of 48 geophones spaced 1.5 m (4.9 ft) apart. Shot points were located between 1.5 and 20 m (4.9 and 65.6 ft) from the end geophone locations and at 12 m (39.4 ft) intervals in the interior of the array. The 4 lb. hammer and/or 12 lb. sledgehammer were used for the near offset source locations and interior source locations. The AWD and 20 lb. sledgehammer were used for source locations offset from the ends of the array. Data from the transient impacts (hammers) were generally averaged 6 – 8 times to improve the signal-to-noise ratio. All field data were saved to hard disk and documented on field data acquisition forms.

4 DATA REDUCTION

The MASW data were reduced using the software Seismic Pro Surface V9.0 developed by Geogiga and multiple in-house scripts for various data extraction and formatting tasks, with all data reduction documented in a Microsoft Excel spreadsheet.

The following steps were used for data reduction:

- Input seismic records to be used for analysis into software package.
- Check and correct source and receiver geometry as necessary.
- Select offset range used for analysis (multiple offset ranges utilized for each seismic record as discussed below) and document in spreadsheet.
- Apply phase shift transform to seismic record to convert the data from time – offset to frequency – phase velocity space.
- Identify, pick, save, and document dispersion curve.
- Change the receiver offset range and repeat process.
- Repeat process for all seismic records.
- Use in-house script to apply near-field criteria with maximum wavelength set equal to 1.0 times the source to midpoint of receiver array distance.
- Use in-house script to merge multiple dispersion curves extracted from the MASW data collected along each seismic line for a specific source type (different source locations, different receiver offset ranges, etc.).
- Edit dispersion data, as necessary (e.g. delete poor quality curves and outliers).
- Calculate a representative dispersion curve at equal log-frequency or log-wavelength spacing for the MASW dispersion data using a moving average, polynomial curve fitting routine.

This unique data reduction strategy, which can involve combination of over 100 dispersion curves for a 1D sounding, is designed for characterizing sites with complex velocity structure that do not yield surface wave dispersion data over a wide frequency range from a single source type or source location. The data reduction strategy ensures that the dispersion curve selected for modeling is representative of average conditions beneath the array and spans as broad a frequency/wavelength range as possible while considering near field effects.

The array microtremor data were reduced using the Seisimager software package developed by Oyo Corporation/Geometrics, Inc. and the following steps:

The processing sequence for implementation of the ESAC method in the SeisImager software package is as follows:

- Input all seismic records for a dataset into software.
- Load receiver geometry (x and y positions) for each channel in seismic record.
- Calculate the SPAC coefficients for each seismic record and average.
- Optionally, select a subset of receiver offset ranges for analysis (e.g. only select receiver pairs with multiple azimuths).
- For each frequency calculate the RMS error between the SPAC coefficients and a Bessel function of the first kind and order zero over a user defined phase velocity range and velocity step.

- Plot an image of RMS error as a function for frequency (f) and phase velocity (v).
- Identify and pick the dispersion curve as the continuous trend on the f-v image with the lowest RMS error.
- Repeat the process for all arrays and time blocks.
- Use an in-house script to convert dispersion curves to appropriate format for editing.
- Edit dispersion data, as necessary, and use in-house script to combine all dispersion data after setting maximum wavelength to about 2 times the maximum receiver spacing (equivalent to $k_{min}/2$ for a symmetrical array), or less.
- Calculate a representative dispersion curve for the passive dispersion data from each array using a moving average polynomial curve fitting routine.

The representative dispersion curves from the active and passive surface wave data were combined and the moving average polynomial curve fitting routine in WinSASW V3 was used to generate a composite representative dispersion curve for modeling. During this process the active and passive surface wave dispersion data were given equal weights. An equal logarithm wavelength sample rate was used for the representative dispersion curve to reflect the gradual loss in model resolution with depth.

5 DATA MODELING

Surface wave data were modeled using the effective mode routine in WinSASW V3 software package. During this process an initial velocity model was generated based on general characteristics of the dispersion curve and the inverse modeling routine utilized to adjust the layer V_S until an acceptable agreement with the observed data was obtained. Layer thicknesses were adjusted, and the inversion process repeated until a V_S model was developed with low RMS error between the observed and calculated dispersion curves. In many cases, once an acceptable V_S model is developed, layer thicknesses are again adjusted, and the inversion process repeated to develop an ensemble of V_S models with similar RMS error to quantify non-uniqueness. At this site, S-wave velocity appears to increase gradually with depth, and it was not considered necessary to develop multiple V_S models. Data inputs into the modeling software include layer thickness, S-wave velocity, P-wave velocity or Poisson's ratio, and mass density. P-wave velocity and mass density only have a very small influence (i.e. less than 10%) on the S-wave velocity model generated from a surface wave dispersion curve. However, realistic assumptions for P-wave velocity, which is significantly impacted by the location of the saturated zone, and mass density will slightly improve the accuracy of the S-wave velocity model.

Constant mass density values of 1.88 to 2.00 gm/cm^3 (117 to 125 lb/ft^3) were used in the velocity profiles for subsurface soils/rock depending on P- and S-wave velocity. Within the normal range encountered in geotechnical engineering, variation in mass density has a negligible (±2%) effect on the estimated V_S from surface wave dispersion data. During modeling of Rayleigh wave dispersion data, the compression wave velocity, V_P, for unsaturated sediments was estimated using a Poisson's ratio, v, of 0.3 and the relationship:

$$V_P = V_S \left[(2(1-v))/(1-2v)\right]^{0.5}$$

Poisson's ratio has a larger effect than density on the estimated V_S from Rayleigh wave dispersion data. Achenbach (1973) provides approximate relationship between Rayleigh wave velocity (V_R), V_S and v:

$$V_R = V_S \left[(0.862 + 1.14\, v)/(1+ v)\right]$$

Using this relationship, it can be shown that V_S derived from V_R only varies by about 10% over possible 0 to 0.5 range for Poisson's ratio where:

$V_S = 1.16V_R$ for $v = 0$
$V_S = 1.05V_R$ for $v = 0.5$

The realistic range of Poisson's ratio for typical unsaturated sediments is about 0.25 to 0.35. Over this range, V_S derived from modeling of Rayleigh wave dispersion data will vary by about 5%. To reduce error associated with high Poisson ratio of saturated sediments, the saturated zone was constrained at a depth of 32 m (105 ft) based on inspection of seismic refraction first-arrival data and a possible water table seismic reflector.

6 INTERPRETATION AND RESULTS

The fit of the calculated fundamental mode dispersion curve to the experimental data collected along Arrays 1 and 2 and the modeled V_S profile for the surface wave sounding are presented as Figure 2. The resolution decreases gradually with depth due to the loss of sensitivity of the dispersion curve to changes in V_S at greater depth. The V_S profile used to match the field data is provided in tabular form in both metric and Imperial units as Tables 1 and 2, respectively.

The V_S models were developed from the surface wave dispersion data derived from array microtremor and MASW data acquired along Arrays 1 and 2, respectively. The Rayleigh wave phase velocities from the passive surface wave array are in good agreement with those from the MASW data in the region where they connect. Scatter in dispersion data from the two methods are expected to be associated with lateral velocity variability beneath the arrays.

The estimated depth of investigation for the combined active and passive surface wave sounding is about 60 m (197 ft), about 40% of the maximum Rayleigh wave wavelength. The V_S model indicates that V_S gradually increases with depth from about 240 m/s (787 ft/s) immediately below the surface to about 465 m/s (1,525 ft/s) at a depth of about 59 m (194 ft).

The average shear wave velocity to a depth of 30 m (V_{S30}) is 333 m/s for the V_S model. The average shear wave velocity to a depth of 100 ft (V_{S100ft}) is 1,095 ft/s for the V_S model. Therefore, according to the NEHRP provisions of the Uniform Building Code, the area in the vicinity of Arrays 1 and 2 is classified as Site Class D, stiff soil.

Table 1 Arrays 1 and 2 V_S Model (Metric Units)

Depth to Top of Layer (m)	Layer Thickness (m)	S-Wave Velocity (m/s)	Inferred P-Wave Velocity (m/s)	Inferred Poisson's Ratio	Assumed Density (g/cm^3)

I. Project Description

i. Background

The purpose of this preliminary Low Impact Development (LID) study is to provide an analysis of the required LID treatment volumes, to determine methods for providing the required treatment, and to ensure that the site design properly implements the determined treatment methods.

The project is located at 1950 East Grand Avenue, El Segundo, CA within Los Angeles County. The total project area is 5.4 +/- acres and consists of two essentially equal parcels (2.69 acres each) that bisect the site, with 1950 East Grand Avenue as the western property and 1960 East Grand Avenue as the eastern property.

The area is bounded by East Grand Avenue to the North and private lots to the South, East, and West. 1950 East Grand Avenue contains an existing parking structure (approximately 23,750 SF footprint) and 1960 East Grand Avenue contains an existing office building (approximately 16,900 SF footprint). Both properties contain landscaping, hardscape areas, and access roads.

The proposed project will protect-in-place the existing office building and parking structure. The proposed improvements include a 98,346 SF office building (30,683 SF footprint) within the 1950 East Grand Avenue property and a 89,024 SF parking garage (26,240 SF footprint) within the 1960 East Grand Avenue property. Each property will contain new access roadways, new hardscape areas, and new landscaping features.

See *Appendix A* for the vicinity map for the project.

See *Appendix B* for LID exhibit showing the overall site as well as the division of the two properties.

ii. Existing Drainage Condition

Although the site is already developed, there does not currently exist any LID treatment devices on either property.

The existing drainage for the site is collected by a series of onsite private catch basins. There are two separate onsite storm drain systems, and although the site contains two separate properties, the existing storm drain systems are not isolated to one site or the other, they both collect runoff from each property.

Each storm drain system has a connection point to the public storm drain system within East Grand Avenue. One point of connection is located in the western driveway within 1950 East Grand Avenue and ties into a public manhole located on the approximate centerline of East Grand Avenue. The second point of connection is located just west of the eastern driveway within 1960 East Grand Avenue and ties into the back of a catch basin located along the Southern right-of-way boundary of East Grand Avenue.

iii. Proposed Drainage Condition

For the proposed condition, the overall drainage pattern will remain unchanged with a series of onsite catch basins collecting the flows. Most of the existing onsite inlets and storm drain pipes will be removed since it will not allow proper drainage for the proposed project. For the proposed project, the storm drain will be broken up into two systems, one for each property. Each proposed storm drain system will also have a dry well at the down stream end for water quality treatment prior to runoff entering the public storm drain system. The existing points of connection will be reused.

II. Low Impact Development

County of Los Angeles Department of Public Works Low Impact Design Standards Manual (February 2014) will be used to design the LID system for the site. Per the manual, the project is required to treat the 85th percentile storm event for the entire site since there is over 5,000 sf of impervious area being added and more than 50% of the site is being redeveloped.

Per the geotechnical report, it is anticipated that infiltration will be viable for this site. The geotechnical engineer reached this conclusion by analyzing the existing soil types as well as knowledge of the adjacent property to the west formerly being occupied by a percolation/detention basin. Once the final geotechnical report has been completed and percolation tests have been performed, the final LID treatment method will be determined. If infiltration is not feasible, proprietary capture and reuse (depending on landscape needs) or biofiltration treatment methods will be implemented.

The Los Angeles County Hydrology Manual and the LA County HydroCalc software were used to calculate the required water quality volume. Per the software, 1950 East Grand Avenue is required to treat 6,650 CF of stormwater and 1960 East Grand Avenue is required to treat 6,665 CF of stormwater. Each site is required to have an LID treatment system sized to treat the respective site's volume. If infiltration is not feasible and biofiltration is required to be implemented, a 1.5x penalty will be applied to the total volume required to be treated.

See A*ppendix C* for stormwater treatment calculations.

See *Appendix D* for the dry well design draft.

See *Appendix E* for excerpts from the geotechnical report.

III. Conclusion

Based on the LID study, stormwater treatment is required for the entire site since there is no current stormwater quality treatment methods on site, over 5,000 sf of impervious area is being added, and more than 50% the site is being redeveloped. Per the preliminary geotechnical report, infiltration is likely to be feasible on site. Based on these factors, dry wells will be used to treat the required stormwater treatment volumes onsite and all County LID requirements will be met.

Each property will be required to have its own standalone treatment system.

2. **BOLTED RING & GRATE/COVER** - DIAMETER & TYPE AS SHOWN. CLEAN CAST IRON WITH WORDING **"STORM WATER ONLY"** IN RAISED LETTERS. **BOLTED IN 2 LOCATIONS** AND SECURED TO CONE WITH MORTAR. RIM ELEVATION ±0.02' OF PLANS.
3. **STABILIZED BACKFILL** - TWO-SACK SLURRY MIX.
4. **PRE-CAST LINER -** 4000 PSI CONCRETE 48" ID. X 54" OD. **CENTER IN HOLE** AND ALIGN SECTIONS **TO MAXIMIZE BEARING SURFACE.**
5. **INLET PIPE/OUTLET PIPE (BY OTHERS).** SEE SEPARATE PLAN FOR INVERT ELEVATIONS.
6. **GRADED BASIN OR PAVING** (BY OTHERS).
7. **COMPACTED BASE MATERIAL**, IF REQUIRED (BY OTHERS).
8. **FREEBOARD DEPTH VARIES** WITH INLET PIPE ELEVATION. INCREASE SETTLING CHAMBER DEPTH AS NEEDED TO MAINTAIN ALL INLET PIPE ELEVATIONS ABOVE RISER PIPE.
9. **NON-WOVEN GEOTEXTILE SLEEVE** - MIRAFI 140 NL. MIN. 6 FT Ø. HELD APPROX. 10 FEET OFF THE BOTTOM OF EXCAVATION.
10. **PUREFLO® DEBRIS SHIELD** - ROLLED 16 GA. STEEL X 24" LENGTH WITH VENTED ANTI-SIPHON AND INTERNAL 0.265" MAX. SWO FLATTENED EXPANDED STEEL SCREEN X 12" LENGTH. **FUSION BONDED EPOXY COATED**.
11. **MIN. 6' Ø DRILLED SHAFT.**
12. **RISER PIPE** - SCH. 40 PVC MATED TO DRAINAGE PIPE AT BASE SEAL.
13. **DRAINAGE PIPE** - ADS HIGHWAY GRADE OR SCH. 40 PVC WITH TRI-A COUPLER. SUSPEND PIPE DURING BACKFILL OPERATIONS. DIAMETER AS NOTED.
14. **ROCK** - WASHED, SIZED BETWEEN 3/8" AND 1-1/2".
15. **FLOFAST® DRAINAGE SCREEN** - SCH. 40 PVC 0.120" SLOTTED WELL SCREEN WITH 32 SLOTS PER ROW/FT. OVERALL LENGTH VARIES, UP TO 120" WITH TRI-B COUPLER.
16. **ABSORBENT** - HYDROPHOBIC PETROCHEMICAL SPONGE. MIN. 128 OZ. CAPACITY. TYPICAL, 2 PER CHAMBER.
17. **FABRIC SEAL** - U.V. RESISTANT GEOTEXTILE - **TO BE REMOVED BY CUSTOMER** AT PROJECT COMPLETION. GRATED ONLY.
18. **MIN 4' Ø DRILLED SHAFT.**
19. **BASE SEAL** - CONCRETE SLURRY.
20. **6 PERFORATIONS MINIMUM PER FOOT, 2 ROWS MINIMUM.**

DRAFT

Maxwell® IV Drainage System Calculations Prepared on September 29, 2020

Project: 1950 Grand - Los Angeles, CA

Contact: Keith Malloy at Ware Malcomb - Los Angeles, CA

Given:

Estimated Flow Rate	0.30	CFS
Safety Factor	3.00	
Design Flow Rate	0.10	CFS
Mitigated Volume	7,319	ft^3
Required Drawdown Time	96	hours
Depth to Emergency Overflow	4.0	ft
Min. Depth to Infiltration	10	ft
Groundwater Depth for Design	100	ft

Proposed:

Drywell Rock Shaft Diameter	4	ft
Drywell Chamber Depth	15	ft
Rock Porosity	40	%
Depth to Infiltration	11	ft
Drywell Bottom Depth	50	ft

Volume of disposal for each drywell based on various time frames are included below.

96 hrs: 0.1 CFS x 96 hours x $\frac{3600\ sec}{1\ hr}$ = 34,560 cubic feet of retained water disposed of.

Chamber diameter = 4 feet. Drywell rock shaft diameter = 4 feet.

Volume provided in each drywell with chamber depth of 15 feet and a depth to overflow of 4 feet.

11 ft x 12.57 ft^2 + 2 ft x 28.27 ft^2 x 40 % + 33 ft x 12.57 ft^2 x 40 % = 327 ft^3

The MaxWell System is composed of 1 drywell(s) .

Total volume provided = 327 ft^3

Total 96 hour infiltration volume = 34,560 ft^3

Total infiltration flowrate = 0.10000 $\frac{ft^3}{sec}$

Based on the total mitigated volume of 7319 CF, after subtracting the volume infiltrated as quickly as it enters the drywell of 5926 CF, the remaining volume is 1393 CF. The storage provided in the drywell system is 327 CF. Therefore 1067 CF can be stored in a separate detention system.

Subject: Letter of Transmittal
Report of Geotechnical Consultation
Proposed Development
1950 and 1960 Grand Avenue
El Segundo, California

Dear Mr. Komae:

We are pleased to submit the results of our geotechnical consultation in support of the proposed development to be constructed at 1950 and 1960 Grand Avenue in El Segundo, California. This consultation was performed in general accordance with the agreement between owner and consultant dated May 20, 2020.

The scope of our services was planned based on our discussions with Mr. Robert Revzan of Artesian Realty Advisors. Mr. Revzan provided us with a description of the project and a conceptual design plan for the project dated April 15, 2020.

The results of our current geotechnical consultation and design recommendations are presented in this report. Please note that you or your representative should submit copies of this report to the appropriate governmental agencies for their review and approval prior to obtaining a building permit.

'Wood' is a trading name for John Wood Group PLC and its subsidiaries

It has been a pleasure to be of professional service to you. Please contact us if you have any questions or if we can be of further assistance.

Sincerely,

Wood Environment & Infrastructure Solutions, Inc.

Figure 4.2: Upward ACIP Capacities

Appendix

Appendix: Prior Field Explorations and Laboratory Test Results by Wood Predecessor Company LeRoy Crandall and Associates

:1 (horizontal to vertical) extending downward from adjacent existing footings. Alternatively, vertical excavation may be supported by properly designed shoring. We would be pleased to present data for design of shoring if required.

Excavations should be observed by personnel of our firm so that any necessary modifications based on variations in the soil conditions can be made. All applicable safety requirements and regulations, including OSHA regulations, should be met.

6.7.3 Compaction

Any required fill soils should be placed in loose lifts not more than 8 inches thick and compacted. The fill should be compacted to at least 90% of the maximum density obtainable by the ASTM Designation D1557 test method (95% within building areas). The moisture content of the on-site soils at the time of compaction should vary no more than 2% below or above optimum moisture content.

6.7.4 Backfill

All required backfill should be mechanically compacted in layers; flooding should not be permitted. Proper compaction of backfill will be necessary to reduce settlement of the backfill and to reduce settlement of overlying slabs and paving. Backfill should be compacted to at least 90% of the maximum dry density obtainable by the ASTM Designation D1557 method of compaction (95% within building areas). The on-site soils may be used in the compacted backfill. The exterior grades should be sloped to drain away from the foundations to prevent ponding of water.

Some settlement of the backfill should be expected, and any utilities supported therein should be designed to accept differential settlement, particularly at the points of entry to the building. Also, provisions should be made for some settlement of concrete walks supported on backfill.

6.7.5 Material for Fill

The on-site materials, less any debris or organic matter, may be used in required fills. Cobbles larger than 4 inches in diameter should not be used in the fill. Any required import material should consist of relatively non-expansive soils with and Expansion Index of less than 35. The imported materials should contain sufficient fines (at least 15% passing the No. 200 sieve) so as to be relatively impermeable and result in a stable subgrade when compacted. All proposed import materials should be approved by our personnel prior to being placed at the site.

6.8 Feasibility of Infiltration

Based on the soil types encountered during our prior investigations at the site, infiltration is anticipated to be a feasible means of disposal of on-site stormwater runoff. In fact, the property immediately adjacent to the west of the project site was formerly occupied by a stormwater percolation/detention basin with the bottom established at approximately Elevation 92 and side slopes with inclinations ranging between 7:1 (horizontal:vertical) to 10:1; a 12-foot wide gravel drain, with a bottom elevation of 78.5 was also installed within the basin.

The infiltration system should be designed by the project civil engineer depending on the volume of water expected to be discharged into the infiltration system; the civil engineer will likely require site-specific testing to evaluate the infiltration rate to be used in the design. Recommendations provided by the governing regulatory agency, including the guidelines provided in the County of Los Angeles Department of Public Works, "Low Impact Development Standards Manual," should be followed in selecting locations, designing, installing, and

maintaining the infiltration system. All stormwater infiltration facilities should be set back at least 20 feet (vertically or horizontally) from existing structures and other settlement-sensitive features.

6.9 Geotechnical Observation

The reworking of the upper soils and the compaction of all required fill should be observed and tested during placement by a representative of our firm. This representative should perform at least the following duties:

- Observe the clearing operations for proper removal of all unsuitable materials.
- Perform field percolation testing to provide design parameters for design of stormwater infiltration facility.
- Observe the exposed subgrade in areas to receive fill and in areas where excavation has resulted in the desired finished subgrade. The representative should also observe proofrolling and delineation of areas requiring overexcavation.
- Evaluate the suitability of on-site and import soils for fill placement; collect and submit soil samples for required or recommended laboratory testing where necessary.
- Observe the fill and backfill for uniformity during placement.
- Test backfill for field density and compaction to determine the percentage of compaction achieved during backfill placement.
- Observe and probe foundation materials to confirm that suitable bearing materials are present at the design foundation depths.
- Observe the installation of drilled cast-in-place concrete or ACIP pile foundation for achievement of proper depth and diameter, if used.

The governmental agencies having jurisdiction over the project should be notified prior to commencement of grading so that the necessary grading permits can be obtained and arrangements can be made for required inspection(s). The contractor should be familiar with the inspection requirements of the reviewing agencies.

Subject: Phase I Environmental Site Assessment
1960 E Grand Avenue
1960 E Grand Avenue, El Segundo, California
EBI Project No. 1119006294

Dear Ms. Le:

Attached please find our *Phase I Environmental Site Assessment* (the report) for the above-mentioned asset (the Subject Property). During the survey and research, our surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the Subject Property and its history. The report was completed according to the terms and conditions authorized by you, the Client. This report has been completed in conformance with the ASTM Standard E 1527-13 and the Cushman and Wakefield Scope of Work.

The purpose of this report is to assist BSREP II Grand Avenue, LLC c/o Cushman and Wakefield in its underwriting of a proposed mortgage loan on the Subject Property described herein.

This report is addressed to BSREP II Grand Avenue, LLC c/o Cushman and Wakefield and their respective successors and assigns.

The purpose of this report is to acquire environmental information, observe the general condition and maintenance status of the Subject Property, to identify recognized environmental conditions in connection with the Subject Property described in this report, and to assist BSREP II Grand Avenue, LLC c/o Cushman and Wakefield, in its pre-sale effort in evaluating their Property.

This Report was performed utilizing methods and procedures consistent with established commercial practices and in conformance with industry standards. The suggestions represent EBI's opinion based on written, graphic or verbal information, the property condition and data available to us at the time of the survey. Factual information regarding operations, conditions or data provided by the Client, occupants, owner or their representative has been assumed to be correct and complete.

There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

EBI is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the report or on the closing of any business transaction.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

At the request of BSREP II Grand Avenue, LLC c/o Cushman and Wakefield, EBI has performed a Phase I Environmental Site Assessment (ESA) of the property located at 1960 E Grand Avenue in El Segundo, California, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment, or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13.

The Subject Property includes two contiguous rectangular-shaped parcels, totaling approximately 5.37 acres. The Subject Property is currently improved with a 12-story, multi-tenant office building, with a net-rentable area of approximately 257,937± square feet and a nine-story parking garage with two sub-levels. There is no basement present beneath the office structure. The existing improvements were constructed in 1987. There are currently no manufacturing or industrial operations conducted at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. EBI's Findings and Opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

1.0 INTRODUCTION

This report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 1960 E Grand Avenue in El Segundo, California.

1.1 PURPOSE

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-13 in connection with the property at the time of the property reconnaissance.

1.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water, and radon.

1.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This Phase I Environmental Site Assessment (the report) has been prepared for the use of BSREP II Grand Avenue, LLC c/o Cushman and Wakefield, in accordance with our Standard Terms and Conditions for Third Party Due Diligence Services approved and signed by BSREP II Grand Avenue, LLC c/o Cushman and Wakefield (the Agreement), and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Terms and Conditions for Third Party Due Diligence Services is maintained at the EBI Consulting office in Burlington, Massachusetts. To the extent any provisions of this report conflict with the terms of the Agreement, the Agreement will control.

EBI has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. This report was prepared with no exceptions or deletions from ASTM Standard E 1527-13.

This Phase I Environmental Site Assessment has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is

intended to permit BSREP II Grand Avenue, LLC c/o Cushman and Wakefield to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property (1) due to a release to the environment, (2) under conditions that indicate an existing release or a past release, or (3) under conditions that pose a material threat of a future release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term does not include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the standard environmental record sources and municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. EBI relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct unless the information is known to be inaccurate or if it is obvious, based on other information obtained as part of the assessment, that the information is not accurate. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to verify independently the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The information reported, as well as EBI's findings, conclusions, and recommendations are based upon sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with authorities having jurisdiction over the Subject Property. BSREP II Grand Avenue, LLC c/o Cushman and Wakefield agrees that EBI has no obligation to independently verify the accuracy or completeness of the information reviewed or received during the course of these environmental services.

EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under un-surveyed and/or inaccessible portions of the Subject Property. Unsurveyed and inaccessible portions of the Subject Property are described below. In addition, EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under the Subject Property where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

EBI Services and opinions are based on the scientific or technical tests or procedures specifically set forth in the scope of the Services described in this report. The ASTM Standard E 1527-13 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI used that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality at the same time and under similar circumstances. No other

representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by EBI. Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified if necessary, at additional cost.

Client and EBI agree that to the fullest extent permitted by law, EBI shall not be liable to Client for any special, indirect, consequential, punitive, exemplary, incidental or indirect damages or losses whatsoever, whether caused by EBI's negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions.

1.4 SPECIAL TERMS AND CONDITIONS

The exclusive purpose of this Phase I Environmental Site Assessment (the Report) is to observe the general physical condition and maintenance status of the property, to suggest repair or maintenance items considered customary for the property to continue in its current operation compared to properties of similar age and condition, and to assist BSREP II Grand Avenue, LLC c/o Cushman and Wakefield, in its pre-sale effort in evaluating their Property. Amendments to EBI's limitations as stated herein that may occur after issuance of the Report are considered to be included in this Report. EBI's liability to a purchaser wishing to use this Report is limited to the cost of the Report. By accepting draft and final Reports, BSREP II Grand Avenue, LLC c/o Cushman and Wakefield agrees to these terms and limitations.

1.5 DATA GAPS

Any data gaps identified herein, as defined by ASTM Practice E 1527-13 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report,.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 OWNERSHIP AND LOCATION

According to the Los Angeles County Assessor's Office, the Subject Property is currently owned by BSREP II Grand Avenue LLC.

The Subject Property is located at 1960 E Grand Avenue in El Segundo, Los Angeles County, California. The Subject Property includes two contiguous rectangular-shaped parcels, identified by the Los Angeles County Assessor's Office as Map 4138, Parcel 7, Lot 65, and Map 4138, Parcel 7, Lot 66, cumulatively totaling approximately 5.37 acres. The Subject Property is located approximately 540 feet east of the intersection of East Grand Avenue and Sepulveda Boulevard. Figure 1 - Location Map depicts the location of the Subject Property on a street map of El Segundo, California. Figure 2 - Locus Map depicts the location of the Subject Property on the Venice, California United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle. Figure 3 - Site Plan depicts the configuration of the Subject Property and adjoining properties.

2.2 SUBJECT PROPERTY IMPROVEMENTS

The Subject Property is currently improved with a 12-story, multi-tenant office building, with a net-rentable area of approximately 257,937± square feet and a nine-story parking garage with two sub-levels. There is no basement present beneath the office structure. The existing improvements were constructed in 1987.

The existing office building is located on the eastern portion of the property. Areas of the Subject Property surrounding the existing building include the following: one 11-story parking garage with two subterranean levels, located on the southwestern portion of the Subject Property; asphalt-paved surface parking, located along the north, east, and west sides of the building; concrete walkways, located throughout the Subject Property; and, landscaping surrounding the building. Land and building areas are as follows:

SUBJECT PROPERTY IMPROVEMENTS					
Address	**Floors**	**Basement**	**Area (SF)**	**DOC**	**Lot Size (Acres)**
1960 East Grand Avenue, Office Tower	12	No	257,937	1987	5.37
1940 East Grand Avenue, Parking Garage	11	Yes	246,126	1987	inclusive

SF: Square Feet DOC: Date of Construction

2.3 CURRENT USE OF THE SUBJECT PROPERTY

At the time of assessment, the Subject Property was occupied by 56 office tenants. Twenty-three vacant tenant spaces were identified at the time of assessment. There are currently no manufacturing or industrial operations conducted at the Subject Property. EBI was provided with a copy of the most recent tenant list, which is presented in Appendix C. Select current tenants and associated operations are summarized in the table below.

CURRENT OCCUPANTS AND OPERATIONS			
Occupant	**Location**	**Operations**	**Notable Hazardous Substances / Petroleum Products Identified**
Vacant	100	NA	No
CyberCity 3D, Inc.	280	Office space	No
Cushman & Wakefield	420	Office space	No
Dermstore	600	Office space	No
Union of American Physicians and Dentists	810	Office space	No
Columbus Technologies and Services, Inc.	1000	Office space	No
Donahue & Horrow, LLP	1215	Office space	No

2.4 MUNICIPAL SERVICES & UTILITIES

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	**Provider/Source**
Potable Water Supply	City of El Segundo
Sewage Disposal System	City of El Segundo
Electrical Service	Southern California Edison
Natural Gas Service	Southern California Gas
Oil Service	Not provided
Heating/Cooling Systems	Natural gas water heaters located in the rooftop mechanical penthouse deliver heated water to VAV boxes above the tenant ceiling spaces and an electric cooling tower supplies cooled air to VAV boxes above the tenant ceiling spaces.
Emergency Power	One diesel-fired emergency generator with a self-contained fuel tank.

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Subject Property is primarily characterized by retail/commercial development.

ADJOINING PROPERTIES	
Direction	**Findings**
North	The Subject Property is bound to the north by East Grand Avenue, beyond which is Mattel (1955 East Grand Avenue) and a multi-tenant office complex (300 North Sepulveda Boulevard).
South	The Subject Property is bound to the south by commercial development (101 Continental Boulevard).
East	The Subject Property is bound to the east by multi-tenant commercial structures (1990 East Grand Avenue and 201 Continental Boulevard).
West	The Subject Property is bound to the west by a parking garage (222 North Sepulveda Boulevard).

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties. Adjacent properties identified in the database report are further discussed in Section 4.1.

2.6 PHYSICAL SETTING

2.6.1 Topography

The Subject Property is located at an elevation of approximately 118 feet above mean sea level (msl). The topography of the Subject Property is relatively flat. The Subject Property is located in an undulating area, and the general slope of the surrounding region is to the north (see Figure 2, which depicts the location of the Subject Property on the Venice, California USGS 7.5 Minute Topographic Quadrangle).

2.6.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Information concerning the geology of the Subject Property was obtained from the USGS Ground Water Atlas of the United States, California region (1995). The Subject Property is located within the Pacific Border physiographic province, which is characterized by steep rolling hills and mountains and consists of severely folded, faulted, commonly metamorphosed marine and continental sediments.

According to the Environmental Data Resources, Inc. (EDR) GeoCheck Physical Setting Source Summary, the dominant soil composition in the vicinity of the Subject Property is classified as Delhi. This soil consists of somewhat excessively well drained soil extending to a depth of more than 60 inches.

2.6.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. There are no downgradient water bodies within one mile of the Subject Property.

Local groundwater gradient is typically expected to follow surface topography; however, the absence of a distinct ground surface slope at the Subject Property prevents estimation of groundwater flow direction by this method. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by BSREP II Grand Avenue, LLC c/o Cushman and Wakefield with regard to this Phase I Environmental Site Assessment. Additionally, a User Questionnaire was forwarded to the designated client contact. The User Questionnaire has been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The User Questionnaire and any additional documentation referenced below is presented in Appendix C.

3.1 TITLE RECORDS

Title record information associated with the Subject Property has not been provided to EBI by BSREP II Grand Avenue, LLC c/o Cushman and Wakefield. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.2.3 of this report.

3.2 ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS

BSREP II Grand Avenue, LLC c/o Cushman and Wakefield has provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A discussion regarding environmental liens is presented in Section 4.2.5 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 SPECIALIZED KNOWLEDGE

BSREP II Grand Avenue, LLC c/o Cushman and Wakefield provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. EBI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.2.6 of this report.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

BSREP II Grand Avenue, LLC c/o Cushman and Wakefield has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

BSREP II Grand Avenue, LLC c/o Cushman and Wakefield has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

BSREP II Grand Avenue, LLC c/o Cushman and Wakefield provided contact information for the Subject Property owner, manager and/or occupants.

3.7 REASON FOR PERFORMING PHASE I ESA

BSREP II Grand Avenue, LLC c/o Cushman and Wakefield retained EBI to complete this Phase I Environmental Site Assessment in connection with a real estate transaction.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-13, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix E.

The database report identified six "orphan sites". Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. EBI attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, EBI did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, EBI uses the best available data when evaluating the location of listed sites discussed below.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed in the sections below. Properties that are identified within the database report that are not discussed further in the sections below are not considered to be a concern to the Subject Property based on one or more of the following rationale: absence of reported releases, current regulatory status, distance, presumed hydrogeologic gradient and/or nature/extent of contamination.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS

4.1.1 Federal Agency Database Records

National Priority List (NPL)
The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act.

Delisted National Priority List (NPL)
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Superfund Enterprise Management System (SEMS)
SEMS tracks federal hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of the USEPA's Superfund Program. The list was formerly known as CERCLIS and was renamed at the end of 2015. The list contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). SEMS also contains sites that are either proposed to or on the National Priority List (NPL), as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

SEMS - ARCHIVE
SEMS - ARCHIVE tracks sites that have been removed from the SEMS list. This list was formerly known as the CERCLIS- NFRAP list and was renamed SEMS - Archive at the end of 2015. SEMS-ARCHIVE sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration.

Resource Conservation and Recovery Act (RCRA) - Corrective Action Tracking System (CORRACTS)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and

Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities
RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA).

RCRA Hazardous Waste Generators
Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month.

Federal Engineering Control / Institutional Control Registries
The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Emergency Response Notification System (ERNS)
ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property.

Comments:	SEMS - ARCHIVE: Discovery: 05/21/1991 Preliminary Assessment: Not reported Status: SEMS-ARCHIVE CORRACTS / RCRA-TSDF- (21) Violations: 09/06/1989 â€“ 06/22/2006 Dates of Compliance: 11/18/1991 â€“ 07/21/2006 Based upon the current regulatory status, distance and expected hydrogeologic gradient relative to the Subject Property, the identified facility does not represent an environmental concern to the Subject Property.

Federal Agency Database Records Summary

The remaining identified Federal Agency Database listings are not considered an environmental concern to the Subject Property based on one or more of the following rationale: absence of reported releases, current regulatory status, distance, presumed hydrogeologic gradient and/or nature/extent of contamination.

4.1.2 State and Tribal Agency Database Records

Annual Workplan Sites (AWP)
The California Department of Toxic Substance Control (DTSC) Annual Workplan Sites (AWP) identifies known hazardous substance release sites targeted for cleanup. The data source is the California Environmental Protection Agency.

California Hazardous Waste Sites (CalSites)
The California Hazardous Waste Sites (CalSites) database contains potential or confirmed hazardous substance release sites identified by the California Department of Toxic Substance Control (DTSC).

Proposition 65 Notification Records
Proposition 65 Notification Records contain facility notifications regarding any release that could potentially impact drinking water and thereby expose the public to a potential health risk.

Toxic Pits Cleanup Act Sites (Toxic Pits)
The Toxic Pits Cleanup Act Sites (Toxic Pits) database contains sites identified by the California Water Resources Control Board that are suspected to contain hazardous substances where cleanup has not yet been completed.

California Bond Expenditure Plan
The California Bond Expenditure Plan was developed by the California Department of Health Services as a site-specific expenditure plan for the appropriation of Hazardous Substance Cleanup Bond Act funds.

Hazardous Waste and Substances Sites List (Cortese)
The Hazardous Waste and Substance Site List (also known as the Cortese List) is a planning document used by the State, local agencies, and developers to comply with California Environmental Quality Act requirements in providing information regarding the location of hazardous materials releases. Government Code Section 65962.5 requires the California Environmental Protection Agency to develop at least annually an updated Cortese List. The California Department of Toxic Substance Control (DTSC) is responsible for preparing a portion of the information that comprises the Cortese List, and other state and local government agencies are required to provide additional hazardous material release information for the Cortese List.

Spill, Leaks, Investigations, and Cleanup (SLIC)
The Spills, Leaks, Investigations, and Cleanups (SLIC) database, maintained by the California Water Resources Control Board, includes unauthorized discharges from spills and leaks, other than from underground storage tanks or other regulated sites.

Regional Water Quality Control Board (RWQCB) - Leaking Underground Storage Tanks (LUST)
The Regional Water Quality Control Board (RWQCB) maintains a database of reported Leaking Underground Storage Tank (LUST) Sites.

Facility Inventory Database (FID UST)
The California Environmental Protection Agency maintains a Facility Inventory Database (FID), which contains a historical registry of active and inactive underground storage tank (UST) locations reported by the California Water Resource Control Board.

Hazardous Substance Storage Container Database (HIST UST)
The Hazardous Substance Storage Container Database is a historical listing of UST sites maintained by the California Water Resources Control Board.

Statewide Environmental Evaluation and Planning System (SWEEPS)
The Statewide Environmental Evaluation and Planning System (SWEEPS) is an underground storage tank database that was updated and maintained by a company contacted by the State Water Resource Control Board in the early 1980s. The listing no longer updated or maintained.

Solid Waste Information System (SWIS)
Solid Waste Information System (SWIS) records typically contain an inventory of solid waste facilities or landfills identified by the Integrated Waste Management Board. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Waste Management Unit Database / Solid Waste Assessment Test (WMUDS/SWAT)
The Waste Management Unit Database (WMUDS) is used by the California Water Resources Control Board and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

California Hazardous Material Incident Report System (CHMIRS)
The California Hazardous Material Incident Report System (CHMIRS) contains information regarding reported hazardous material incidents (i.e. accidental releases or spills). The data source is the California Office of Emergency Services.

Hazardous Waste Information system (HAZNET)

The California Environmental Protection Agency maintains a list of facilities that issue hazardous waste manifests. The source of the manifest records is the California Department of Toxic Substance Control (DTSC). Inclusion on the HAZNET database does not necessarily indicate the existence of an environmental concern, such as a release or spill incident.

Tribal Environmental Databases

The United States Bureau of Indian Affairs (BIA) is responsible for the administration and management of 55.7 million acres of land held in trust by the United States for American Indians, Indian tribes, and Alaska Natives. There are 562 federally recognized tribal governments in the United States. The environmental database report identifies tribal administered lands of the United States that have any area equal to or greater than 640 acres.

State and Tribal Agency Database Records Summary

The remaining identified State and Tribal Agency Database listings are not considered an environmental concern to the Subject Property based on one or more of the following rationale: absence of reported releases, current regulatory status, distance, presumed hydrogeologic gradient and/or nature/extent of contamination.

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the following:

City of El Segundo Building Department
EBI reviewed available files regarding the Subject Property at the City of El Segundo Building Department for information regarding past uses of the Subject Property. The original building permits and certificates of occupancy for the existing building were not readily available for review. The review of Building Department records did not identify past uses of the Subject Property that would constitute a recognized environmental condition.

City of El Segundo Fire Department
EBI has submitted a written request to City of El Segundo Fire Department for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). As of the date of this report, EBI has not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this report, EBI will forward this information as an addendum to this report. If no response is received, or no material information is identified, our report will not be modified.

Department of Toxic Substance Control (DTSC)
EBI reviewed available information posted on the DTSC website, http://www.envirostor.dtsc.ca.gov/public/search.asp?basic=True. The Subject Property was not identified as a cleanup site.

Regional Water Quality Control Board
EBI reviewed available information posted on the Regional Water Quality Control Board, Geotracker website, http://geotracker.waterboards.ca.gov/. The Subject Property is not listed as a UST, LUST, Spills, or Other Cleanup site.

4.1.4 Vapor Migration

EBI conducted a vapor migration screening survey of the Subject Property. EBI's site observations and review of the environmental database report (cited in Section 4.1) did not identify any conditions on the Subject Property or on adjoining properties that would indicate a REC relative to vapor migration at the Subject Property.

This vapor migration screening was conducted in accordance with ASTM E1527-13 and is not intended to satisfy the requirements of ASTM E2600-15. The scope of this screening was limited to visual observations and review of the environmental database report and did not include the collection and laboratory analysis of air samples to confirm or refute the presence of airborne contaminants by vapor intrusion.

4.2 HISTORICAL USE OF THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

EBI attempted to determine the history of the Subject Property dating back to 1940 or first developed use.

No environmentally significant conditions were identified on the Subject Property or surrounding properties during the historical review. The historical use of the Subject Property and surrounding area is summarized in the following sections.

4.2.1 Aerial Photographs and Maps

Historical aerial photographs and historical fire insurance maps may be used to evaluate changes in land use and to identify visible/labeled areas of potential environmental concern. Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical aerial photographs, historical fire insurance maps and historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). The EDR Report indicated that fire insurance map coverage for the vicinity of the Subject Property was not available. A copy of the search documentation letter is presented in Appendix F. Historical images depicting the Subject Property reviewed are summarized in the following table. Copies of the images are presented in Appendix F.

AERIAL PHOTOGRAPH AND MAP SUMMARY			
Period	**Subject Property Historical Uses**	**Surrounding Area Historical Uses**	**Source(s)**
1896	No structures or other notable features are depicted on the Subject Property.	No structures or other notable features are depicted on the surrounding properties to the north, east, south, and west.	Topographic Maps
1923	The Subject Property appears to consist of cleared, undeveloped land.	The surrounding properties to the north, east, south, and west are cleared, undeveloped land.	Aerial Photographs
1924	No structures or other notable features are depicted on the Subject Property.	No structures or other notable features are depicted on the surrounding properties to the north, east, south, and west.	Topographic Maps
1928	Conditions on the Subject Property appear to be similar to those depicted on the 1923 photograph, with the exception that a small structure and what appears to be a pond are visible on the northern portion of the Subject Property.	Conditions on the surrounding properties appear to be similar to those depicted on the 1923 photograph, with the exception that small structures are visible on the surrounding properties to the north and east.	Aerial Photographs
1930	No structures or other notable features are depicted on the Subject Property.	No structures or other notable features are depicted on the surrounding properties to the north, east, south, and west.	Topographic Maps
1938	Conditions on the Subject Property appear to be similar to those depicted in the 1928 photograph, with the exception that a structure is visible on the southeastern portion of the Subject Property.	Conditions on the surrounding properties appear to be similar to those depicted in the 1928 photograph, with the exception that a structure, apparently an oil derrick, is visible on the property to the west.	Aerial Photographs
1948	No structures or other notable features are depicted on the Subject Property.	No structures or other notable features are depicted on the surrounding properties to the north, east, south, and west.	Topographic Maps
1950	Access roads are depicted running across the Subject Property.	Conditions on the surrounding properties appear to be similar to those depicted on the 1948 map, with the exception that small roadways are depicted on the properties to the east, south, and west. Small structures are depicted	Topographic Maps

		on the properties to the east, and a substation is identified on the property to the west.	
1947, 1953	Conditions on the Subject Property appear to be similar to those depicted in the 1928 photograph, with the exception that a structure is visible on the southeastern portion of the Subject Property.	Conditions on the surrounding properties appear to be similar to those depicted in the 1928 photograph, with the exception that a structure, apparently an oil derrick, is visible on the property to the west.	Aerial Photographs
1963	No structures or other notable features are visible on the Subject Property.	No structures or other notable features are visible on the surrounding properties to the north, east, south, and west.	Aerial Photographs
1964	Conditions on the Subject Property appear to be similar to those depicted on the 1950 map.	Conditions on the surrounding properties appear to be similar to those depicted on the 1950 map, with the exception that oil wells are identified to the northeast of the Subject Property.	Topographic Maps
1972	Conditions on the Subject Property appear to be similar to those depicted in the 1963 photograph.	A roadway, trending east to west, is visible to the north, beyond which is vacant land. A paved parking lot is visible to the south. No structures or other notable features are depicted on the properties to the east and west.	Aerial Photographs
1972, 1981	No structures or other notable features are depicted on the Subject Property.	A roadway, trending east to west, is depicted to the north. No structures or other notable features are depicted on the surrounding properties to the east, south, and west.	Topographic Maps
1983	The Subject Property appears to be occupied by a parking lot.	Conditions on the surrounding properties appear to be similar to those depicted in the 1972 photograph, with the exception that commercial structures are visible to the east and west. A commercial structure is visible beyond the roadway to the north.	Aerial Photographs
1989, 1994, 2005	A rectangular commercial structure is visible on the northeastern portion of the Subject Property, with a second commercial structure, a parking garage, on the southwestern portion of the Subject Property. The northwestern portion of the Subject Property appears to be occupied by a paved parking lot. Landscaping is visible on the southeastern portion of the Subject Property.	Conditions on the surrounding properties appear to be similar to those depicted in the 1983 photograph.	Aerial Photographs
2012	The map depicts topography and infrastructure; distinct buildings are not shown.	The map depicts topography and infrastructure; distinct buildings are not shown.	Topographic Maps
2016	The Subject Property appears as it does today with the existing office development and parking structure.	Surrounding properties appear as they do today as described in Section 2.5.	Aerial Photographs

4.2.2 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix F.

STREET DIRECTORY SUMMARY		
Year	**Issues Noted**	**Occupants**
1990, 1991, 1995, 2000, 2001, 2010, 2014	No	Various office tenants.

4.2.3 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.2.4 Property Tax Records

Property records for the Subject Property were obtained at the Los Angeles County Assessor's Office. The property records identify the current owner as BSREP II Grand Avenue LLC. Assessor's Office records indicate that the existing buildings were constructed in 1987. A listing of the former Subject Property owners was not available for review.

4.2.5 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.2.6 Previous Environmental Reports

EBI was provided with the following previous environmental reports performed for the Subject Property. Relevant information from the previous reports is discussed in the appropriate sections of this report, and portions of the previous reports are presented in Appendix H.

Phase I Environmental Site Assessment, Grand Avenue Courtyard, 1960 East Grand Avenue, El Segundo, California, prepared by EBI Consulting, Inc. (EBI) of Burlington, Massachusetts, dated February 13, 2017

The EBI Report was completed in general conformance with ASTM Standard E 1527-13. The scope of the EBI Report investigation included visual reconnaissance of the Subject Property, interviews with knowledgeable persons associated with the Subject Property, review of available regulatory information contained within federal and state environmental databases and other local environmental records, review of the physical characteristics and history of the Subject Property, and a limited visual survey for the presence of asbestos-containing materials (ACM). The following information was presented in the EBI Report:

- At the time of the EBI Report, the Subject Property was improved with one office building and a parking garage which were constructed in 1987. The subject buildings are situated on two parcels, comprising approximately 5.37-acres.

- At the time of assessment, the existing structure was occupied by 63 commercial office tenants. No industrial or manufacturing operations were observed at the Subject Property at the time of assessment.

- Based upon review of historical resources dating back to the 1890s (aerial photographs, USGS topographical maps), EBI reported that the Subject Property was vacant, undeveloped land prior to construction of the existing improvements in 1987.

- EBI did not identify evidence of existing or former underground storage tanks (USTs) at the Subject Property.

- EBI reported that two (2) 120-gallon diesel fuel aboveground storage tanks (ASTs) were in use to support the firewater pump system. The ASTs are located in the fire pump room on the first floor of the office building. EBI also identified one (1) 120-gallon diesel AST associated with an emergency generator. The AST is double-walled steel and is located below the generator in a room on the first floor of the building. No staining or other evidence of a release of diesel fuel was observed on the underlying concrete floors in the vicinity of the ASTs.

- EBI identified one electrical transformer room on the first floor of the office building. The transformer room was not accessible during the survey. EBI identified one pad-mounted transformer adjacent to the parking garage at the Subject Property. EBI reported that no staining or other evidence of a release of dielectric fluid was observed in the vicinity of the transformer room or transformers. EBI did not observe labeling on the transformers identifying PCB content. EBI reported that the transformers were owned and operated by the public electrical utility company, Southern California Edison.

- EBI reported that the office building was serviced by five overhead traction elevators; and, the parking garage was serviced by two overhead traction elevators.

- EBI reported that hazardous substances and/or petroleum products identified at the Subject Property was limited to commonly available janitorial and cleaning supplies located in the storage shed, storage rooms, and maintenance office, including interior latex paint, mineral spirits, household cleaners, and water treatment chemicals associated with the closed-loop heating/cooling system. Areas of chemical storage were reported to be well maintained and free of spills, staining, or other indications of a release.

- EBI reviewed previous Phase I ESA reports (Clayton - January 2007, AECOM - August 2010, EBI - October 2016), and a letter prepared by Krazan & Associates, Inc. (Krazan), addressing concentrations of petroleum hydrocarbons previously detected in soil at the Subject Property. According to Krazan, soil samples collected from the site in July 2008 were submitted for laboratory analysis of total recoverable petroleum hydrocarbons (TRPH). The laboratory results identified TRPH at a concentration of 43 milligrams per kilogram (mg/kg) in soil. Krazan concluded that the TRPH encountered was insignificant. The prior Clayton report stated that petroleum hydrocarbon odors and stains were noted at the property during soil sampling from 1981 through 1986, prior to development. The contamination was deemed to be associated with the historical use of the property and immediate vicinity as part of an oil field in approximately the 1920s through the 1950s. Based upon review of available information, the historic contamination identified on the Subject Property is considered to represent a *de minimis* condition and no further action is recommended.

- Based upon review of the environmental database report, EBI identified no on-site or off-site facilities that were considered likely to have impacted the Subject Property.

- EBI conducted a limited visual survey for the presence of asbestos-containing materials (ACM). The following suspect materials were identified: sheetrock/joint compound composite material and 2'x4' white perforated acoustical ceiling tile, vinyl floor tile and associated mastic, sheet vinyl flooring and associated mastic, and various construction mastics and caulking. These materials were observed to be undamaged and in good condition at the time of assessment.

Based upon the findings of the Phase I Environmental Site Assessment, EBI did not identify any recognized environmental conditions (RECs) associated with the Subject Property. EBI recommended no further action or investigation.

4.2.7 Other Historical Records and Interviews

Mr. Rodger Aube, Building Engineer, was interviewed to obtain information regarding the history of the Subject Property. Mr. Aube reported that he has been familiar with the Subject Property for less than a year and that the existing building was constructed in 1987. Mr. Aube was unaware of any spills, leaks or other hazardous materials incidences having occurred on the Subject Property.

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mike Monis, EBI Field Assessor, on October 3, 2019. Mr. Monis was accompanied by and interviewed Mr. Rodger Aube, the Subject Property Building Engineer.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was sunny and approximately 65º Fahrenheit. During the survey, representative common areas, office units, mechanical spaces, and/or equipment and building components were observed, and approximately 10% of the units were surveyed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Notable hazardous substances or petroleum products in connection with identified uses observed at the Subject Property are described below.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS			
General Type of Material	**Approximate Quantity / Container / Material**	**Location**	**Storage Condition**
Cleaning Compounds and Janitorial Supplies	Various sized containers, ranging from aerosol cans to five-gallon pails	Janitorial Closets and Maintenance Shed	Good: No leaks or spills
HVAC Treatment Compounds	(2) 45-gallon drums: anti-freeze and microbicides (3) 5-gallon pails: microbicides	Mechanical Penthouse	Good: No leaks or spills

EBI did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property. The facility maintains a Spill Prevention, Control and Countermeasure (SPCC) Plan for handling materials in use at the Subject Property. It should be noted that a compliance audit was beyond the scope of work for this assessment and was not performed.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

EBI did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

5.2.3 Unidentified Substances Containers

EBI did not observe evidence of unidentified substances containers at the Subject Property.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

EBI identified the following waste streams generated at the Subject Property:

WASTE GENERATION, STORAGE, AND DISPOSAL			
Classification	**Type of Waste / Generation Process**	**Type of Storage / Location**	**Disposal Method / Contractor**
Non-regulated Solid Waste	Municipal Solid Waste / Routine Site Operations	2 Solid Waste Dumpsters (Trash Storage Room)	Athens Services
Non-regulated Solid Waste	Cardboard Recyclables / Routine Site Operations	1 Recycling Dumpster (Trash Storage Room)	Contracted service provider
Non-regulated Liquid Waste	Sanitary Sewage / Routine Site Operations	NA (Municipal Sanitary Sewer)	City of El Segundo
Regulated Solid or Liquid Waste	Spent fluorescent tubes, ballasts, and lead-acid batteries / Routine Site Operations and Maintenance	Cardboard Bins (Receiving Dock)	Contracted service provider
Biomedical Waste	None identified	NA	NA

No evidence of improper solid waste management or the improper disposal of hazardous substances or petroleum products was observed at the time of reconnaissance.

5.4 UNDERGROUND STORAGE TANKS (USTS) & ABOVEGROUND STORAGE TANKS (ASTS)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of existing USTs located at the Subject Property. EBI identified the following ASTs located at the Subject Property.

STORAGE TANKS						
Capacity	**Contents**	**Location**	**Year Installed**	**Construction Materials**	**Leak Detection / Prevention**	**Staining / Releases**
(2) 120-gallon ASTs	Diesel Fuel	Ground Floor Fire Pump Room	Unknown	Single-wall steel tank(s)	Concrete block secondary containment basin	None
(1) 120-gallon AST	Diesel Fuel	Ground Floor Emergency Generator Room	Unknown	Single-wall steel tank(s)	Concrete block secondary containment basin	None

Two diesel-fired fire pumps and associated 120-gallon ASTs are located on the ground floor of the existing office building. The fire pumps and ASTs are surrounded by a concrete secondary containment basin. No staining or other evidence of a release of diesel fuel was observed on the underlying concrete floor.

One diesel-fired emergency generator and associated 120-gallon AST are located on the ground floor of the existing office building. The generator and AST are surrounded by a concrete secondary containment basin. No staining or other evidence of a release of diesel fuel was observed on the underlying concrete floor.

5.4.2 Former Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of former USTs or ASTs located at the Subject Property.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBS)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which

enacted the Toxic Substance and Control Act (TSCA). In accordance with US Code of Federal Regulations Title 40 - Protection of Environment, Chapter 1 - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

Based upon the date of construction (1987), no potential PCB-containing equipment was identified at the Subject Property. However, the following oil-containing equipment was identified at the Subject Property:

OIL-CONTAINING EQUIPMENT			
Classification	**Type of Equipment**	**Year Installed / Location**	**Staining / Releases Identified**
Transformers and Fluid-Containing Electrical Equipment	(1) Electrical Transformer [Southern California Edison]	1987 / Transformer vault, Ground Floor of office building	No
Transformers and Fluid-Containing Electrical Equipment	(1) Pad-mounted Electrical Transformer [Southern California Edison]	1987 / North of Parking Garage	No

EBI observed one pad-mounted electrical transformer located on the central portion of the Subject Property, adjacent to the parking garage. The transformer appeared to be in good condition, and no staining or other evidence of a release of dielectric fluid was observed in the vicinity of the transformer unit. The transformer unit is owned and operated by the regional electrical utility provider, Southern California Edison. In the event of a release of dielectric fluid from one of its transformers, the utility company typically conducts regulatory response actions and cleanup.

One electric transformer is reportedly located within a utility vault on the eastern side of the ground floor of the office building. The transformer unit is reportedly owned and operated by the regional electrical utility provider, Southern California Edison. The transformer vault was sealed by the electric utility and was not accessible at the time of reconnaissance. In the event of a release of dielectric fluid from one of its transformers, the utility company typically conducts regulatory response actions and cleanup

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Subject Property on the day of the site visit. Photographs of pertinent Subject Property features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS	
Condition	**Identified**
Interior Drains, Trenches, or Sumps	Yes
Interior Stains or Corrosion	No
Unusual Odors	No
Interior Pools of Liquid	No
Stained Soil or Pavement	No
Stressed Vegetation	No
Indications of Solid Waste Disposal	No
Exterior Pits, Ponds, or Lagoons	Yes
Wastewater or Stormwater Discharge/Disposal	Yes
Oil-Water Separators or Clarifiers	No
Septic Systems or Cesspools	No
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	No
Petroleum or Natural Gas Pipelines/Easements	No

Floor drains were observed in the restrooms. Floor drains and a sump pit were also observed in the parking garage. The floor drains and sump pit reportedly discharge to the municipal sewer system. No staining or other evidence of a release of hazardous substances or petroleum products was observed in the vicinity of these structures.

A decorative pond is located on the southeastern portion of the Subject Property. No staining or other evidence of a release was observed in the vicinity of this feature.

The ground surface outside the building is relatively flat. Stormwater runoff from the asphalt-paved parking areas on the northwestern and eastern portions of the Subject Property discharges to catch basins located along Grand Avenue. The catch basins are associated with the municipal stormwater sewerage system, operated by the City of El Segundo. No staining or other evidence of a release of hazardous substances or petroleum products was observed in the vicinity of the stormwater drainage features.

6.0 INTERVIEWS

The site contact or Key Site Manager was contacted to be interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The Pre-Survey Questionnaire and any accompanying documentation is presented in Appendix C.

INTERVIEWS			
Contact / Affiliation	**Date of Communication**	**Years Associated with the Subject Property**	**Telephone No.**
Mr. Rodger Aube Chief Engineer Able Services	10/03/2019	<1	310.414.0014
Ms. Ivy Le Property Manager Cushman & Wakefield	10/03/2019	2	310.414.0014

Pertinent information from the interviews is presented in applicable sections of this report.

7.0 CONSIDERATIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

The following sections address environmental issues or considerations at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-13 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those that can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

Based upon the date of construction (1987) and in accordance with the scope of work for this assessment, EBI did not conduct a survey for the presence of ACM.

7.2 RADON

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building through openings in the foundation, and therefore is a potential health concern to residents of the lowest level of a building with inadequate ventilation.

The EPA Map of Radon Zones indicates that Los Angeles County is located within a Zone 2 radon area. Zone 2 is defined as an area that has a moderate potential for radon gas, with a predicted average indoor radon screening level between 2.0 picoCuries per liter (pCi/L) and 4.0 pCi/L. The EPA recommended Action Level for radon is 4.0 pCi/L.

Based upon the non-residential nature of the Subject Property and in accordance with the scope of work for this assessment, EBI did not conduct a limited short-term radon screening at the Subject Property.

7.3 LEAD-BASED PAINT (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm^2) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the non-residential use of the existing buildings and in accordance with the scope of work of this assessment, a lead-based paint (LBP) screening was not conducted at the Subject Property.

7.4 LEAD IN DRINKING WATER

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L).

Municipal water service is provided to the Subject Property by the City of El Segundo. Potable water is reportedly obtained from West Basin Municipal Water District, who in turn receives its water from the Metropolitan Water District of Southern California (MWD). MWD's water sources include both the

Colorado River and from the Sacramento-San Joaquin Delta in Northern California. Based upon review of the 2019 Annual Drinking Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.

8.0 FINDINGS AND OPINIONS

This assessment has identified no evidence of *recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs),* or *considerations outside the scope of ASTM Practice E 1527-13* in connection with the Subject Property.

The following *de minimis conditions* were identified:

- EBI identified a letter, prepared by Krazan & Associates, Inc. (Krazan), addressing concentrations ofpetroleum hydrocarbons previously detected in soils at the Subject Property. Soil samples collected from the site in July 2008 were submitted for laboratory analysis, and total recoverable petroleum hydrocarbons (TRPH) concentrations of 43 milligrams per kilogram (mg/kg) were reportedly found in the soil and were determined to be insignificant. This letter was also identified during a previous Phase I ESA performed by AECOM and further discussion of this letter is provided in Section 4.3.6. Additionally, the prior Clayton report indicates that odors and stains indicating petroleum hydrocarbon impacts were noted at the subject property during soil sampling from 1981 through 1986, prior to development of the Subject Property. The contamination was deemed to be associated with the historical use of the subject property and immediate vicinity as part of an oil field in approximately the 1920s through 1950s. Based upon review of available information, the historic contamination identified on the Subject Property is considered to represent a de minimis condition and no further action is recommended.

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, no further action is recommended.

Re: Property Condition Report & Environmental Site Assessment Questionnaire for property known as or located at

1960 E GRAND AVENUE

We have been requested by:	Subject:	EBI Project #:
Cushman and Wakefield	**To complete an Engineering and Environmental survey of the above mentioned property.**	**1119006294**

1. **Please read these instructions and those on the following page carefully.**
2. **Please assemble this original questionnaire and one copy of pertinent property documents, and forward all information to the site or the site contact for the Engineer and/or Scientist to use during the site visit. This documentation will be included in our reports.**
3. **Please fill out this questionnaire to the best of your knowledge and email or fax it back to us within three business days.**
4. **The Engineer and/or Scientist will contact you directly to schedule the site visit.**
5. **This information is extremely time sensitive and necessary to provide your lender with accurate and timely reports.**

EBI Consulting
environmental | engineering | due diligence

Please fill out and sign this questionnaire to the best of your knowledge for the Engineer's/Scientist's site visit. Email to **Caitlin Rasche** at REResearchGroup@ebiconsulting.com or fax to (781) 425-3623, for our report files, and keep the original to provide to the Engineer or Scientist.

Subject Property Name: 1960 E Grand Avenue **EBI Project #:** 1119006294

PROPERTY CONDITION REPORT PRE-SURVEY QUESTIONNAIRE

Additional plans and documentation (see page 4) must be forwarded to the site for the Engineer during the survey. For questions not applicable please respond "N/A." Attach additional pages if necessary. This questionnaire and your responses will be included as an exhibit in the Engineer's report. Accurate and full completion is critical to a timely completion of our reports, and timely loan closing.

LOCAL JURISDICTIONAL INFORMATION

1. What is the property ID #, Lot and Block, or Township/Range ID #?
2. What is the legal Municipality or County that has jurisdiction over the property? Los Angeles
3. What is the assessors file ID number and tax file ID number if available? 4138-007-065, 4138-007-066

PROPERTY INFORMATION

4. What is the size of the subject property lot or lots, in acres? 5.37 acres
5. How many parking spaces (and HCP parking spaces) are present at the property? 839 (parking structure), 79 (surface lot), 19 (15 minute spaces)
6. How many buildings comprise the subject property? One commercial office property & one parking structure
   a. If the property is a mall or large retail center, please confirm and list ownership of each building. NA
7. What is the gross and net rentable square footage of the building(s)? 260,352 RSF
8. What is the date of construction of the building(s)? When was the building(s) first occupied? 1987 (construction), 1988 (occupancy)
9. How many tenant spaces or apartments are at the Subject Property? 66 tenant spaces
   a. If the property is apartments, please provide a unit and type count by bedroom and square feet.
10. Please list, to the best of your knowledge, any deficiencies or problems with the site, parking area, amenities or utilities. N/A
11. Please list, to the best of your knowledge, any structural, water infiltration, mold, roof, plumbing, HVAC, Fire Alarm or electrical deficiencies or problems. N/A

12. During the last five years, have any major capital improvements been made to the site or building(s)? If so, please explain, with the approximate cost. Riser repairs ($121K) completed 3/2018
Replacement of sprinkler fittings, nipples & heads - 5 floors ($20K) completed 2/2018

13.

Does the property have	Y or N	Does the property have	Y or N
Polybutylene piping	N	Compressed wood or composite board siding	N
Galvanized steel water lines	N	EIFS exterior finishes	
ABS sanitary lines	N	Fire Retardant Treated plywood	Y - Electrical room back
Aluminum branch wiring	N	Cadet/Encore electric heaters installed 1982-99	N
Omega (Central or CSC) brand sprinkler heads	N	GE or Hotpoint dishwashers installed 1983-89	

14. Please list any deficiencies noted during any Building, Fire or Health Department inspections in the last three years.

15. When were the fire alarm systems and/or sprinkler system (if any) last tested?

16. Please list the following utility providers:

Electricity: Southern California Edison

Water: City of El Segundo

Storm Drainage:

Sanitary Sewer: City of El Segundo

Natural Gas or Oil: Southern California Gas

Trash Hauler: Anderson Partners and, Frequency of Pick-ups:

17. If you are performing or planning any repairs or replacement work to the property that will exceed an aggregate cost of $2,000 please explain, with the approximate cost.

18. Please list the responsible party for tenant improvements and maintenance of major systems (if applicable).

18. Please attach a brief history of the property. This information helps us properly assess, evaluate and understand your property, and will assist in the financial analysis. The information should include:

- The date of approvals and construction, the contractor who built the property
- History of major capital improvements, repairs, additions or modifications
- History of fires or violations
- A list of any ongoing maintenance issues
- Tenant history, approximate turnover rate

DOCUMENT AND INFORMATION CHECKLIST

Please provide the following information (as much as possible in electronic format) so the Engineer or Scientist can proceed with the survey of the property. Asterisk (*) items are critical to report completion. The documents will become exhibits in the Consultant's report.

A. Plans	B. Municipal Documents	C. Additional Information
▪ ALTA Survey or Site Plan* ▪ Architectural Building Plans* - plans, elevations, wall section, foundation, HVAC & elec. schedules ▪ Reduced scale Site and Building Plans ▪ ***Extremely critical for properties in Seismically active zones 3 and 4****	▪ Certificate of Occupancy* ▪ Building Permit* ▪ Façade inspection compliance* ▪ Copy of tax cards ▪ Copy of violations **B.1 NYC Projects**	▪ Capital expense report for 1 to 3 years* ▪ Tenant Rent Roll* ▪ Roof warranty ▪ History of recent improvements ▪ Schedule of Floor Area Measurements

*STRUCTURAL PLANS – **Seismic Assessments are required for these properties. Structural drawings must be provided at the time of the site visit. If no drawings are provided, the report will be delayed and the Seismic Assessment may be overly conservative.***	▪ Department of Building Violations* ▪ Environmental Control Board Violations* ▪ Local Law 11 Facade Reports*	- Gross and Rentable Square Feet ▪ Previous Due Diligence or Building Component Reports, including, but not limited to, façade*, roof*, mechanical*, electrical, elevator, sprinkler, fire alarm or life safety equipment, or pavement. ▪ Copy of most Recent Appraisal

EBI Access Requirements

At the time of the site visit the Consultant is required to gain access to all areas of the property. This includes:

- All building roofs, unless pitched asphalt shingles. This may require you to obtain and provide a ladder.
- All building perimeters
- All site amenities
- All building interiors, including as applicable, common areas, lobbies, a representative sampling of offices, retail spaces, manufacturing or assembly areas, or apartments, community rooms, exercise rooms, pool areas, storage rooms, attics and basements, garages.
- All mechanical, electric, sprinkler, HVAC, utility, service, elevator, storage and equipment rooms

ENVIRONMENTAL SITE ASSESSMENT PRE- SURVEY QUESTIONNAIRE

1. Describe the current uses of the property noting tenant names and oil/chemical usage. N/A

2. Describe the past uses of the property noting tenant names and oil/chemical usage. N/A

3. (Y) (N) Has a previous environmental site assessment report been prepared for the property? If yes, for what reason? Can EBI have a copy? Purchase of property; report performed by EBI consulting

4. (Y) (N) Has a subsurface investigation (Phase II) ever been conducted on the property, including soil sampling, groundwater sampling, or installation of groundwater monitoring wells? If yes, for what reason? What were the results? Can EBI have a copy of the report? Are there any groundwater monitoring wells currently located on the property?

5. (Y) (N) Has contamination been identified at the Subject Property? Describe the nature of the contamination (i.e., source, media impacted, location, sampling, cleanup activities, regulatory status, etc.). Can EBI have copies of related documentation? N/A

6. (Y) (N) Has a spill or surficial release occurred at the Subject Property? Describe the nature of the spill/surficial release (i.e., source, location, response/cleanup actions, regulatory status, etc.). Can EBI have copies of related documentation?

7. (Y) (N) Is the Subject Property listed with the USEPA and/or the state environmental regulatory agency as a contaminated site? If yes, please describe. Can EBI have copies of related documentation?

8. (Y) (N) Has there ever been previous sampling for Asbestos, Lead-Based Paint, Lead in Water, or Radon? If yes, please describe. Can EBI have copies of related documentation?

9. (Y) (N) Has there been any Asbestos or Lead-Based Paint abatement or Radon mitigation conducted at the Subject Property? Are there Asbestos and/or Lead-Based Paint Operations and Maintenance Plans for the Subject Property? If yes, please describe. Can EBI have copies of related documentation?

10. (Y) (N) Any known environmental liens, deed restrictions, or use limitations for the Property? If yes, please describe. Can EBI have copies of related documentation?

11. (Y) (N) Any permitted or regulated activities (Hazardous waste generator, air) on the Property? If yes, please describe. Emergency generator

12. (Y) (N) Are there any transformers or other electrical equipment, which may contain PCBs? If yes, please describe. Where are they? Who owns the transformer(s)? Who services them?

13. (Y) (N) Has an industrial or manufacturing operation, gas station, motor repair facility, commercial printing facility, dry cleaners, photo-developing laboratory, junk yard, landfill or waste, treatment, storage, disposal processing or recycling facility ever been located at **or** adjacent to the property? If yes, please describe.

14. (Y) (N) Are there any discarded drums, barrels or containers, construction debris, damaged or discarded automobile or industrial batteries, or pesticides, paints or other chemicals in individual containers or drums of greater than five gallons or fifty gallons in aggregate located on the property? If yes, please describe.

15. (Y) (N) Have there ever been any waste storage or treatment lagoons, pits, ponds, or surface impoundments on the property? If yes, please describe.

16. (Y) (N) Does the property have floor drains not discharging to a sewer? Septic System? If yes, please describe._____

17. (Y) (N) Are there currently aboveground or underground storage tanks at the property? If yes, complete table.

Type of Tank	Size	Content	Installation Date	Spill/Leak Detection? Y or N
Above or Underground	120 gal	Fire Pump Diesel #1	1987	Y
Above or Underground	120 gal	Fire Pump Diesel #2	1987	Y
Above or Underground	120 gal	Diesel Generator	1987	Y
Above or Underground	22500 gal	Sprinkler H_2O	1987	Auto shut offs

18. Are you aware of any information to indicate that the Subject Property was sold for substantially below its fair market value? If so, please provide an explanation: N/A

19. Additional comments and/or pertinent information relevant to this Phase I ESA:_____

DOCUMENT AND INFORMATION CHECKLIST

Please provide the following information (as much as possible in electronic format) so the Engineer or Scientist can proceed with the survey of the property. Asterisk (*) items are critical to report completion. The documents will become exhibits in the Consultant's report.

Re: Phase I ESA AAI User Questionnaire for property known as or located at:
1960 E Grand Avenue, El Segundo, California 90245

EBI Project #:
TBD

PHASE I ESA AAI USER QUESTIONNAIRE (ASTM E1527)

Dear User (Client),

Presented below is the User Questionnaire (as cited in the Appendix X3 of ASTM Standard E 1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process). This questionnaire is designed to address one of the requirements to satisfy the intent of the Standard, as noted in Section 1.1 of ASTM E 1527. Specifically, in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), **the User (the Client) of EBI's Phase I ESA report** must provide the information addressed below (if available) to EBI. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

To note, it is acceptable if you (the Client and User of this report) have no significant information regarding the questions below. The ASTM standard simply requires that we document your answers to this questionnaire. As such, the User Questionnaire can only be completed by the User (the Client). Please also note that EBI provides the site contact with a separate, **Pre-Survey Questionnaire**. This questionnaire is more detailed and documents their knowledge of the Subject Property.

Thank you,

EBI Consulting

ESA AAI USER QUESTIONNAIRE (ASTM E1527)

Subject Property Name: 1960 E Grand Avenue EBI Project #: TBD

Address: 1960 E Grand Avenue, El Segundo, California 90245

1. Are you aware of any environmental cleanup liens against the Subject Property that are filed or recorded under federal, tribal, state or local law?

   Yes / No / Unknown / Not Applicable

   If yes, please attach a copy.

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   Yes / No / Unknown / Not Applicable

   If yes, please attach a copy.

3. As the user of this ESA do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? Or, do you have documentation (i.e., Phase I ESAs, Phase II subsurface investigations, Tank Removal reports, remedial reports, asbestos sampling and/or abatement reports, lead-based paint sampling and/or abatement reports, etc.) for the Subject Property that may be relevant to the Phase I ESA?

   Yes / No / Unknown / Not Applicable

   Comments: See Phase I ESA completed by EBI consulting, dated February 13, 2017.

4. Does the purchase price being paid for this Subject Property reasonably reflect the fair market value of the Subject Property?

   Yes / No / Unknown / Not Applicable

   If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

   Yes / No

   Comments: _____

ESA AAI USER QUESTIONNAIRE (ASTM E1527)

5. Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of release or threatened releases? For example, as user,

   a. Do you know the past uses of the Subject Property? COMMERCIAL OFFICE BLDG
   b. Do you know the specific chemicals that are present or once were present at the Subject Property? NO
   c. Do you know of spills or other chemical releases that have taken place at the Subject Property? NO
   d. Do you know of any environmental cleanups that have taken place at the Subject Property? NO

   Comments: _____

   Please attach copies of previous environmental reports prepared for the Subject Property.

6. As the user of this ESA, based on your knowledge and experience related to the Subject Property are there any obvious indicators that point to the presence or likely presence of contamination at the Subject Property?

   Yes / (No) / Unknown / Not Applicable

   Comments: _____

Please be sure to attach copies of documentation, as available.

Michael Monis
Senior Scientist
21 B Street
Burlington, MA 01803
Office: 805-824-5925

SUMMARY OF EXPERIENCE

Mr. Michael Monis, Senior Scientist, has extensive experience in engineering, building assessment and environmental consulting in the governmental, public and private sector since 1998. His overall experience provides a unique background that allows him to provide thorough investigations and prompt reporting to the client.

He has successfully completed hundreds of project assignments including property transaction due diligence site assessments (Property Condition Assessment and/or Phase I Environmental Site Assessment), Environmental Impact Studies, subsurface investigations, underground storage tank removals, air monitoring projects, regulatory compliance audits, and asbestos surveys. Mr. Monis has also developed and implemented numerous Operations and Maintenance Plans for facilities containing asbestos, lead-based paint and/or mold.

Mr. Monis has completed advance training for Property Condition Assessments, Phase I Environmental Site Assessments, Mold and Indoor Air Quality (IAQ), and asbestos abatement oversight. Other training includes completing courses for AHERA Asbestos Inspector, Hazardous Waste Operator and Supervisor, and HUD MAP related training.

At EBI, Mr. Monis specializes in conducting property condition assessments, environmental site assessments, and site investigations for real estate owners, developers and investors.

RELEVANT PROJECT EXPERIENCE

Various Property Owners and Financial Institutions. Prepared property condition due diligence reports and environmental site assessments for numerous property owners and financial institutions for portfolios and individual projects throughout the country. Property types included multi-family residential, hotels, shopping centers/retail properties, industrial, office buildings, large-scale commercial developments, assisted living facilities, churches, telecommunications sites, and raw land. Clients have included J.P. Morgan, Comerica Bank, Citigroup, Prudential Mortgage Capital Company, CB Richard Ellis, Bank of America, Merrill Lynch, and Wells Fargo Bank.

Various Property Owners – Asbestos Building Surveys. Performed asbestos surveys and abatement projects for numerous public schools and commercial facilities throughout Southern California. Other services including abatement project monitoring, clearance testing, and the location and quantification of Asbestos Containing Materials (ACMS).

Various Property Owners – Microbial Assessments. Conducted microbial (mold and bacteria) assessments for various clients in Southern California. Assessments were conducted subsequent to water intrusion events, construction defects, receipt of insurance claims, as well as to investigate building health and safety issues. Projects have involved single- and multi-family residential properties, and commercial structures. Projects included the preparation of a scope of work, visual inspections and post-remediation sampling.

EDUCATION

B.A. Environmental Studies University of California, Santa Barbara

CERTIFICATES AND TRAINING

Advanced Property Condition Assessment Training Program, 2015 – EBI Consulting
Asbestos Building Inspector since 2003
Hazardous Waste Operator since 2000
Hazardous Waste Operator Supervisor since 2002
Microbial Investigations, Assessments and Remediation in the Indoor Environment – 2001
HUD MAP Advanced Architectural Engineering and Cost Analysis – 2008
HUD MAP Basic Advanced Valuation/Environmental – 2008

EBI CONSULTING
Creating Value for Your Business

Debra Bechtold
Senior Scientist

SUMMARY OF EXPERIENCE

Ms. Bechtold is a project manager and land use specialist with over 20 years of professional experience. She is responsible for conducting Phase I environmental site assessments. She has also performed Phase II Subsurface Investigations leading to site remediation. Ms. Bechtold is a California Registered Environmental Assessor II. She has completed the Certificate in Hazardous Materials Management from the University of California, Irvine.

RELEVANT PROJECT EXPERIENCE

- Prepared over 300 Phase I Environmental Site Assessments of residential, commercial and industrial properties throughout Southern California.
- Project manager for the I-710 Brownfields Study which consisted of 15 Preliminary Site Assessments, 10 Phase I Environmental Site Assessments and an Area Study encompassing 14 city blocks consisting of over 200 parcels.
- Managed numerous Phase II subsurface investigations; including groundwater investigations, working with professional geologists, engineers and chemists.
- Completed Phase III soil remediation projects involving soil excavation and disposal.
- Obtained regulatory closure for former gasoline service stations using natural attenuation modeling for underground storage tanks sites that impacted groundwater.
- Directed the installation, operation and maintenance of soil vapor extraction remediation systems for sites impacted by volatile organic compounds (i.e., dry cleaners and industrial facilities).
- Worked with local regulatory agencies including the Los Angeles Fire Department, Health Hazardous Materials Division, Los Angeles County Department of Public Works, Environmental Programs Division and the California Regional Water Quality Control Board.
- Participated in litigation support projects, specifically the technical review of environmental reports to determine the nature and extent of contamination and evaluation of remediation costs.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/25/2019 has revealed that there are 5 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/25/2019 has revealed that there is 1

RCRA-VSQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 27 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 17 CA LUST sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 3 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 21 CA UST sites within approximately 0.25 miles of the target property.

SPERRY GYROSCOPE COR		NNE 1/2 - 1 (0.952 mi.)	AH168	698

2020 COR ACTION: The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

A review of the 2020 COR ACTION list, as provided by EDR, and dated 09/30/2017 has revealed that there is 1 2020 COR ACTION site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.25 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

CA RGA LF: The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Resources Recycling and Recovery in California.

A review of the CA RGA LF list, as provided by EDR, has revealed that there are 2 CA RGA LF sites

within approximately 0.5 miles of the target property.

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there are 18 CA RGA LUST sites within approximately 0.5 miles of the target property.

FINDS:

Registry ID: 110002835175

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002889875

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002833596

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after

CONTINENTAL TOWER (Continued) **S113149990**

	October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 05/09/2019. Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. The UST system has audible/visual alarm as well as a positive shut-off mechanism (flapper-valve). The flapper-valve did not pass routine overfill prevention equipment test. Maintain overfill prevention system to comply with the deficiencies noted above. The facility shall replace the flapper-valve within 60 days and submit verification to ESFD.

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23,

CONTINENTAL TOWER (Continued) **S113149990**

	Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the double-walled pressurized piping to be continuously monitored with a system that activates an audible and visual alarm or stops flow at the dispenser when a leak is detected.
Violation Notes:	Returned to compliance on 09/12/2017. The piping sump sensor does not report to the monitoring panel, not providing leak detection for the secondary piping. Continuously monitor double-walled piping with a system that activates an audible and visual alarm or stops flow at dispenser when a leak is detected. Submit verification.
Violation Division:	El Segundo City Fire Department
Violation Program:	UST
Violation Source:	CERS
Site ID:	551223
Site Name:	Continental Tower
Violation Date:	08-07-2018
Citation:	23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description:	Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2).
Violation Notes:	Returned to compliance on 08/07/2018. Facility did not comply with one or more of the following DO monthly inspection requirements: Performed by an ICC certified DO; Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy; Inspect for the presence of liquid/debris in spill containers; Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit; Check that all testing and maintenance has been completed and documented; Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2). Facility did not attach an alarm history report print out for each DO monthly inspection. Ensure that DO is complying with all the requirements noted above. Submit copy of compliant DO inspection record.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site ID:	105006
Site Name:	Chevron Station# 97879
Violation Date:	05-07-2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill

CHEVRON STATION# 97879 (Continued) **S123299891**

prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 06/26/2019. Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Records of an Overfill Prevention Equipment Test completed on 8/31/18 were noted during the inspection. The test report shows a failed test result for the overfill prevention equipment, flapper-valve drop tubes, for UST #1 and and UST #3 due to a shutoff level above 95% of tank capacity. The test report also notes that the drop tube at UST#2 could not be removed for inspection and ball floats were not inspected. The drop tube for UST #2 needs to be removed for proper testing per PEI standards and thus test results for UST #2 are not valid. Maintain overfill prevention system to comply with the deficiencies noted above. Repair overfill prevention equipment, flapper valve drop tubes, for UST #1 and UST #3 per the Overfill Prevention Equipment Test completed on 8/31/18. Re-test flapper valve drop tube for UST#2 per CCR Title 23 requi... [TRUNCATED: Refer to full Inspection Report]

CERS:
Name: WALGREENS #9882
Address: 331 N SEPULVEDA BLVD
City,State,Zip: EL SEGUNDO, CA 90245
Site ID: 84384
CERS ID: 10413214
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 84384
Site Name: Walgreens #9882
Violation Date: 10-26-2017
Citation: HSC 6.5 25201(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25201(a)
Violation Description: Failure to obtain a permit or grant of interim status to accumulate hazardous waste longer than 90 days.
Violation Notes: Returned to compliance on 12/06/2017. Dispose of generated ACUTE HAZARDOUS WASTE and submit a copy of the manifest/receipt to the CUPA.
Violation Division: El Segundo City Fire Department
Violation Program: HWLQG
Violation Source: CERS

Site ID: 84384
Site Name: Walgreens #9882
Violation Date: 10-26-2017
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: RCRA Large Quantity Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 12/05/2017. facility needs to provide a valid CUPA Permit for this location
Violation Division: El Segundo City Fire Department
Violation Program: HWLQG
Violation Source: CERS

Site ID: 84384
Site Name: Walgreens #9882
Violation Date: 10-26-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 01/02/2018. Complete and electronically

WALGREENS #9882 (Continued) **S113150919**

submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Include compressed gas helium and propane.

Violation Division: El Segundo City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 84384
Site Name: Walgreens #9882
Violation Date: 10-26-2017
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 12/04/2017. The generator has not obtained an RCRA EPA ID number to manage acute hazardous waste. facility generated in excess of 2.2 lbs of acute HW P listed waste in a single calendar month. Manifest tracking # 009361315FLE, 0099347779, 009211246FLE (2016) dates. Obtain EPA ID # adequate for this facility Submit documentation to the CUPA demonstrating that you have obtained an appropriate EPA ID number for the waste generated at this site.

On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

WALGREENS #9882 (Continued) **1019322491**

Hazardous Waste Summary:

. Waste code: 121
. Waste name: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D009
. Waste name: MERCURY

. Waste code: D010
. Waste name: SELENIUM

. Waste code: P001
. Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

. Waste code: P075
. Waste name: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WALGREENS #9882 (Continued) **1019322491**

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 109

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 15

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 2

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 5

Waste code: D010
Waste name: SELENIUM
Amount (Lbs): 2

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Amount (Lbs): 4

Waste code: P075
Waste name: NICOTINE, & SALTS
Amount (Lbs): 5

Violation Status: No violations found

Date form received by agency: 03/30/1994
Site name: HUGHES AIRCRAFT CO, ELECTRO OPTICAL SYS
Classification: Large Quantity Generator

Date form received by agency: 04/13/1992
Site name: HUGHES ELECTRO OPTICAL DATA SYSTEMS GROU
Classification: Large Quantity Generator

Date form received by agency: 08/18/1980
Site name: RAYTHEON SYSTEMS CO
Classification: Large Quantity Generator

Hazardous Waste Summary:

. Waste code: 121
. Waste name: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 123
. Waste name: Unspecified alkaline solution

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 171
. Waste name: Metal sludge (see 121)

. Waste code: 172
. Waste name: Metal dust (see 121) and machining waste

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 241
. Waste name: Tank bottom waste

. Waste code: 291
. Waste name: Latex waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 512
. Waste name: Other empty containers 30 gallons or more

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 711
. Waste name: Liquids with cyanides > 1000 mg/l

. Waste code: 731
. Waste name: Liquids with polychlorinated biphenyls > 50 mg/l

. Waste code: 741
. Waste name: Liquids with halogenated organic compounds > 1000 mg/l

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D005
. Waste name: BARIUM

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D011
. Waste name: SILVER

. Waste code: D015
. Waste name: TOXAPHENE (C10 H10 CL8, TECHNICAL CHLORINATED CAMPHENE, 67-69 PERCENT CHLORINE)

. Waste code: D018
. Waste name: BENZENE

. Waste code: D022
. Waste name: CHLOROFORM

. Waste code: D027
. Waste name: 1,4-DICHLOROBENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F008
. Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

. Waste code: F027

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste name: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

. Waste code: P015
. Waste name: BERYLLIUM

. Waste code: P030
. Waste name: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

. Waste code: P065
. Waste name: FULMINIC ACID, MERCURY(2+) SALT (R,T) (OR) MERCURY FULMINATE (R,T)

. Waste code: P074
. Waste name: NICKEL CYANIDE (OR) NICKEL CYANIDE NI(CN)2

. Waste code: P098
. Waste name: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

. Waste code: P106
. Waste name: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

. Waste code: P120
. Waste name: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

. Waste code: P122
. Waste name: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 10% (R,T)

. Waste code: U002
. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

. Waste code: U003
. Waste name: ACETONITRILE (I,T)

. Waste code: U019
. Waste name: BENZENE (I,T)

. Waste code: U031
. Waste name: 1-BUTANOL (I) (OR) N-BUTYL ALCOHOL (I)

. Waste code: U035
. Waste name: BENZENEBUTANOIC ACID, 4-[BIS(2-CHLOROETHYL)AMINO]- (OR) CHLORAMBUCIL

. Waste code: U056
. Waste name: BENZENE, HEXAHYDRO- (I) (OR) CYCLOHEXANE (I)

. Waste code: U057
. Waste name: CYCLOHEXANONE (I)

. Waste code: U069
. Waste name: 1,2-BENZENEDICARBOXYLIC ACID, DIBUTYL ESTER (OR) DIBUTYL PHTHALATE

. Waste code: U080
. Waste name: METHANE, DICHLORO- (OR) METHYLENE CHLORIDE

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste code: U115
. Waste name: ETHYLENE OXIDE (I,T) (OR) OXIRANE (I,T)

. Waste code: U122
. Waste name: FORMALDEHYDE

. Waste code: U125
. Waste name: 2-FURANCARBOXALDEHYDE (I) (OR) FURFURAL (I)

. Waste code: U133
. Waste name: HYDRAZINE (R,T)

. Waste code: U134
. Waste name: HYDROFLUORIC ACID (C,T) (OR) HYDROGEN FLUORIDE (C,T)

. Waste code: U140
. Waste name: 1-PROPANOL, 2-METHYL- (I,T) (OR) ISOBUTYL ALCOHOL (I,T)

. Waste code: U144
. Waste name: ACETIC ACID, LEAD(2+) SALT (OR) LEAD ACETATE

. Waste code: U154
. Waste name: METHANOL (I) (OR) METHYL ALCOHOL (I)

. Waste code: U159
. Waste name: 2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)

. Waste code: U161
. Waste name: 4-METHYL-2-PENTANONE (I) (OR) METHYL ISOBUTYL KETONE (I) (OR) PENTANOL, 4-METHYL-

. Waste code: U162
. Waste name: 2-PROPENOIC ACID, 2-METHYL-, METHYL ESTER (I,T) (OR) METHYL METHACRYLATE (I,T)

. Waste code: U163
. Waste name: GUANIDINE, N-METHYL-N'-NITRO-N-NITROSO- (OR) MNNG

. Waste code: U165
. Waste name: NAPHTHALENE

. Waste code: U166
. Waste name: 1,4-NAPHTHALENEDIONE (OR) 1,4-NAPHTHOQUINONE

. Waste code: U169
. Waste name: BENZENE, NITRO- (OR) NITROBENZENE (I,T)

. Waste code: U188
. Waste name: PHENOL

. Waste code: U196
. Waste name: PYRIDINE

. Waste code: U211
. Waste name: CARBON TETRACHLORIDE (OR) METHANE, TETRACHLORO-

. Waste code: U213

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste name: FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)

. Waste code: U216
. Waste name: THALLIUM CHLORIDE TLCL (OR) THALLIUM(I) CHLORIDE

. Waste code: U220
. Waste name: BENZENE, METHYL- (OR) TOLUENE

. Waste code: U223
. Waste name: BENZENE, 1,3-DIISOCYANATOMETHYL- (R,T) (OR) TOLUENE DIISOCYANATE (R,T)

. Waste code: U226
. Waste name: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

. Waste code: U228
. Waste name: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

. Waste code: U238
. Waste name: CARBAMIC ACID, ETHYL ESTER (OR) ETHYL CARBAMATE (URETHANE)

. Waste code: U239
. Waste name: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 10280

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 4410

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 1996

Waste code: D007
Waste name: CHROMIUM

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

Contact email: MANJU.MOHAN@RAYTHEON.COM
EPA Region: 09
Land type: Private
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste
Classification: Large Quantity Generator
Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	Yes
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Universal Waste Summary:

Waste type:	E
Accumulated waste on-site:	No
Generated waste on-site:	Yes

Waste type:	Batteries
Accumulated waste on-site:	Yes
Generated waste on-site:	Not reported

Waste type:	Thermostats
Accumulated waste on-site:	Yes
Generated waste on-site:	Not reported

Hazardous Waste Summary:

. Waste code: 121
. Waste name: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 123
. Waste name: Unspecified alkaline solution

. Waste code: 135
. Waste name: Unspecified aqueous solution

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 171
. Waste name: Metal sludge (see 121)

. Waste code: 172
. Waste name: Metal dust (see 121) and machining waste

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 213
. Waste name: Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: 223
. Waste name: Unspecified oil-containing waste

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste code: 241
. Waste name: Tank bottom waste

. Waste code: 291
. Waste name: Latex waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 512
. Waste name: Other empty containers 30 gallons or more

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 711
. Waste name: Liquids with cyanides > 1000 mg/l

. Waste code: 731
. Waste name: Liquids with polychlorinated biphenyls > 50 mg/l

. Waste code: 741
. Waste name: Liquids with halogenated organic compounds > 1000 mg/l

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: 792
. Waste name: Liquids with pH < 2 with metals

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D003
. Waste name: REACTIVE WASTE

. Waste code: D004
. Waste name: ARSENIC

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste code: D005
. Waste name: BARIUM

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D011
. Waste name: SILVER

. Waste code: D015
. Waste name: TOXAPHENE (C10 H10 CL8, TECHNICAL CHLORINATED CAMPHENE, 67-69 PERCENT CHLORINE)

. Waste code: D018
. Waste name: BENZENE

. Waste code: D022
. Waste name: CHLOROFORM

. Waste code: D027
. Waste name: 1,4-DICHLOROBENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F008
. Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

. Waste code: F027
. Waste name: DISCARDED UNUSED FORMULATIONS CONTAINING TRI-, TETRA-, OR PENTACHLOROPHENOL OR DISCARDED UNUSED FORMULATIONS CONTAINING COMPOUNDS DERIVED FROM THESE CHLOROPHENOLS. (THIS LISTING DOES NOT INCLUDE FORMULATIONS CONTAINING HEXACHLOROPHENE SYNTHESIZED FROM PREPURIFIED 2,4,5-TRICHLOROPHENOL AS THE SOLE COMPONENT.)

. Waste code: P015
. Waste name: BERYLLIUM

. Waste code: P030
. Waste name: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

. Waste code: P065
. Waste name: FULMINIC ACID, MERCURY(2+) SALT (R,T) (OR) MERCURY FULMINATE (R,T)

. Waste code: P074
. Waste name: NICKEL CYANIDE (OR) NICKEL CYANIDE NI(CN)2

. Waste code: P098

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste name: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

. Waste code: P106
. Waste name: SODIUM CYANIDE (OR) SODIUM CYANIDE NA(CN)

. Waste code: P120
. Waste name: VANADIUM OXIDE V2O5 (OR) VANADIUM PENTOXIDE

. Waste code: P122
. Waste name: ZINC PHOSPHIDE ZN3P2, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 10% (R,T)

. Waste code: U002
. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

. Waste code: U003
. Waste name: ACETONITRILE (I,T)

. Waste code: U019
. Waste name: BENZENE (I,T)

. Waste name: BENZENE, METHYL- (OR) TOLUENE

. Waste code: U223
. Waste name: BENZENE, 1,3-DIISOCYANATOMETHYL- (R,T) (OR) TOLUENE DIISOCYANATE (R,T)

. Waste code: U226
. Waste name: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

. Waste code: U228
. Waste name: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

. Waste code: U238

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

. Waste name: CARBAMIC ACID, ETHYL ESTER (OR) ETHYL CARBAMATE (URETHANE)

. Waste code: U239
. Waste name: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 10280

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 4410

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 1996

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 2964

Waste code: D008
Waste name: LEAD
Amount (Lbs): 2110

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 51

Waste code: D011
Waste name: SILVER
Amount (Lbs): 537

Waste code: D018
Waste name: BENZENE
Amount (Lbs): 5

RAYTHEON SPACE AND AIRBORNE SYSTEMS (Continued) **1015732613**

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 1978

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 431

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 12042

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 12042

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-13-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Not reported
Eval Division: El Segundo City Fire Department
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-14-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The facilities SPCC plan has met all requirements under the State's APSA regulations. The plan cold have more details on the training that is given to each type of individual covered under the plan. Also, a description of the training topics covered in the training session would improve the training records. A better way of documenting the approval method for releasing rain water would improve the plan. Raytheon is doing a good job of implementing the plan and keeping all required records.

FINDS:

Registry ID: 110002697323

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 08/30/2018. The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Facility failed to report accurate amount of liquid nitrogen (3000 gallons). Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Facility shall update the liquid nitrogen amounts, delete the nitrogen gas entry, and resubmit hazardous materials inventory.
Violation Division:	El Segundo City Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Evaluation:

Eval General Type:	Compliance Evaluation Inspection

INFINEON TECHNOLOGIES AMERICAS CORP (Continued) **S118596944**

Eval Date:	07-17-2015
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	No outstanding violations
Eval Division:	El Segundo City Fire Department
Eval Program:	HMRRP
Eval Source:	CERS
Eval General Type:	Compliance Evaluation Inspection
Eval Date:	08-28-2018
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	The facility should correct the NFPA placards at the gate entry to upgrade the Health category from a "2" to a "3" to include the liquid nitrogen hazards. The NFPA placard for the liquid nitrogen tank should also be relocated to be visible from the gate.

SAPA ANODIZING INC (Continued) **1004676442**

Registry ID: 110012225797

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 211
. Waste name: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 512
. Waste name: Other empty containers 30 gallons or more

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: D000
. Waste name: Not Defined

TELEDYNE CONTROLS LLC (Continued) **1000241004**

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: D011
. Waste name: SILVER

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

TELEDYNE CONTROLS LLC (Continued) **1000241004**

. Waste code: U223
. Waste name: BENZENE, 1,3-DIISOCYANATOMETHYL- (R,T) (OR) TOLUENE DIISOCYANATE (R,T)

Violation Status: No violations found

FINDS:

Registry ID: 110002697261

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: NEC qualified. No further action required.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-18-2016
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Staff visited and inspected the site in response to a NOT. The company filed NOT because it changed the name from Teledyne Controls Inc. to Teledyne Controls LLC. The former NEC ID number was 4 19NEC001291. Staff met at the site with Mr. Vu Nguyen, Environmental Health and Safety/ Manufacturing Engineer, (310)765-9436. He permitted the inspection and to take photos during the inspection. Also, he accompanied staff during the site inspection. The company assembles electronic parts at the building . The parts are manufactured outside and delivered to this building for assembling and shipping to customers. All the industrial activities are conducted indoors. Outside the building was located only a large empty nitrogen tank and part of a cardboard compactor. The company was very clean and organized. Staff believe that the NEC is appropriate in this case. Photos from the site are attached.
